Special Thanks

The project would like to extend our gratitude and thanks to all those who have worked on the game, and all those who help keep the project running. Translators, Admin's, Moderators, the ACS Teams, Tournament Organizers, and so many more.

A special "Thank You!" to the people helping The 9th Age financially in tough times.

INTRODUCTION

Welcome to the tabletop wargame known as *The 9th Age: Fantasy Battles*, or 'T9A' for short. This is a community crafted miniatures wargame, where grand armies collide in monumental conflicts for supremacy and survival. The game is played on a tabletop with terrain features and miniatures to represent the battlefield and the clashing armies, and it uses six-sided dice and measuring devices to move miniatures and resolve actions such as charging into battle, letting arrows loose, and casting spells.

For all the rules, feedback, and suggestions, please visit our webpage: the-ninth-age.com. The rules presented in this book are considered the Core Rules of T9A and are used in all T9A games.

Licence: [Copyright Creative Commons](#)

Rules representation

In order to keep rules clear and tidy, the following text formatting is used:

Designer notes: Text in a grey box denotes designer notes. In these are the designers giving some insights into intent behind rules, alternate ways to play the game, or shortcuts to speed things up.

- CAPITALIZATION is used for words/phrases that are defined in this book, such as 'Round of Combat', unless they are common words with no elaborate game definition like 'model' or 'unit', but 'Combat' is since it is not used like the common British term.
- **Bold** font or text is used to highlight specific words. It is also used in Army Books to emphasise Model Rules specified in the same unit entry.
- *Italic font marks reminders, examples, clarifications, and other content that are not direct rules.*
- *Grey-coloured* text is used for figure and table captions, item restrictions, repetitive content, and Properties, which is a special type of keyword that doesn't transfer any direct rules.
- [Hyperlinks](#) can be found in the electronic version of this document, and the page footer includes hyperlinks to key sections.
- **Pink text** is unique to the Reference Handbook. This Handbook covers corner-cases and specific circumstances that are not expected to be relevant in the majority of games. The Handbook is a copy of the Illustrated Rulebook with additional sections added to cover these corner-cases.

Rules Documents

Illustrated Rulebook

The Illustrated Rulebook contains a streamlined version of the main rules needed for playing the game, alongside art, miniature images and lore.

Appendices

Appendices are an integral component of the core rules, and are used in most games. There are two appendices to the Illustrated Rulebook:

- **Illustrated Rulebook – Appendix I: Model Rules** – Additional and unique rules that specific models possess.
- **Illustrated Rulebook – Appendix II: Arcane Compendium** – The compendium contains spells from the ten different Paths of Magic, along with the common Magic Items and special Leadership Skills.

Season Pack

This document includes additional Deployment Types, maps, Primary and Secondary Objectives, catering towards more advanced games. Current one can be found here: [Season Pack 2: Legends of the 9th Age](#)

Reference Handbook

This handbook includes all rules from the Illustrated Rulebook, plus Appendix I: Model Rules and Appendix II: Arcane Compendium documents.

Additionally, it includes extended rules text to cover for intricate and complex battlefield situations. We recommend that players who prefer to understand complex situations in advance and fully grasp the nuances of all rule interactions turn directly to this document.

For new players and those who prefer to deal with intricate scenarios as they arise, we suggest starting with the Illustrated Rulebook and only consulting the Reference Handbook when specific situations occur that are not fully covered in the Illustrated Rulebook.

Army Books

The rules for the different armies are found in Army Books. Within these, you will find army composition rules, unit and model rules, characteristics, and so on.

Supplements

Supplements are optional add-ons to the game that require an agreement with the opponent before using.

THE FLOW OF THE GAME

This game is divided into three main sections, performed in order.

- 1 **Battle Preparations.** Before a game, certain preparations are needed.
The players need to put together their armies, prepare the battlefield, agree on Victory Conditions and Deploy their armies.

Game Turns. The 9th Age is a turn-based game played over six Game Turns.

Each **Game Turn** consists of two **Player Turns**. These are made up of a series of **Phases**:

- 2
 - a. Charge Phase
 - b. Movement Phase
 - c. Magic Phase
 - d. Shooting Phase
 - e. Rally Phase
 - f. Melee Phase

- 3 **After the Game.** After both players have played their six Player Turns, it is time to tally up the Victory Points and check who managed to complete the Primary and Secondary Objectives to determine who is the winner of the game.

Active & Reactive Player

The 'Active Player' is the one currently taking their Player Turn, and the 'Reactive Player' is the one whose Player Turn is not currently happening.

Before the first Player Turn, the Defender is the Active Player.

Friendly and Enemy

The terms 'friendly' and 'enemy' are used to distinguish between units, model, spells, and other effects belonging to the same player ('friendly') and units, models, spells, and other effects controlled by the opposing player ('enemy').

Your First Game

Is this your first game? Let's get you started. First, prepare your battlefield: a large flat surface with model terrain on – a pile of books can be a hill, a mug can be a rock, a mouse pad can be a lake, and so on. Then, challenge a friend to a game where you both command your own miniature army.

For a trial run without the commitment of time and resources, we offer downloadable paper cutouts on the T9A website (*Essence of War*).

BATTLE PREPARATIONS

Before battle can be joined, you must establish the nature of the battlefield, the armies that will fight upon it, and their reason for being there. This is a natural part of setting up the game, but it can also represent a commander reviewing their troops and scouting the land in preparation for an important battle.

When preparing to play a game of The 9th Age: Fantasy Battles, players follow a series of steps:

Battle Preparations Table

1. **Pre-game Planning** *usually done before players arrive to the gaming table.*
 - (a) **Decide Army Size**, which determines the scale of the game. This can be done by the players agreeing on an Army Size, or an outside source such as campaign rules or a tournament organiser dictating this.
 - (b) **Build an Army**. Each player creates an Army List from one of the Army Books.
 - (c) **Community Tools** details of gaming aids, in particular the digital army builder **New Recruit**.
2. **Initial Preparations** *these are sometimes done before arrival (typical in a tournament setting).*
 - (a) **Share Army Lists** with your opponent, revealing the units and options you will be using during the game.
 - (b) **Build the Battlefield** by setting up terrain and scenery to create an engaging and challenging environment for the battle.
 - (c) **Determine Deployment Type** – this defines where on the Battlefield the armies can start.
 - (d) **Determine and Setup Victory Conditions** which defines the primary goals for the battle.
3. **Battle Setup** *(these actions are done at the gaming table by both players together)*
 - (a) **Roll-off for Attacker and Defender**: the players each roll a dice, the winner **decides** which player is going to be the Defender; the other will be the Attacker.
 - (b) **Determine Secondary Objectives** if Secondary Objectives are used, determine these now.
 - (c) **Defenders Pre-game Selections** the Defender selects a Deployment Zone, and performs all their Pre-game Selections.
Common selections include targets for Secondary Objectives and Spell Swaps.
 - (d) **Attackers Pre-game Selections** the Attacker performs all their Pre-game Selections.
Common choices include targets for Secondary Objectives and Spell Swaps.
 - (e) **Deploy units**: both players place their units, **starting** with the Attacker, entirely within their Deployment Zones.
 - (f) **Vanguard Units** the Defender gives **Vanguard (3" Mob)** to one of their units and performs the first Vanguard Move with this unit.

Designer notes: The Season Pack's are supplements that gives more depth to battlefields, add several new Deployment Types, Primary Objectives and Secondary Objectives. A new Season Pack is released roughly every second year, to provide updated content and variations on the core rules, without altering the fundamental gameplay, or requiring learning an entirely new game.

Are you looking for a fast and straight forward game, or if this is one of your first games, we recommend you leave the Season Pack until next time.

1 Pre-game Planning

1.A Decide Army Size

Before building an army, players need to agree on the scale of the battle, which corresponds to the chosen 'Army Size'. Armies are then built so that the combined point costs of all their units does not exceed the designated Army Size, and is no less than 50 points below that limit.

Army Size also determines the rules for army composition.

Points Cost

The Points Cost, often shortened 'pts', is a measure of the power of a unit or upgrade. We use points to ensure that two armies with a similar total Points Cost facing each other provide for a fair, balanced game experience.

Every unit has a Points Cost, which is determined by adding its base cost with the cost of additional models added to it, as well as the cost of every additional option selected for that unit.

1.B Build an Army

As the player, it is your duty to command your army on the battlefield, but first you will have to pick one of the different factions available to you. Each Army Book contains a description of the different units that are available to its faction, as well as their Characteristics and special rules.

To build your army, you must write an 'Army List', which details the selection of units, spells and options you want to use, along with their Points Cost. Every unit, weapon, upgrade, and Magic Item has a specific Points Cost, which is used to balance the game and ensure fair play between the players.

Army Books

The rules for playing the various factions are detailed in the Army Books and supplement Army Books (remember that using a supplement requires the agreement of your opponent or event organiser).

Unit Entries

Each entry in an Army Book belongs to a specific 'Army Category', represented by one or several specific icons in the Army Book. Each Army Category has its own Points Cost limit, as defined in the Army Book, determining how many Army Points a player can allocate to that particular category.

This allows players to create a balanced and strategic army composition for their games.

Characters

An army can typically spend up to 40% of its Army Points on characters.

All entries in this Category follow the rules for both Characters and Attachable Models.

Designer notes: Characters are the leaders and exceptional individuals in the army, wielding various skills such as brute force, tactical acumen, spellcasting ability, or engineering knowledge. They play a crucial role in influencing the outcome of battles, and one of them usually serves as the army's General, responsible for leading and inspiring your forces.

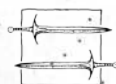

Core

An army must spend a minimum number of Army Points on this category generally 25%.

Designer notes: Core units represent the most readily available warriors in the faction, serving as essential rank-and-file troops under the command of the Characters. They are always present in some combination as part of your fighting force.

Special

This Army Category has no maximum limit. An army can spend any amount of Army Points on units in this Category.

Designer notes: The Special Army Category represents less common and more unique forces that are found in some but not all of your faction's armies. While they might make up the largest portion of your host, the availability of each unit is still limited. They usually fill a range of useful and impactful roles.

Army-Specific

An Army-Specific Category always has a maximum percentage of Army Points that can be spent on it; the limit is defined in the individual Army Books.

Designer notes: Army-Specific Categories introduce additional options and limitations in army building, reflecting the nature of the faction. Army-Specific Categories can include thematic groupings of units, limitations based on specific functions, and the faction's most rare and powerful forces.

Units belonging to more than one Army Category

Some units can be included in more than one Army Category, which is represented by more than one icon in their entry. In these cases, simply count the unit's Points Cost towards the limits of all its Army Categories, but only once towards the army's Points Cost.

Adding Army Categories to a Unit

Choosing certain options can make a unit count towards another Army Category in addition to its original Army Category. For example, giving a unit Shooting Weapons might make it also count towards the 'Ranged Support' Army Category.

This is marked by a small icon of the additional Army Category, displayed underneath the original Army Category icon(s), together with the conditions for counting towards this additional Army Category.

Splitting Point Cost between Army Categories

In a few cases, a unit's Points Cost can be split between different Army Categories, where the Points Cost for some particular option is additionally counted towards a different Army Category than the unit. This is marked in the unit entry by a split icon, with the two halves representing the two Army Categories the unit counts towards.

For example, a 250 pts Elf Character, counted towards the 'Characters' Army Category, decides to ride a 500 pts Dragon, which is an option marked to count additionally towards 'Beasts and Monsters'. In this case, the player must count the entire unit's Points Cost (250 + 500 = 750 pts) towards 'Characters', and the Dragon's Points Cost (500 pts) towards 'Beasts and Monsters'. Of course, only 750 pts are added towards the army's total limit.

Rarity – Restrictions for Units and Items

All units and some options in the army have a limit on the number of times, that they can be included in the army.

- **Max. X items per army:** some items have a number of 'Max. X' allowed per army. *Eg. 'Max. 20 bows', 'Max. 4 models'. This means you can only include a maximum of X instances of each of these items in your army.*
- **Regular:** these Unit Entries are limited to a maximum of 1 per 500 Army Points (rounding fractions up). *(For example, at 4000 Army Points, Regular Unit Entries are restricted to 'Max. 8/army').*
Generally units taken from the 'Core' Army Category are Regular.
- **Ordinary:** these Unit Entries are limited to a maximum of 1 per 750 Army Points (rounding fractions up). *(For example, at 4000 Army Points, Ordinary Unit Entries are restricted to 'Max. 6/army').*
- **Common:** these items are limited to a maximum of 1 per 1000 Army Points (rounding fractions up). *(For example, at 4000 Army Points, Common items are restricted to 'Max. 4/army').*
This is the default limit for all Unit Entries.
- **Uncommon:** these items are limited to a maximum of 1 per 1500 Army Points (rounding fractions up). *(For example, at 4000 Army Points, Uncommon items are restricted to 'Max. 3/army').*
This is the least restrictive limit generally used on magical items and unusual mounts.
- **Rare:** these items are limited to a maximum of 1 per 2500 Army Points (rounding fractions up). *(For example, at 4000 Army Points, Rare items are restricted to 'Max. 2/army').*
Monsters, elite knights and powerful war machines usually follow this limit.
- **Extraordinary:** these items are limited to a maximum of 1 per 5000 Army Points (rounding fractions up). *(For example, at 4000 Army Points, Extraordinary items are restricted to 'Max. 1/army').*
Army defining entries generally follow this limit, such as magical altars, faction unique upgrades and the most ancient of dragons.

- **Legendary:** these items can only ever be taken once per army.
Most magic items, the Battle Standard Bearer and the General follow this limit.
- **Max. X combined items per army:** some combinations of items may be restricted in combination. In these cases this will be detailed in the Army Organisation part of the Army Book.
This is usually units that can have a Character mounted on them, or it is a unit with a shooting and melee variant.
- **Max. X items per unit:** some items have a maximum limitation allowed per unit. This means you can choose to include up to X instances of these items (mounts, upgrades, etc.) for each unit.

If a single model part has multiple items that count against the same limit, it only counts once against this limit using the highest ratio.

I.B.a Spell Selection

Models that can cast spells of any kind are 'Casters'. Casters able to cast Learned Spells are also 'Wizards'.

If a Caster has a choice between spells, or knows any Learned Spells, the chosen spells must be written on the Army List.

Casters know different numbers of spells, and select them as described in their unit entries, except for Wizards, who all follow the same general rules for selecting their Learned Spells:

Each of the following Wizard types must choose a Path of Magic to select spells from.

Which Paths it has access to is specified under each Wizard's unit entry. The selected Path of Magic must be written on the Army List.

Wizards know and select a different number of Learned Spells depending on their type:

- **Wizard Apprentice:** 1 spell, that is the Apprentice Spell (#1).
- **Wizard Adept:** 3 spells chosen from Apprentice Spell and Adept Spells (#1 – #4).
- **Wizard Master:** 5 spells chosen from Apprentice Spell, Adept Spells, and Master Spells (#1 – #6).

The only kind of Wizard that does not select a Path is a **Wizard Conclave (X)**. It instead select spells from the list specified in its Unit Entry.

During Pre-game Selections, Casters may Swap Spells. For details, see '3.C/D Pre-game Selections'.

Designer notes: To save time and space on Army List writing, we recommend that the Wizard level of a model is followed by the Path name with the numbers of the selected spells in brackets.
For example, 'Wizard Adept, Alchemy (2, 3, 4)'.

1.C Community Tools

To help with playing The 9th Age, we have a continually updated list of 'Community Tools'.

These are all found on the T9A Download page and are free to use.

The most popular one at the release of 3.0 (and for a long time before then) is the online army builder tool 'New Recruit', developed by 'Flammy'.

New Recruit is updated directly from the internal 9th Age files, so its point calculations are generally correct and updated with hardly any delay.

All tournament organisers are encouraged to use New Recruit, since the data collected from it are used by our teams to balance the game.

This balancing includes (but is not limited to) determining which units are potentially too popular or remain underused.

You can find it at this address: NewRecruit.eu

All community tools are available for free here: <https://community.the-ninth-age.com/wcf/downloads/#communitysupportmaterial>.

2 Initial Preparations

These steps are often done by the player hosting the game, or by the tournament organiser.

2.A Share Army Lists

After deciding on the scale of the game and writing their Army Lists, the next step is to share Army Lists and all relevant information about the upcoming game.

***Designer notes:** Sharing Army Lists before the game starts allows both players to look up the rules that apply to the units to be involved in the game, so that they understand how those will function and can plan their strategy accordingly, avoiding any unpleasant surprises, and minimising the time spent reading rules while playing.*

2.B Build the Battlefield

While the game is playable on a wide variety of Battlefields of all dimensions, we recommend that the following sizes are adhered to.

This provides a good balance between having enough room to manoeuvre your troops, and not having so much room that hardly any engagements happen.

- **Battlefield Size:** the game is played on a rectangular Battlefield, with two main dimensions:
 - **Short Battlefield Edge:** the main direction along which the two opposing armies face each other. We recommend this to be 48" (roughly 120 cm), regardless of Army Size.
 - **Long Battlefield Edge:** in most Deployment Types, the long Battlefield Edge is the side along which the units of each army is lined up. The bigger the armies are, the longer the Battlefield Edge you need to fit all the units. See the table below for recommendations.
- **Terrain placement:** the terrain on the Battlefield is essential for adding depth and strategic elements to the game. It can represent various features, from simple objects to more significant landmarks. Players have the flexibility to determine the size, type, and number of Terrain Features, as well as their placement. Prebuilt Battlefield maps are available in the *Season Pack*.

Long Battlefield Edge	Short Battlefield Edge	Recommended Army Size
48"	48"	0 – 3499 pts Warband
60"	48"	3500 – 3999 pts Field Army
72"	48"	4000 – 4999 pts Field Army
90"	48"	5000 – 6999 pts Field Army
120"	48"	7000 – 9999 pts Grand Army

2.C Determine Deployment Type

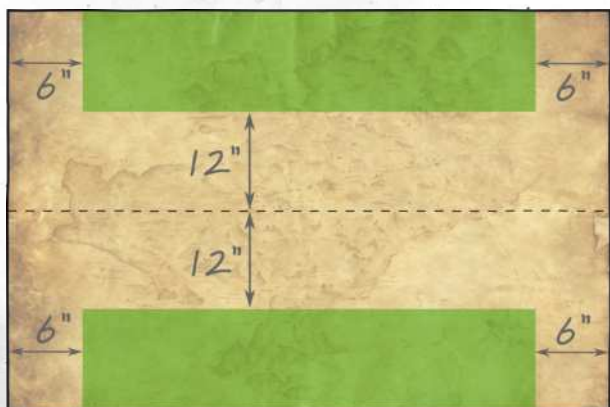

The Deployment Type determines where on the Battlefield the armies can start the game.

Deployment Type is often determined by an outside source, such as a tournament organiser, campaign rules, or the *Season Pack*.

If this your first game use the 'Frontline Clash' Deployment Type:

Frontline Clash

The 'Central Line' is the line drawn through the centre of the Battlefield and parallel to the Long Battlefield Edges. Deployment Zones are more than 12" away from the Central Line, towards your Long Battlefield Edge, and more than 6" from the Short Battlefield Edges.

2.D Determine and Setup Victory Conditions

The Victory Conditions for the game are divided into three parts (see chapter 'After the Game' for their relative importance):

1. Victory Points, representing how much of the opponent's army has been removed as a casualty.
2. A single Primary Objective, that both players compete to win.
3. If using Secondary Objectives, one for each player see the *Season Pack*; if this is your first game, we recommend playing without Secondary Objectives.

If this is your first game or no outside source (e.g. tournament organiser, campaign rule, or *Season Pack*) defines which Primary Objective is played, use 'Hold the Centre' described below.

Scoring Units

Any unit containing a Rank-and-File model that fulfils all the conditions below is a 'Scoring Unit':

- It has a Standard Bearer.
- It does not have **Light Troops**.
- It was not **Summoned** during the game.
- It did not arrive on the Battlefield in Game Turn 6 (e.g. via *Ambush*).

A unit that is **Shaken** (see the 'Psychology' chapter) temporarily stops being **Scoring** until it is no longer **Shaken**.

Primary Objective – Hold the Centre

Setup during Determine and Setup Primary Objective: mark the Battlefield Centre.

Rules: END of Game Turns 3 to 6, the player with the most **Scoring** units within 9" of the Battlefield Centre gains a single Objective Counter.

End of Game Completion: the player with the most Objective Counters wins.

3 Battle setup

From this step the game is played with both players at the gaming table.

3.A Roll-off for Attacker or Defender

After determining Deployment Type and Victory Conditions, both players roll a D6 (a usual 6-sided dice, see 'Dice' in the 'Definitions and Terminology' chapter), rolling again until one player rolls higher.

The player who rolls the highest, **decides** which player will be the Defender; the other player will be the Attacker.

3.B Determine Secondary Objectives

If playing with randomly determined Secondary Objectives, determine them now.

Skip this step if you are not using Secondary Objectives, or if they are pre-determined.

3.C Defender's Pre-game Selections

The Defender selects a Deployment Zone. This determines which side of the battlefield each army will start the game.

During this step the Defender also performs all their 'Pre-game Selections'. Common selections includes selecting Secondary Objective, choosing the targets for the Secondary Objective, and most pre-game army rules.

Some of these selections have significant impact on the opponents selections and Deployment.

3.D Attacker's Pre-game Selections

The Attacker performs all their Pre-game Selections once the Defender has completed their Pre-game Selections.

A common practice is to plan the Attackers Pre-game Selections while the Defender is making their Pre-game Selections. The Attacker should however not reveal their selections until the Defender has announced that they are done with their selections. Likewise the Defender is not allowed to change their Pre-game Selections, once the Attacker starts revealing their Pre-game Selections.

Spell Swapping

A common Pre-game Selection is for Casters to Swap Spells, using these following rules:

1. **Hereditary Swap:** every Wizard **may** replace one of its Learned Spells with the Hereditary Spell from its Army Book.
2. **Universal Swap:** a single Caster in your Army List **may** replace one of its chosen spells with another spell it could have chosen instead.

This does not let a Caster change the Path of Magic initially chosen during Spell Selection as part of Pre-game Planning, if the Caster did not select a Path of Magic, then this is not relevant.

3.E Deploy Units

Starting with the Attacker, players then take turns Deploying their units fully inside their own Deployment Zone.

All units must follow the Unit Spacing rule (see the 'Definitions and Terminology' chapter - 4).

On each of their Deployment Turns, a player can Deploy **any** number of units, and **must** Deploy at least one unit.

Any Attachable Model that wishes to begin the game joined to a unit must be Deployed inside and simultaneously with that unit.

Once a player has Deployed their entire army, that player immediately chooses who has the first Player Turn.

*Note: this 'entire army' criteria does not include units that can, and choose to, be Deployed later during the game (such as units entirely with **Ambush** or **Hidden**).*

Designer notes: Since finishing Deployment first allows you to choose which player has the first Player Turn, a common practice is to Deploy your entire army the first chance you get.

Once your are more comfortable with the game, you will start weighing the strategic benefits from knowing where the opponent's troops are Deployed against the advantage of choosing who has the first Player Turn.

Rules and Abilities of Undeployed Units

Until being Deployed, units cannot perform any actions at all, and all their Magic Items, rules, and abilities not related to their Deployment are ignored, unless explicitly stated otherwise.

Undeployable Units

In the unlikely event that a unit cannot be Deployed during the Deployment Phase for whatever reason (e.g. if there is not enough space in the player's Deployment Zone), it is removed as a casualty, unless specifically stated otherwise.

3.F Perform Vanguard Moves

First, the Defender selects one of their Deployed units containing no Characters: that unit gains **Vanguard (3" Mob)**, and must be the first unit to perform a Vanguard Move.

(Note: a unit that already has Vanguard (3" Mob) can still be selected: the effects are just not cumulative.

If no such unit can be selected, the Defender can select any friendly unit with **Vanguard** to perform the first Vanguard Move).

Then, the players alternate moving their units entirely with Vanguard one by one, until all units that can and want to make a Vanguard Move have done so.

*Remember that per the **Vanguard rule**, no model can move further than 12", or end within 6" of an enemy unit. See 'Model Rules' for further details.*

CHARGE PHASE

In the Charge Phase, your forces will take the initiative, breaking from their ordered manoeuvres to run headlong across the field, with the single purpose of meeting the enemy in Combat. But such Charges are not so simple as they seem; eager troops can hesitate and stumble as the reality of battle approaches, or they might find their target is too far away, allowing the opponent to draw them out of position or rake them with fire before they can reach their ranks.

The Charge Phase is an opportunity for the Active Player to move their units into Combat with enemy units by Declaring Charges.

It is the primary method of engaging in Close Combat.

The Charge Phase is divided into the following steps:

1 Start of the Charge Phase (and Player Turn)

Declare Charges

- a The Active Player chooses one of their units, and Declares a Charge towards an enemy unit.
- b The Reactive Player declares and resolves the target's Charge Reaction.
- c If the target chose the 'Flee!' Charge Reaction, the Reactive Player may attempt to Redirect the Charge.

Repeat steps (a) and (b) (and potentially (c)) with your units, one at a time, until all of your units that wish to and can Declare a Charge have done so.

Moves Charges

- a The Active Player chooses a unit that has Declared a Charge, and rolls its Charge Range roll. If multiple units are charging the same target, make a separate Charge Range roll for every unit Charging the same target.
- b Perform the Charge Move or Failed Charge Move with the unit(s) you just rolled Charge Range for.
- c Repeat step 3 for all units that have Declared a Charge this Phase.

4 End of the Charge Phase.

1 Start of the Charge Phase

Start of the Charge Phase, is also start of player turn. If they have any Active Player performs, any actions that are performed at the start of Player Turn now.

1.A Declaring Charges

To Declare a Charge, select one of your units that has not already Declared a Charge this Phase, and that is not Engaged in Combat or **Shaken**.

Declare which enemy unit it will try to Charge, that fulfil **all** the following conditions:

- The enemy unit must be in **Line of Sight*** of the Charging Unit.
- It must be possible to complete the Charge towards the enemy unit.
*I.e. the enemy unit must be within the Charging Unit's maximum potential Charge Range, and there must be enough room to move the Charging Unit into **Contact***.*

**Line of Sight and Contact are both defined in the 'Definitions and Terminology' chapter.*

Only consider effects affecting the Charging Unit's Charge Range that are present when the Charge is declared.

When determining if there is enough room for the Charging Unit, take into account already declared Charges, including Initial Align Moves of Charging Units.

Do not consider Flee! Charge Reactions, or potential casualties inflicted on the units.

Once a Charge is declared, the unit is considered to be 'Charging' until one of the following occurs:

- It has finished its First Round of Combat after making a Charge Move.
- It performs a Failed Charge Move.
- It is not Engaged in Combat.

1.B Charge Reactions

When a unit has a Charge declared against it, it must **immediately** perform a 'Charge Reaction'.

The owner of the Charged unit declares which Charge Reaction it chooses and resolve the effects immediately.

There are two Charge Reactions:

- **Hold!** This is the default Charge Reaction. Choosing the 'Hold!' Charge Reaction means the unit stands its ground and takes no further action.
*(Note: if this reaction is chosen, some units can perform an out of sequence shooting action - **Stand and Shoot**, see 'Model Rules' for details.)*
- **Flee!** A unit can select this Charge Reaction only once per Phase, and only if not already Engaged in Combat. The unit is pivoted to face directly away from the Centre of the Charging Unit; it then performs a Flee Move (see the '**Psychology**' chapter).
 - Remember that Flee Moves through friendly units cause **Panic Tests**.
 - If this Flee Move brings the fleeing unit into contact with a unit that has Declared a Charge against it this Phase, the fleeing unit is immediately removed as a casualty.

1.C Charge Redirections

If a Charged unit has chosen the 'Flee!' Charge Reaction, after its Flee Move has been completed, the unit(s) that Declared a Charge towards it **may** attempt to Redirect their Charge.

To do so, each unit that has Declared a Charge towards the unit that fled may take a Command Test; a 'Redirect Test' (see the *Psychology* chapter).

If the test is passed, the unit may immediately Declare a new Charge towards another unit (following all the usual restrictions for Declaring Charges).

Each unit can only attempt to Redirect a Charge once per Phase.

2 Charge Moves

After all Charges and Charge Reactions have been declared and resolved, Charging Units will attempt to move into

Combat.

Each unit that Declared a Charge in this Phase now rolls its Charge Range and, if successful, performs a Charge Move.

Roll and move units one by one.

2.A Charge Range

Roll D6+4 and add the unit's Charge Speed (see *'Characteristic Profiles'* in the *'Definitions and Terminology'* chapter).

- If the Charge Range is **equal to or greater** than the distance between the Charging Unit and its intended target (in inches), and if there is enough space to complete the Charge Move (including the Initial Align Move), then the Charge is successful and the Charging Unit performs a Charge Move.
- Otherwise, the Charge is failed: the Charging Unit performs a Failed Charge Move.

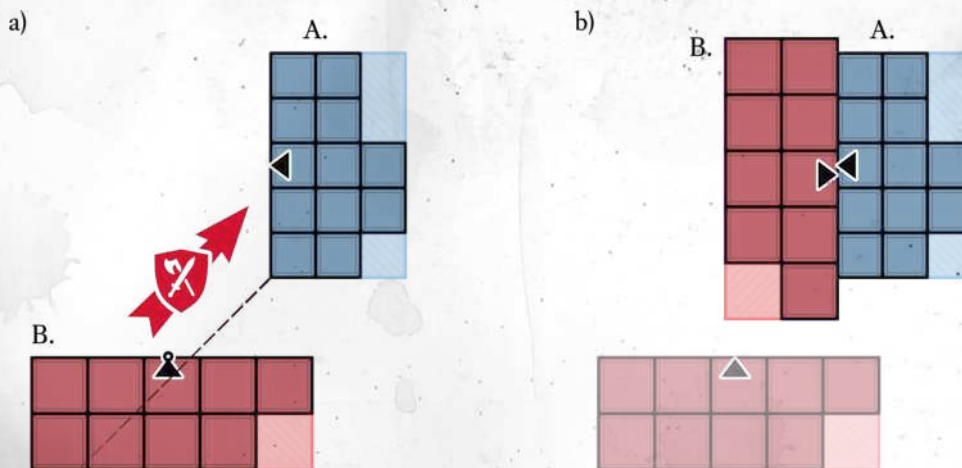

Figure 1: Front or Flank?

a) The centre of Charging Unit B's Front Facing is located in enemy unit A's Front Arc.

b) The Charging Unit must contact the charged unit's Front Facing.

Designer notes: Some players prefer to know their odds when Declaring Charges. Below are the probabilities for the most common cases.

Needed score to	5"	6"	7"	8"	9"	10"
D6+4	100%	83%	67%	50%	33%	17%
Maximised*D6+4	100%	97%	89%	75%	56%	31%

*Maximised rolls are explained in the *'Definitions and Terminology'* chapter.

2.B Charge Move

A Charge Move is divided into two sub-moves: first a 'Snaking Forward Move' to get into contact with the target unit, then an 'Align Move'.

Start with establishing in what Arc of the target unit, that the centre of the Charging Unit's Front Facing is located in (see figure above).

The Facing that corresponds to this Arc is the 'Target Facing'.

See *Definitions and Terminology* chapter for definitions of Arcs and Facings.

A Charge Move is performed using a single Snaking Forward Move (see *Movement Phase - 1.B* chapter for details) with unlimited distance.

During this Snaking Forward Move, the Charging Unit must move into contact with its intended target - The Charging Unit's Front Facing must contact the Target Facing. For this purpose, freeze the width of the Charging unit's Front Facing at the start of the Move until coming into contact with its intended target.

A Charge Move may end within 1" of Impassable Terrain or other units. However, the Charging Unit may not move into contact with any enemy unit, other than the target of the Charge. Once the Charging Unit contacts the Target Facing, it performs an Align Move.

This is done by picking up the Charging Unit and placing it back on the Battlefield aligned with the target unit, in a way that keeps the initial point of contact on the charged unit still in contact, while maximising the number of models in contact.

Apply the following rules when performing Align Moves. The entire Charge Move must be made in such a way that the Charging Unit can satisfy the following conditions as

best as possible, in decreasing order of priority:

1. The initial point of contact* on the *target* unit, before the Align Move, must remain in contact* after the Align Move.

Note that the Charging model that initially made contact is not required to remain in contact.*

- If there is no single initial point of contact*, e.g. because the initial contact* is made along a line, the Charging Unit decides where the initial point of contact* is, among the possible points of initial contact*.

This choice must be made such that the conditions below are satisfied as best as possible.

2. The Charging Unit is fully aligned with its Front Facing flush against the Target Facing.

- If this is not possible, apply the rules for Unaligned Charges (see below).

3. The number of models in the *target* unit that are in contact* with enemy units must be maximised. This includes Fighting Over Gaps.

4. The number of models in the *Charging Unit* that are in contact* with enemy units must be maximised. This includes Fighting Over Gaps.

If it is unavoidable to break one or more of the above conditions, prioritise maintaining the higher priority conditions, even if it means breaking a greater number of conditions in total.

As long as all the above conditions are satisfied to the best extent possible, the Charging Unit is free to choose how it performs the Align Move.

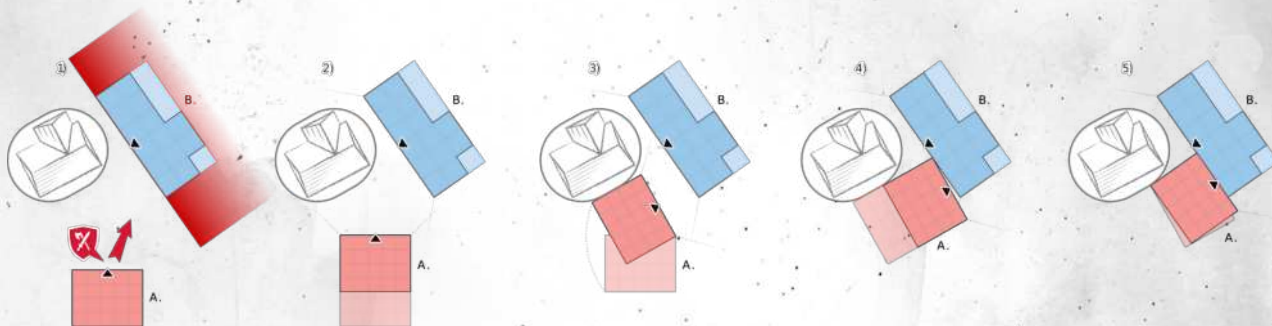

Figure 2: Example of a Charge Move. From left to right.

1. Declare Charge: Unit A Declares a Charge towards unit B.
2. Initial Forward: Unit A moves straight forward.
3. Wheel: The unit is rotated forward around its front right corner.
4. Concluding Forward: Unit A moves forward again, until it contacts unit B.
5. Align: Unit A is picked up and put back down in contact and fully aligned with unit B.

2.C Unaligned Charges

If the Charging Unit cannot perform the Initial Align Move so that it is both fully aligned with the enemy, and the initial point of contact* remains in contact (*Align Move conditions 1 and 2*), the following rules are used instead:

The Charge Move and Align Move(s) must be made in such a way that the initial point of contact on the charged unit, before the Initial Align Move, remains in contact after the Initial Align Move, and such that, at the end of **both** Align Moves, the Charging Unit's Front Facing does not cross over the projected line running parallel with the Target Facing.

Corresponding to the area marked in red in step 1 of Figure 2.

After making sure that the Charge will be possible without breaking the above condition, the Charging Unit must satisfy the conditions below as best as possible, in decreasing order of priority:

1. The initial point of contact on the charged unit, before the Initial Align Move, must remain in contact* after the Initial Align Move.
Note that the Charging model that initially made contact is not required to remain in contact.
2. Minimise the angle between the Front Facing of the Charging Unit and the Target Facing.
3. The number of models in the *target unit* that are in contact* (taking into account those 'Fighting Over Gaps') with enemy units must be maximised.
4. The number of models in the *Charging Unit* that are in contact* (taking into account those 'Fighting Over Gaps') with enemy units must be maximised.

*'Contact' here is referring to 'contact between Unit Boundaries, including Fighting Over Gaps'.

After performing the Initial Align Move with the Charging Unit, the *charged* unit performs a Special Align Move. A unit that is Engaged can never perform a Special Align Move.

It is picked up and rotated around the point of contact, such that the angle between the Charging Unit's Front Facing and the Target Facing is minimised, possibly and ideally fully aligning the units with each other.

Note: Any units not fully aligned must Combat Reform whenever possible. See Melee Phase chapter for details.

2.D Combined Charges

When more than one unit has Declared a Charge towards the same enemy unit, the Charging units are moved in a slightly different order.

1. Roll Charge Range for each unit Charging that same target before moving any of them.
2. Decide the order that the units will be moved, both Charge Moves and Failed Charge Moves. This must be chosen so that the number of units that successfully completes a Charge is as high as possible.
3. Move the units, one by one, following the normal Charge Move rules with the following exceptions:
 - (a) Never apply the rules for Unaligned Charges or Blocked Path.
If it is not possible to place the Charging Unit fully aligned with the enemy, the Charge is not possible.
 - (b) Each individual unit is not required to maximize the number of models in contact (conditions 3 and 4).
The conditions are instead applied at the end of all the Charge Moves.
This means that the total number of models from both sides are maximised after all successful Charges have been resolved.
 - (c) In situations where not all the Charging Units can complete their Charge Move, *e.g. due to other units blocking the path*, such units will instead perform a Failed Charge Move.

2.E Blocked Path

To prevent abusive situations where a unit cannot Charge a nearby unit due to convoluted positioning of enemy units, the following rules are applied.

Blocked Path can only be applied against enemy units that fulfil all of the following criteria:

1. The enemy unit is directly in front of your unit.
This means that the first obstacle (*other unit or Impassable Terrain*) that a straight Forward Move of your unit would hit is an enemy unit.
2. Your unit would be unable to perform a Charge Move to get into contact with the Target Facing of the enemy unit.
3. The Charge is **not** made impossible due to friendly units Engaged with the Target Facing of the enemy unit. (*i.e. Blocked Path is not applicable if the Charge is made impossible due to your own units being Engaged with the Target Facing*)

In this situation, your unit may Declare a Charge towards the enemy unit, and if the enemy does not Flee, use the Facing that is adjacent to the Target Facing and closest to your Charging Unit (*and perform a Charge Move as normal towards this new Target Facing*).

3 Failed Charge Move

A Failed Charge Move occurs when a unit cannot complete its Charge (e.g., due to an insufficient Charge Range, or due to obstacles making it impossible to complete the Charge Move).

The Failed Charge Distance is **always** 4".

If a unit suffers casualties during the Charge Move and therefore no longer can complete the Charge, the unit is also considered to have failed its Charge.

The unit's movement is then backtracked to the position it had when declaring the Charge Move, then it performs a Failed Charge Move.

A Failed Charge Move is done by performing a Snaking Forward Move (see *Manoeuvre Types in the Movement Phase* chapter) with the following adjustments:

- **Initial Forward** move is **always** 0".
(i.e. a Failed Charge Move starts with a Wheel.)
- **Wheel** towards the intended target until one of the following occurs:
 - a. The unit is facing the direction where a forward move would bring the centre of the Charging Unit straight towards the centre of the Target Facing,
 - b. The Wheel is 90 degrees.
 - c. The Wheeled distance is equal to the Failed Charge Distance.
- d. The unit is about to come into contact with another unit or Impassable Terrain.
Stop just before moving into contact.

• **Concluding Forward** move until one of the following occurs:

- a. The unit has moved a total distance (*Wheel + Forward Move*) equal to the Failed Charge Distance (4").
- b. The unit is about to come into contact with another unit or Impassable Terrain. Stop just before moving into contact.

A unit that has performed a Failed Charge Move cannot perform any Move Manoeuvres in the same Player Turn, and it cannot shoot in the next Shooting Phase.

If the target was removed as a casualty, perform the Failed Charge Move towards the last position of the centre of the Target Facing.

Failed Charge Moves are allowed to end the move within 1" of Impassable Terrain or other units, but are not allowed to move into contact. (See *Uncontrolled Move in the 'Definitions and Terminology' chapter*)

4 Engaged in Combat

Once a unit completes a Charge Move, the Charging Unit and the target unit are Engaged in Combat, and remain Engaged in Combat as long as, at least their **Unit Boundaries**, are in contact with an enemy **Unit Boundary**.

MOVEMENT PHASE

Positioning your forces well is the cornerstone of effective military strategy. The Movement Phase is a crucial opportunity to redeploy each of your units to the place where it can do the most good, setting up your attacks, bombardments, feints and cunning ploys to pay off in subsequent phases and turns. Troops in military formation must learn a range of orderly manoeuvres to accomplish such movements as efficiently as possible.

In the Movement Phase, you can move your units one by one in any order. Choose a unit and perform a Move Manoeuvre. Repeat this for all your eligible and willing units.

There are certain restrictions on which units can be moved during the Movement Phase.

The following units are not allowed to move:

- Units that attempted to Charge in the current Player Turn.
- Units that are Engaged in Combat.
- Units that are **Shaken**.
- Units that have arrived on the Battlefield using **Ambush** during the current Player Turn.

1 Manoeuvres Types

Manoeuvre Types are different actions that can be made as part of other moves.

For example, a 'Snaking Forward Move' is used during Charge, Advance and March Moves, while 'Pivots' are made during Advance Moves and Post-Combat Pivots.

1.A Pivot

When performing a Pivot, first mark the Centre of the unit. Then temporarily remove the unit from the Battlefield, and place it back facing any direction, while keeping its Centre in the same position as before.

Models may be repositioned within the unit, as long as the number of files does not change.

No single model can be moved further than twice its Mobility (see 'Characteristic Profiles' in the 'Definitions and Terminology' chapter) from its starting to its ending position.

Check by measuring the direct path of the centre of each model's base.

1.B Snaking Forward Move

A 'Snaking Forward Move' is broken down into three optional actions, which are carried out in this order:

- 1 **Initial Forward Move:** the unit moves straight forward.
- 2 **Wheel:** the unit is rotated forward around one of its front corners, up to 90 degrees.
- 3 **Concluding Forward Move:** the unit moves straight forward.

Most Snaking Forward Moves have a limit to the distance the unit can move.

To determine the distance moved, add the distance used for each action to a total:

- For Forward Moves (*steps 1 and 3*), the moved distance is the distance the unit moves forward.
- The distance used for the Wheel (*step 2*) is the distance the outer front corner is moving in the unit's straight forward direction (*see Figure 3*).

This total cannot exceed the maximum Snaking Forward Move distance, determined by the Move Manoeuvre performed.

At the start of every Snaking Forward Move, before moving the unit at all, the unit is collapsed into a line - its Front Facing.

Every part of the unit behind this line moves straight forward until they meet the Front Facing.

The unit then moves forward as this single line.

Note that the models still have a width (but no depth), equal to the width of their base; and that this move can cause Dangerous Terrain Tests, if used during a move type that triggers Dangerous Terrain Tests, such as a Charge or March Moves.

When the unit reaches its final position at the end of all Snaking Forward Moves, it expands to regain its depth again. This is done by having the rear parts of the unit move straight back from the Front Facing, until they reach their original position within the unit formation and/or a Viable Formation is achieved.

Most Snaking Forward Moves have a limit to the distance the unit can move.

Add the distance used for each action to a total.

This total cannot exceed the maximum Snaking Forward Move distance.

For Forward Moves (*steps 1 and 3*), the moved distance is the distance the unit moves forward.

The distance used for the Wheel (*step 2*) is the distance the outer front corner is moving in the unit's straight forward direction (*see Figure 3*).

Only consider the unit's Front Facing during the entire Manoeuvre (e.g. for the *Unit Spacing* rule) until after the Manoeuvre is completed, where the whole Unit Boundary is again taken into account (i.e. the unit must abide by the *Unit Spacing* rule at its final position).

If the Snaking Forward Move is made as part of a Charge Move, the Manoeuvre also includes the *Initial Align Move* (i.e. only consider the Front Facing until after the Initial Align Move has been completed).

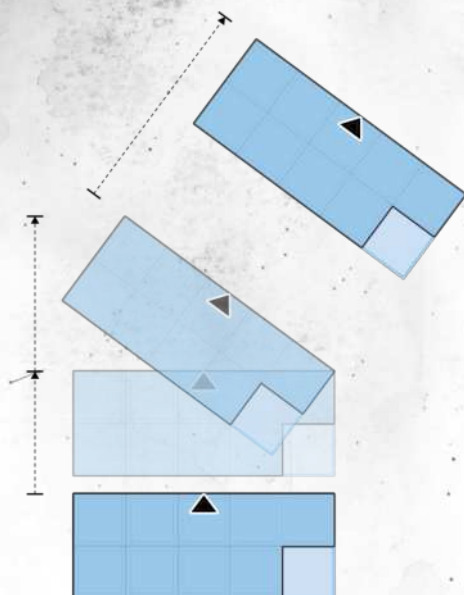

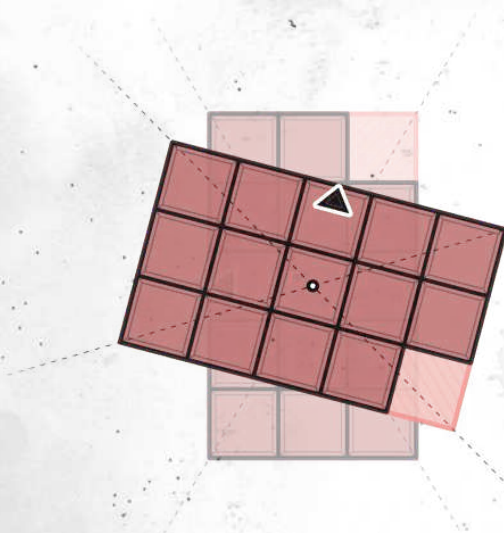

Figure 3: Snaking Forward Move

Designer notes: Simplified Snaking Forward Move

When executing a Snaking Forward Move, you can quickly check possible moves by using a measuring stick that has the same length as the width of the unit. Place this stick parallel with the unit's Front Facing, then move the stick using the Snaking Forward Move rules. This stick represents the Front Facing of the unit.

- If you are not happy with the end position, put this stick back along the Front Facing of the unit and try again.
- Once you are happy with the position, leave the stick in its place and now move the unit to this position, aligning its Front Facing with the measuring stick.

A

B

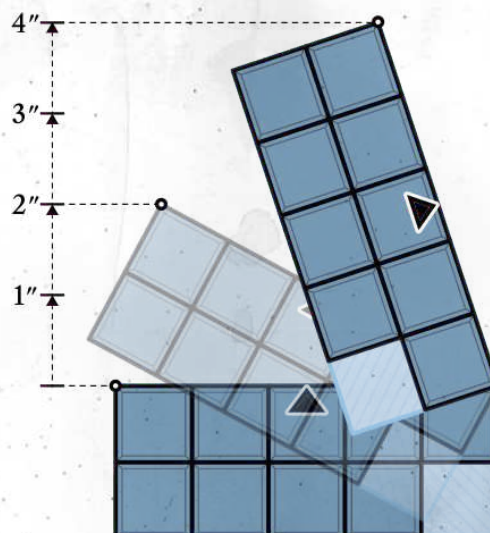

Figure 4: Example of Wheeling and Pivoting

A. Example of a Pivot. The unit is rotated around its Centre. During this rotation, the unit is removed from the table, and then placed back facing a new direction. When measuring a Pivot, it's recommended that you start off by marking the Centre of the unit. You can do this without moving the unit, by placing four markers around it, such that they form a cross with its centre under the unit's Centre. Then remove the unit and place it back, with its Centre again on the centre of the marked cross.

B. Example of a Wheel. The unit is rotated forward, around one of its front corners. The distance the unit is considered to have travelled is equal to the distance the unit's outer front corner has moved in the straight forward direction, indicated by the red line in the figure. The example Wheel moved 4". When measuring a Wheel, it is recommended to place a measuring stick next to the unit and aligned towards the unit's forward direction. Then wheel the unit to the wanted position, and then read off the distance from the measuring stick by checking how far the front corner moved, as indicated by the dotted line in the figure above.

2 Move Manoeuvres

There are three different Move Manoeuvres. When a unit moves in the Movement Phase, it must select which Move Manoeuvre it will perform:

- **Advance Move**
- **March Move**
- **Reform Move**

Remember that since you are allowed to perform any measurements at any time, it is possible to test a Move Manoeuvre, realise it was not a great idea, and then immediately backtrack and perform a different Move Manoeuvre, unless random events or decisions by the opponent have happened that could influence the decision.

It is also customary to mark the starting position, so that backtracking can be done accurately.

Designer notes: **Reform Moves** allow units to tactically adjust their arrangement on the field, granting them the strategic edge to adapt to new challenges during battle. This controlled shift is used to optimise positioning, formation and facing, while staying mostly in the same spot.

Advance Moves provide units with the freedom to manoeuvre on the battlefield, making it a versatile choice for repositioning when preparing to engage with the enemy.

March Moves are the fastest but least flexible movement option available to units. It allows them to move quickly in a forward direction.

Mid-Move Actions

If, for any reasons, the unit's or an individual model's position is relevant in the middle of an ongoing Move Manoeuvre (such as when performing a **Sweeping Attack** or taking a **Dangerous Terrain Test**), the position of the unit is considered as follows:

- The unit must be placed in a viable formation adhering to the Unit Spacing rule (0.5") at the point where it becomes relevant, before continuing the move. If it cannot be placed, the move cannot be performed.
Note: During a Snaking Forward Move you still only consider the Front Facing of the moving unit. Each model in a file being represented by the Front Facing of the first model in the file.
- When measuring the distance each model moves during a Reform Move, measure from its starting position, to the position it is placed mid-move, and then to its final position.

Panic During Moves

If a unit has to take a **Panic Test** during any kind of move, do not take this test until the end of the move.

Valid Final Position

For the final position of the unit to be considered valid, regardless of which Move Manoeuvre was performed, the following condition must be met.

If not, the Move Manoeuvre cannot be performed.

- Each corner of the unit's end position must be within twice its Mobility value ($2 \times \text{Mob}$ inches) of at least one corner's starting position.

*Note that this does **not** mean that each corner must be within $2 \times \text{Mob}$ inches of its own starting position.*

For simplicity, measure the corner that is furthest away from the starting position, and check by measuring its distance to the starting position of the closest corner.

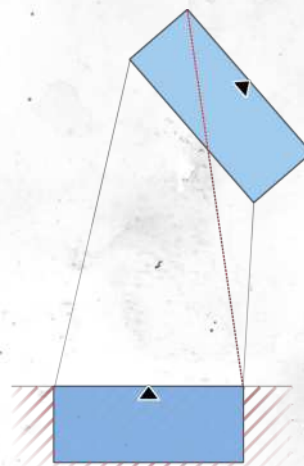

Figure 5: Example of how to measure Valid Final Position

The unit Moves Forward and Wheels to face right.

When reaching the end position, make sure that the corner that travelled furthest is still within $2 \times \text{Mob}$ of at least one of the corners of the unit's starting position (marked in red dashed lines in the figure).

2.A Advance Move

When performing an Advance Move, execute the following actions in the order given below:

- 1 **Pivot:** the Advance Move is initiated with a Pivot. At the end of this Pivot, the unit must follow the Unit Spacing rule.
Note that since this is during a move, the unit normally just need to be outside 0.5" of other units.
- 2 **Snaking Forward Move (Mob):** after the Pivot, the unit may do any number of Snaking Forward Moves, with a total distance up to its Mobility (in inches).
While performing these Snaking Forward Moves, the direction the unit is facing must stay within 90 degrees (in either direction) from the direction it was facing after the Pivot.
- 3 **Reorder:** models may be repositioned within the unit, as long as the number of files does not change.

2.B March Move

When performing a March Move, execute the following actions in the order given below:

1. **Snaking Forward Move (2×Mob):** the unit may do any number of Snaking Forward Moves, with a total distance up to twice its Mobility (*in inches*). While performing these Snaking Forward Moves, the direction the unit is facing must stay within 90 degrees (in either direction) from the direction it was facing before the March Move.
2. **Reorder:** models may be repositioned within the unit, as long as the number of files does not change.

2.C Reform Move

To do a Reform Move, pick the unit up from the battlefield and put it back with the following restrictions:

- The Centre of the unit cannot travel further than half the unit's Mobility (*in inches*).
- The formation of the unit may change, but the number of Files cannot change by more than ± 1 .
Note: Generally no unit can voluntarily have more ranks than files, see 'Models and Units' in the 'Definitions and Terminology' chapter.
- Each model is considered to have moved from its starting position to its end position, around Obstructions where needed; no single model can move further than twice its Mobility.

When measuring each model's move, it is considered to move independently of its unit.

While moving:

- Models are treated as their own unit in regard to the Unit Spacing rule.
- Can ignore other models from the same unit, but not from other units.
- Cannot move further than twice its Mobility (*in inches*).

To move a model you:

1. Pivot the model
2. Perform a Snaking Forward Move

Repeat steps 1 and 2 in any combination and as many times as needed.

At the end of this move, all models come back together again into a viable formation, as described above. Then check for Valid Final Position.

Designer notes: Simplified Reform Move

In practice, for the vast majority of Reform and Advance Moves, there is no need to consider the movements of individual models.

The upper image shows the technical way to perform a Reform Move: moving models one by one (grey dotted lines), and measuring distance the centre of each model moved (black dotted line).

The lower image show a simplified method to perform a Reform Move: move the unit as a whole, potentially readjusting formation by adding or removing files. Measure the distance moved by the Centre of the unit, while making sure that no single model moves further than twice its Mobility (this can typically be checked by measuring the distance travelled by the models that have moved the furthest).

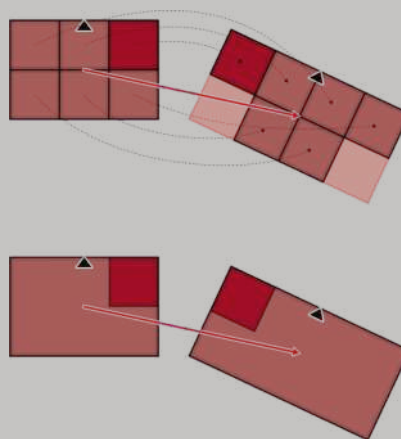

Figure 6: Example of Reform Move

MAGIC PHASE

In the Magic Phase, your Wizards will summon the magic swirling across the battlefield and use it to cast spells that blast the enemy or bolster your own forces – while your opponent tries to stop you.

The Magic Phase is divided into the following steps:

- 1 **Draw Flux Card**
- 2 **Siphon the Veil**
- 3 **Store Magic Dice**
- 4 **Apply Excess Magic**

- 5 **Casting and Dispelling Spells:** the Active Player attempts to cast a spell with one of their models; the Reactive Player may attempt to Dispel it.

Repeat step 5 for each spell you want to cast, or until out of Magic Dice.

1 Magic Dice and Flux Cards

In the Magic Phase, players use Magic Dice for casting and dispelling spells. Each player receives a number of Magic Dice that can be used for the duration of this Magic Phase. Once a Magic Dice is used, it is discarded. At the end of the phase, any unused Magic Dice are discarded (except if stored, see 'Storing Magic' below.).

Flux Cards

Each player has a deck consisting of the 8 Flux Cards selected from the list of 16 cards below. Which cards are used depends on the Army Size.

For example, when playing at 'Field Armies' Army Size, use Flux Cards V–XII. Flux Cards for printing can be found in the Arcane Compendium.

During step 1 of the Magic Phase, randomly draw one of

the Flux Cards from the Active Player's deck. This card determines how many starting Magic Dice both players receive in this Magic Phase. Once a Flux Card has been drawn, it is discarded from the deck.

The remaining Flux Cards in both decks are open information to both players.

2 Siphon the Veil

The Active Player gains additional Magic Dice from the following sources:

- One free additional Magic Dice.
- Magic Dice from models with **Channel**.
- Magic Dice stored from the previous phase (see 'Storing Magic').

Note: each non-Shaken model with Channel (X) adds X Magic Dice. The most common source of Channel are Wizards:

- **Wizard Adepts** have **Channel (1)**.
- **Wizard Masters** have **Channel (2)**.
- **Wizard Conclaves** have **Channel (1)**, unless it is a **Wizard Conclave (1)**.

3 Storing Magic

After 'Siphon the Veil' and before 'Excess Magic', the Active Player may discard one Magic Dice.

If so, they gain one Magic Dice during the 'Siphon the Veil' step of their next Magic Phase.

Warbands	Warbands and Field Armies	Field Armies and Grand Armies	Grand Armies
Card I Both Players gain 4 Magic Dice	Card V Both Players gain 4 Magic Dice	Card IX Both Players gain 5 Magic Dice	Card XIII Both Players gain 6 Magic Dice
Card II Both Players gain 4 Magic Dice	Card VI Both Players gain 5 Magic Dice	Card X Both Players gain 5 Magic Dice	Card XIV Both Players gain 7 Magic Dice
Card III Both Players gain 5 Magic Dice	Card VII Both Players gain 6 Magic Dice	Card XI Both Players gain 6 Magic Dice	Card XV Both Players gain 8 Magic Dice
Card IV Both Players gain 6 Magic Dice	Card VIII Both Players gain 6 Magic Dice	Card XII Both Players gain 7 Magic Dice	Card XVI Both Players gain 8 Magic Dice

4 Excess Magic

After both 'Siphon the Veil' and 'Storing Magic', if a player has more than twice the number of Magic Dice in his pool than the number gained from the Flux Card, the player must discard each Magic Dice over this limit.

For example, Flux Card XI grants 6 Magic Dice: it sets the Excess Magic limit to a maximum of 12 Magic Dice.

5 Spells

Spells are divided into two broad categories:

- **Learned Spells:** the most common type, these are cast using the full power of the magic flowing from beyond the Veil.
- **Bound Spells:** 'bound' into an object or creature, they are more stable than Learned spells, since their use requires only a minimum quantity of ambient magic. These are cast by all manner of creatures, as well as some Wizards.

Most spells belong to a specific Path of Magic (*see the Arcane Compendium*), or are a Hereditary Spell unique to each Army Book.

5.A Casting Spells

Each of the Active Player's models with one or more spells can attempt to cast each spell up to once per Magic Phase. (*Remember that Shaken models cannot cast spells.*) The sequence for casting a spell is as follows:

Casting Roll – Active Player

1 **Caster and target:** declare which model is casting what spell, and choose a target (or targets) for the spell (*for details, see 'Spell Types' in the Arcane Compendium*).

2 **Spend Magic Dice to cast:** declare how many Magic Dice are spent on the Casting Roll (at least 2 Magic Dice must be used, and at most 5 Magic Dice can be used).

3 **Roll Dice:** roll the Magic Dice used for the Casting Roll, and add the results together. If the total is *equal to or above the spell's Casting Value*, the casting is successful. Otherwise, the Casting Roll failed: go directly to step 7.

- **Fizzle:** if one or more '1' was rolled, *and* the Casting Roll was not successful, each dice that rolled a '1' is added back to the Magic Dice pool.
- **Miscast:** if three or more Magic Dice used for the Casting Roll gave an identical result, *and* the Casting Roll is successful, *and* the spell is not dispelled, a Miscast occurs. Consult the Miscast Table for further instructions.

Dispelling Roll - Reactive Player

4 **Spend Magic Dice to dispel:** the Reactive Player may try to dispel the spell. If not, go directly to step 6. If the Reactive Player chooses to try to dispel, they declare how many Magic Dice are spent on the Dispelling Roll. *No limitations apply to the number of Magic Dice used on a Dispelling Roll.*

5 **Dispelling Roll:** roll the Magic Dice used for the Dispelling Roll, and add the results together. If the total is *equal to or above the Casting Roll*, the dispel is successful: proceed to step 7. Otherwise, the Dispelling Roll failed: proceed to step 6.

- **Fizzle:** if one or more '1' was rolled, *and* the Dispelling Roll was not successful, each dice that rolled a '1' is added back to the Magic Dice pool.

Resolving the spell effect

6 **Spell effects:** if the Casting Roll was successful, and the spell was not dispelled, it is successfully cast. Apply the spell effects.

Spell effects are never affected by any effects affecting the Caster, including Magic Items, Model Rules, other spell effects, or similar abilities, unless specifically stated otherwise.

Removing the Caster of a spell as a casualty does not affect the spell's duration.

7 **Miscast:** if the spell is not dispelled while a Miscast occurred, resolve the Miscast now. Consult the Miscast Table for further instructions.

8 **Next casting attempt:** afterward, the Active Player may attempt to cast other spells, provided they have enough Magic Dice left.

5.B Casting Multiple Instances of the Same Spell

Each Caster may only try to cast each of its Learned Spells once per Magic Phase, and may try to cast a Bound Spell once for every instance of that spell it has. If multiple Casters know the same spell, all of them may try to cast their instance(s) of the spell.

When attempting to cast a Learned Spell when a casting attempt (*successful or not*) has already been made for another instance of the same spell (either Bound or Learned); then the Casting Roll is reduced by -3, and by another -3 for each additional attempt in the same phase. *For example, if two casting attempts have already been made for different instances of the same spell, any third attempt to cast it will suffer a -6 penalty to its Casting Roll.*

If the additional casting attempt is made for a Bound Spell version of the same spell, the Casting Roll is only reduced by -1, instead of by -3, for each previous casting attempt for a version of the same spell.

Remember that Replicable Spells ignore this penalty to multiple casting attempts.

5.C Bound Spells

Casting and dispelling Bound Spells follow the normal procedure for casting a Learned Spell, with the following exceptions:

- Bound Spells have their own Casting Values, defined in the brackets following 'Bound Spell'.
- When trying to cast a Bound Spell, one Magic Dice is a D6, the rest are D3. *For example, if casting a Bound Spell using 3 Magic Dice, roll 1D6 and 2D3.*
- A rolled D3 can never Fizzle.
- Bound Spells can never Miscast.

When casting a Bound Spell version of a spell for which a casting attempt was already made in the same Magic Phase, the Casting Roll is decreased only by -1 (instead of by -3).

Note: when attempting to cast a Learned Spell version of a Bound Spell for which a casting attempt was already made in the same Magic Phase, the Casting Roll is still decreased by -3. This penalty is ignored if the spell is Replicable.

Designer notes: Bound Spells are designed to offer low-resource and low-risk casting opportunities to the players. They typically require fewer dice for casting and never cause Miscasts. However, they are also easier to dispel. As a result, Bound Spells are the perfect tool when the opponent is out of Magic Dice for dispelling. When casting Bound Spells, it is important to clearly differentiate the D6s and the D3s. Announce to the opponent how you roll your dice, and either roll them separately, use differently coloured dice, or use dedicated D3-only dice.

6 Miscast Table

A Casting Roll for a Learned Spell can result in a Miscast, if **all** the following conditions are met:

- A. The **Casting Value** is met,
- B. The spell is **successfully cast** and is **not dispelled**, and
- C. **Three-of-a-Kind:** three or more Magic Dice show the same result.

The effect of a Miscast depends on the Casting Roll. Apply all results equal to and below the Casting Roll (including modifiers) from the Miscast Table. Resolve the effects one at a time, starting from the top.

Roll

Miscast Table

Resolve one effect at a time, starting from the top.

All Weaken the Veil

Any further Miscast this Player Turn counts as having a Casting Roll with a value of +5. This effect is cumulative.

10+ Witchfire

The Caster's unit suffers a number of hits equal to twice the number of (Magical Dice used), with Str 3, AP 2, and **Magical Attacks**.

15+ Magical Mishap

Controlled by the opponent, the Caster casts the Apprentice Spell (#1) from the Path* of the Miscast spell, with the following changes:

- Treat the miscasting model as if it was owned by the Reactive Player (*i.e. the opponent chooses the target, makes relevant choices for the spell, any spell with the Augment Type can target the opponent's models, and so on*).
- Ignore any Range, Line of Sight and the Spell Type "Missile" restrictions*.
- The spell is immediately successfully cast, and cannot be dispelled.
- It does not count as a "Casting Attempt", nor as a "Successful Casting".
- A spell cast by Magic Mishap can never cause a Panic Test.

*If the Miscast spell is not from a Path of Magic, use instead the Path that the Miscasting model currently knows the highest number of Learned Spells from (in case of a tie, pick one at random). If the model knows no Learned Spells belonging to any Path of Magic, ignore **Magical Mishap** and apply **Amnesia** instead.

*If there is no viable target, not even the casting Wizards Unit, **Magical Mishap** has no effect.

20+ Amnesia

The Caster cannot cast this Learned Spell again. Duration: Permanent.

25+ Breach in the Veil

All units within 12" of the Caster must immediately take a Dangerous Terrain Test (6+). The Caster is then removed as a casualty.

SHOOTING PHASE

There are many kinds of 'shooting' used by the armies of the 9th Age, from bows, guns and thrown weapons to arcane devices and grand artillery machines. With the exception of magical spells, the Shooting Phase is your chance to unleash all of your ranged attacks at the foe, thinning their forces without the risks of close melee. But of course the enemy may not make it easy, taking cover behind any battlefield shelter they can find to foil your attempts at a clear shot.

The Shooting Phase consists of the following steps:

- 1 Choose one of your units and perform a Shooting Attack with it.
- 2 Select the target of the attack and which models in the unit will shoot. Each model must have Line of Sight to at least one model in the Target unit and be within its effective range.
- 3 Resolve the Shooting Attack.
- 4 Repeat steps 1 to 3 with a different unit that has not yet performed a Shooting Attack during this phase, if desired.

When all units that can and want to shoot have done so, the Shooting Phase ends.

1 Choose a unit and a target

During the Shooting Phase, units containing Shooting Weapons or relevant Model Rules can perform Shooting Attacks.

Select a friendly unit as the Shooting unit and an enemy unit as the Target unit (for further details, see *'Allocating Attacks'* in the *'Attacks'* chapter).

- Shooting unit: to be eligible to shoot, a unit must not:
 - Be **Shaken**,
 - Be **Engaged in Combat**,
 - Have performed a Failed Charge Move this Player Turn,
 - Have made a March Move this Player Turn (unless it has **March and Shoot**), or
 - Already used its Shooting Attack this Player Turn.
- Target unit: to be eligible to be shot at, a unit must:
 - Be within the Shooting unit's **Line of Sight**, and
 - Not be **Engaged in Combat**.

Target Facing

When checking Line of Sight from a Shooting model to the target, also simultaneously check which Facing is the Target Facing.

This is done by establishing in which Arc of the Target unit the centre of the Front Facing of the Shooting unit's is located in: the corresponding Facing is referred to as *'Target Facing'* (i.e. it is determined in the same way as for Charging).

2 Who can shoot?

Normally, only models in the first and second rank can shoot.

If different models in the unit have different types of Shooting Attacks, declare which one is used for each model. Each model can use their own Shooting Attacks.

Determine which models in the Shooting unit can shoot:

- The model must be able to draw Line of Sight to at least one model in the Target unit.
- The model must have the target Health Pool within the Range of its Shooting Attack: measure this from each model in the unit to the closest point of the Target unit's Boundary. Models that are outside their weapon's Range cannot shoot.
- All models in the Shooting unit must shoot at the same Target unit, but may, when possible, allocate their attacks towards different Health Pools within the targeted unit (see *'Allocating Attacks'* for rules on when Attachable Models joined to units may be chosen as the target).
- Any model part in the unit can choose not to shoot.

3 Shots and Aim

Once the models that will shoot are established, they each make as many shots as indicated in their weapon's profile. Roll to hit by rolling a D6 for each shot and compare its result to the weapon's Aim (written in brackets after the weapon's name). For example, a dwarf warrior has *Throwing Weapons (5)* with Shots 2. When this model shoots, roll two D6: each roll of 5+ is a successful hit.

For each hit, follow the Attack Sequence to determine the damage (see the *'Attacks'* chapter).

3.A To-Hit Modifiers

The to-hit roll of a Shooting Attack can be modified, affecting the chance of scoring a successful hit. If the modifier brings the needed score to 7+ or beyond, the attack cannot hit, and a roll of '1' is always considered a miss.

Apply the following modifiers to the to-hit roll:

- **Long Range (-1):** if the target is more than half the weapon's maximum Range away from the Shooting model, apply a -1 to-hit modifier.
 - **Accurate:** if the Shooting model part or its weapon has **Accurate**, ignore the modifier for 'Long Range'.
- **Moving and Shooting (-1):** if the Shooting model's unit has performed a **Move Manoeuvre** (Advance, March or Reform) in this Player Turn, apply a -1 to-hit modifier.
 - **Quick to Fire:** if the Shooting model part or its weapon has **Quick to Fire**, it does not suffer the normal -1 to-hit penalty for 'Moving and Shooting'.
 - **Only model parts with **March and Shoot** (or using a weapon with that rule) can shoot after having Marched in the same Player Turn. If they do, the -1 to-hit modifier for 'Moving and Shooting' applies.*
 - **Unwieldy (-X):** if the Shooting model part or its weapon has **Unwieldy** and has performed a Move Manoeuvre during the same Player Turn, apply an additional -X to-hit modifier.
- **Cover:** the target could benefit from either Soft Cover or Hard Cover:
 - **Soft Cover (-1):** if the target benefits from Soft Cover, apply a -1 to-hit modifier.
 - **Hard Cover (-2):** if the target benefits from Hard Cover, apply a -2 to-hit modifier.
- **Hard Target (X):** if the Target unit has **Hard Target**, apply a -X to-hit modifier.

**See 'Model Rules' for the full rules.*

3.B Cover

For each model that is shooting, check if the target benefits from Cover by drawing three straight lines from the Shooting model to the target.

These lines all start from the same point on the Shooting model's base, as was used checking Line of Sight to the target.

- One line is drawn to the right corner of the Target Facing.
- One line is drawn to the left corner of the Target Facing.
- One line is drawn to the centre of the Target Facing.

If *two or more* of these lines pass through Obstructions that contribute to Cover (*both Soft or Hard*), the target benefits from Soft Cover. If at least two of these lines pass through Obstructions that contribute to Hard Cover, apply instead the rules for Hard Cover.

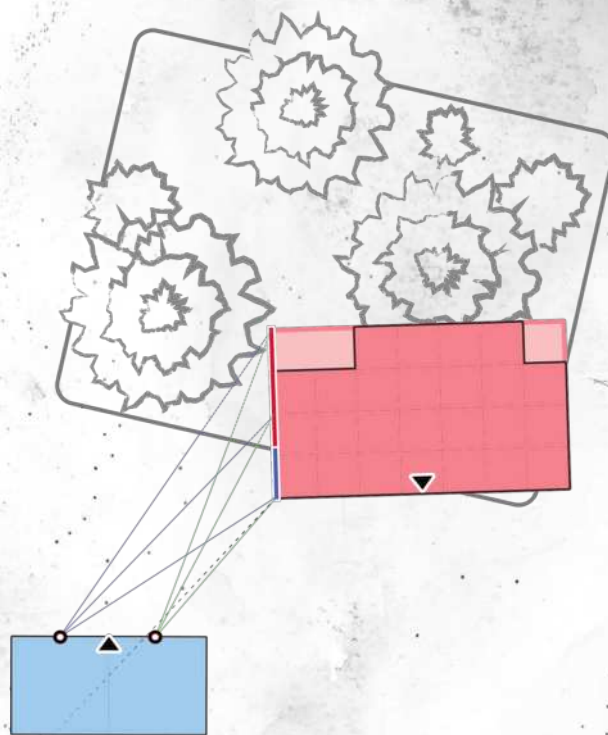

Figure 7: Example of Cover in the Terrain Feature.

The centre of the blue unit's Front Facing is located in the red unit's Flank Arc: the Flank Facing is the Target Facing.

Two of three of the drawn lines pass through a Forest: the red unit benefits from Soft Cover.

Obstructions that Contribute to Cover

There are two types of Cover: Soft and Hard. The most common reason for applying Cover is the target being obscured by Terrain or other models, or the target being inside a Terrain Feature.

The following Obstructions contribute to Cover:

Soft Cover

- Terrain that is **Covering Terrain*** and that contributes to Soft Cover*.
- Models that have *equal or larger Height than either* the shooter or the target*.

Hard Cover

- Terrain that is **Opaque Terrain**
- Terrain that is **Covering Terrain*** and that contributes to Hard Cover.
- Models that have *equal or larger Height than both* the shooter and the target*.

**See the 'Terrain' chapter for details.*

**Note that models that have a smaller Height than both the shooter and the target do not contribute to Cover.*

RALLY PHASE

1 Rally Test

During the Rally Phase, the Active Player's **Shaken** units must take a **Command Test**, called a 'Rally Test'. Roll tests one by one in any order.

Units Engaged in Combat cannot take Rally Tests.

- If the Rally Test is *passed*, the unit stops being **Shaken** and may immediately make a Pivot (see the '**Movement Phase**' chapter).
- If the Rally Test is *failed*, the unit Pivots to face directly away from the centre of the closest non-**Shaken** enemy unit, and then performs a Flee Move (see the '**Psychology**' chapter).

Remember that if a unit **initiates** a Flee Move whilst **Decimated**, it is removed as a casualty.

MELEE PHASE

Some say that battles are won or lost by preparation or sound strategies, but ultimately every fight will come down to the clash of weapons in close quarters. The Melee Phase is the time for your forces to put their mettle to the test, once they have met the enemy in Combat, and discover whether their strength – and a touch of divine fortune – can bring them the victory. And perhaps more important, whether the defeated side can continue to fight on. This is also when your leaders and champions will meet in single Combat with their counterparts, fighting great duels that will live in legend.

During the Melee Phase, all Engaged units will attack each other: each group of interlocked units in contact with each other is called a 'Combat'. Each Combat goes through a Round of Combat, one Combat after another.

The Melee Phase is carried out using the following sequence:

I **Enemy Wiped.** If a unit's opponents have been removed outside the Melee Phase, the unit may perform a Post-Combat Pivot or an Overrun (if it was Charging).

Round of Combat. Each Combat is resolved in an order chosen by the Active Player.

For each Combat, follow this sequence:

1. **Combat Set-Up**
 - (a) Remove **Shaken** units
 - (b) Check **Combat Formations**
 - (c) **Static Combat Score**
 - (d) **Combat Choices**
 - (e) **Freeze Unit Boundaries**
2. **Perform Melee Attacks**
 - (a) **Determine Agility Order**
 - (b) **Allocating Attacks**
 - (c) **Resolve Attacks**
- II 3. **Determine the Winner**
 - (a) **Casualty-based Combat Score**
 - (b) **Calculate Final Combat Score**
 - (c) **Take Break Tests**
4. **Fleeing and Pursuing**
 - (a) **Determine who Flees and who Pursues**
 - (b) **Unfreeze Unit Boundaries**
 - (c) **Move Broken Units**
 - (d) **Move Pursuing Units**
5. **Post Combat**
 - (a) **Post-Combat Pivots**
 - (b) **Combat Reforms**

III Repeat steps II for each Combat: choose a Combat and complete all actions in the Round of Combat Sequence for each unit in that Combat, before moving on to resolve the next Combat.

IV Once all Combats have been resolved, the Melee Phase ends.

Enemy Wiped

Sometimes a unit that was previously **Engaged in Combat** had all its opponents removed before the start of the next Melee Phase.

Such units follow the rules for '**No More Foes**'.

If the unit has not moved since the enemy units were removed (e.g. with a **Magical Move**), it may perform a Post-Combat Pivot, or an Overrun, if the unit was considered Charging immediately before removing the enemy unit.

Combat

Each Combat is fought between a group of units that are in contact with each other. Most often, it involves only two opposing units Facing off, but it can also include multiple units against a single enemy unit, or a series of units from both sides all linked together.

The Active Player chooses one such Combat to fight in a Round of Combat (which means all actions connected to a Round of Combat must be resolved with all Engaged units).

Then the Active Player chooses a new Combat that has not been fought in this Melee Phase, to fight a Round of Combat.

Continue choosing and resolving Combats until all of them has been fought.

First Round of Combat During the First Round of Combat, specific rules come into play.

A unit's First Round of Combat occurs in two situations:

- The First Round of Combat it fights after successfully Charging an enemy unit.
- The First Round of Combat after it has been successfully charged by an enemy unit, whereas it was not already Engaged in Combat.

Combined Combats Any Combat that involves more than two units is called a 'Combined Combat'.

1 Combat Set-Up

1.A Remove Shaken units

Remove all models in Engaged units that are **Shaken** as casualties.

Remember that units Engaged in Combat do not take Panic Tests.

*Therefore, the most common way for a **Shaken** unit to find itself in Combat, is if it gets charged when it was already **Shaken**.*

1.B Check Combat Formations

Steady

A unit is **Steady** if it has *more Proper Ranks* than each individual enemy unit Engaged in contact with it.

If, at the end of a Round of Combat, the unit is **Steady** and was on the losing side, Discipline modifiers from the Combat Score difference are **set** to a minimum of -2 (i.e. cannot be a smaller number than -2).

Solid

A unit is **Solid** if its number of Proper Ranks is at least:

- 4 – for units of Height 0-1.
- 3 – for units of Height 2.
- 2 – for units of Height 3-5.

If a **Height 1** unit is **Solid** at the **start** of a Round of Combat, then all Height 1 models in the unit gain **Press of Ranks** (+1 to wound, max. 3+) until the end of the Round of Combat.

Steadfast

If, at the **end** of a Round of Combat, the unit is both **Steady** and **Solid**, it is said to be **Steadfast**: modifiers to the unit's Discipline from the Combat Score difference are ignored when rolling Break Tests.

Surrounded

A unit is considered **Surrounded** when it has enemies Engaged with either its Flank and/or Rear Facing.

A **Surrounded** unit counts as having X fewer Proper Ranks, where 'X' is the combined number of Proper Ranks of all the enemy units Engaged on its Flank and/or Rear.

If multiple units in the same Combat are **Surrounded**, first apply **Surrounded** from units that are themselves not **Surrounded**. Then apply **Surrounded** from units that are **Surrounded**.

The Active Player chooses the order in which to perform each of these steps.

*The primary effects of this are on the amount of Combat Score the unit will get for Proper Ranks (ie. Rank Bonus), and whether the unit and its enemies are **Steady** and/or **Solid**.*

Note that a unit that has 0 Proper Ranks would be unaffected by this reduction.

1.C Calculate Static Combat Score

The goal of a Round of Combat is to annihilate or rout the enemy, the latter is done through winning the Round of Combat, by having your units accumulate a higher total 'Combat Score' than the opponent's units.

The Combat Score is calculated at two different steps:

1. First in step 1.D of the Round of Combat Sequence ('Combat Set-Up'), where Static Combat Score bonuses are added up and marked down.
2. After all attacks have been made, at step 3.B of the Round of Combat Sequence ('Determine the Winner'), Casualty-based Combat Score bonuses are added to calculate the final Combat Score.

The Static Combat Score bonuses are:

- **Charge: +1**
Each side with one or more Charging units adds +1 to their Combat Score.
- **Fighting on the Flanks or the Rear: +2 / each Flank or Rear**
If a side has units fighting the enemy in their Flank or Rear, it adds +2 to its Combat Score for **each** different Flank or Rear Facing of **each** enemy unit it has units Engaged on.
- **Rank Bonus: +1 / Proper Rank (up to +4)**
Each side adds to its Combat Score the number of Proper Ranks of its unit that has the most Proper Ranks, up to a maximum of +4. *Note that the Rank Bonus of a unit can be reduced if it is **Surrounded**.*
See 'Models and Units' in the 'Definitions and Terminology' chapter for the definition of 'Proper Rank'.
- **Standard Bearer: +1 / Standard Bearer**
Each side adds +1 to its Combat Score for each unit with a Standard Bearer Engaged in the Combat.
- **Other Modifiers**
Additional modifiers can be added to each side's Combat Score (such as +1 if the **Battle Standard Bearer** is Engaged in the Combat).

Designer notes: Combats can be messy and time-consuming to resolve. To simplify the process, we recommend placing special dice or markers next to the units to track the Static Combat Score.

1.D Combat Choices

Many models have choices that are determined in this step of the Round of Combat Sequence.

Common ones: Make Way for Characters, Activate items and abilities and choose weapon.

If both players have choices to do in this step, the Active Player first makes and executes all their choices, then the Reactive Player makes and executes all their own choices.

Choose Melee Weapon

Model parts armed with multiple weapons must choose which weapon to use in their First Round of Combat, following this priority order*:

1. An Enchanted Weapon
2. Any weapon that is neither a Hand Weapon, nor an Innate Weapon
3. A Hand Weapon
4. An Innate Weapon

A model part with **Weapon Master may choose what Melee Weapon to use in each Round of Combat, and only needs to conform to the Priority #1.*

1.E Freeze Unit Boundaries

When resolving a Round of Combat, the Unit Boundaries of the Engaged units are not updated, but retain their sizes and positions.

Furthermore, the placement of models in those units is also not changed (e.g. to ensure viable formation when casualties are suffered).

When calculating the number of ranks, files, or Proper Ranks a unit has (this is primarily relevant for **Steady** and **Solid**), empty gaps in the unit formation (e.g. due to a dead Attachable Model) are considered to be filled in by models from back ranks, in the same way you would normally fill empty gaps (see the 'Definitions and Terminology' chapter for details).

Note that models are not physically moved at this stage.

Unit Boundaries remain Frozen until just before Broken units perform their Flee Moves or when the unit whose boundary it is, is removed as a casualty.

*Note that the number of Proper Ranks can still be reduced for **Steady** or **Solid** purposes if models get removed during Combat.*

Designer notes: Unit Boundaries and models' positions are Frozen in place, in order to prevent the need to do any finicky movement and repositions in messy situations, at a time where players should be focusing on rolling their attacks.

2 Perform Melee Attacks

2.A Determine Agility Order

The order in which Melee Attacks are performed is determined before any attacks take place.

This order is known as the 'Agility Order' and is based on the Agility of the attacking model parts. The highest Agility attacks are resolved first, followed by lower Agility attacks. *Once the Agility Order is determined, it remains so for the Round of Combat.*

Charging Momentum

Charging models gain +1 Agility.

2.B Allocating Attacks

When allocating Melee Attacks, each attack must choose a target. All attacks on the given Agility Step must be allocated before determining the number of hits.

Viable targets are:

- Rank-and-File models in any unit whose Unit Boundary (see 'Definitions and Terminology' chapter) the attacker is in contact with.
- Any Attachable Model that the attacker is in contact with.

If a model is making Supporting Attacks, it can allocate its attacks as if it was located in the Front Rank of the unit, in the same file.

2.B.a Which Models can Attack

During the Melee Phase, models that can perform Melee attacks against an enemy unit when their designated Agility Step is reached **must** attack.

Except if they have been removed as a casualty.

Restricted Attacks

The rules for Restricted Attacks are used for Standard Melee Attacks in two circumstances:

- **Supporting Attacks:** models in the second rank can use Standard Melee Attacks against enemies across models in the first rank, directly in front of them (i.e. only against models Engaged with the Front Facing of their unit).
- **Flank and Rear:** Restricted Attacks apply when a model allocates Standard Melee Attacks towards an enemy that is Engaged with its Flank or Rear Facing.

When a model intends to allocate any of its Standard Melee Attacks as Restricted Attacks, the total Standard Melee Attacks its combined model parts can make is usually **never** greater than its Height *Note that rules like Extra Support (X) can change this limit.*

If the model has multiple model parts (see Models and Units in the 'Definitions and Terminology' chapter), its owner may decide which attacks from what model parts are used, as long as the total number of attacks for the combined model does not exceed its Height.

For example, a Height 2 model consisting of a Knight (Att 2) on a Horse (Att 1) is making Supporting Attacks. This model can only perform 2 Standard Melee Attacks, and choose to first perform 1 attack with the Knight, and then at a lower Agility Step, 1 attack with the Horse.

Fighting Over Gaps

Models are considered to be in contact with each other across gaps.

This can happen if there are gaps in a unit formation, or if units are not perfectly aligned with each other.

To check if they are in contact, extend their bases in the direction of the Facing the unit is Engaged in.

If this contacts an enemy model on the Facing it is Engaged with, both models are considered to be in contact with each other.

The base cannot be extended past Impassable Terrain or a Unit Boundary belonging to a different unit.

See images below for examples.

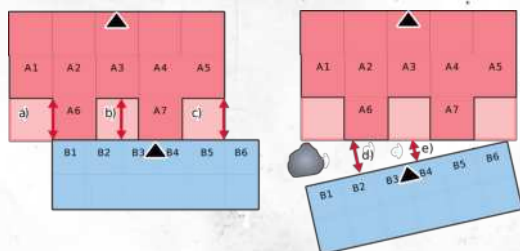

Figure 8: Fighting over Gaps.

– Left panel: Gaps in the unit formation. Models from the blue and red units are considered to be in contact over the gap indicated by the arrows a, b, and c.

– Right panel: Imperfectly aligned units. The units are not perfectly aligned, but blue and red units are still considered to be in contact over the gap indicated by the arrows d and e.

2.C Resolve Attacks

Resolve Melee Attacks from models in the Combat, in descending Agility Order.

For each attack, follow the Attack Sequence as defined in the 'Attacks' chapter.

This includes models from both sides involved in the Combat.

2.C.a Standard Melee Attacks

The most common type of attack in the Melee Phase is the Standard Melee Attack, which all models can perform provided they have an Attack Value on their profile (see 'Characteristic Profiles' in the 'Definitions and Terminology' chapter).

To resolve these attacks, roll a number of D6 equal to the Attack Value of the attacking model part. This is called a 'to-hit' roll.

Compare the attacking model part's Offensive Skill with the target model's Defensive Skill and check the table below to know which result is needed on the dice roll to score a successful hit.

A roll of '1' is always a failure, and a roll of '6' is always a success.

Both tables present the same relation, visualised in different ways.

Offensive Skill – Defensive Skill	Result needed to hit
4 or more	2+
1 to 3	3+
–3 to 0	4+
–4 or less	5+

Once you have determined the number of hits, follow the Attack Sequence (described in the 'Attacks' chapter), using the Strength, Armour Penetration, and on the profile of the attacking model part, potentially modified by things like weapons, spells and Model Rules.

3 Determine the Winner

3.A Casualty-based Combat Score

Once all Agility Steps have been resolved, i.e. all models have had a chance to attack, the Casualty-based Combat Score is calculated.

The Casualty-based Combat Score bonuses are:

- **Health Point losses caused on enemy units: +1 / Health Point**

Add up the number of Health Points lost by your opponent's units during the Round of Combat.

- **Wiped enemy unit: +1 / unit**

Add +1 for each enemy unit where all the unit's models were removed as casualties (in addition to the Health Points losses incurred by those units before being wiped out).

This includes **Shaken** units that were removed at the start of the Round of Combat; however, **Shaken** units only contribute with +1 for being wiped, no Health Point losses are taken into account.

3.B Calculate Final Combat Score

Determine which side won this Round of Combat.

This is done by adding the Casualty-based Combat Score bonuses to the previously calculated Static Combat Score bonuses

The side with the higher Combat Score wins, while the side with the lower Combat Score loses.

In case of a tie, both sides are considered winners.

A unit that is no longer in contact with any enemy units always counts as having won the Round of Combat.

3.C Take Break Tests

After Calculating the Final Combat Score, each unit on the side that lost the Round of Combat must take a Break Test, in an order chosen by the player who lost the Round of Combat.

A Break Test is a **Courage Test** with a negative modifier equal to the difference in Combat Scores.

For example, if the Combat Score was 6 to 3, the units on the losing side take their Break Tests with a -3 modifier.

*Note that rules such as **Steady**, **Solid**, **Bodyguard** and **Stubborn** can have an impact on what the Discipline modifier ends up as.*

- If the Break Test is **passed**, the unit remains Engaged in the Combat.
- If the Break Test is **failed**, the unit is 'Broken', and will now attempt to Flee from the Combat.

4 Fleeing and Pursuing

4.A Determine who Flees and who Pursues

If any unit failed its Break Test or was wiped out during the Combat, follow the steps below in order:

Determine Flee Direction: each Broken unit (i.e. any unit that failed its Break Test) will Flee away from an enemy unit it is in contact with.

- 1 If there are more than one unit to Flee away from, the owner of those enemy units chooses which is used to establish the Flee direction.

Roll Flee Distance: typically, this is a roll of 1d6+4.

- 2 Place the resulting dice next to the unit, but do not move the unit yet.

Determine which units will Pursue: each unit in contact with one or more Broken enemy units, and no non-Broken enemy units, may choose to Pursue a unit it is in contact with. Declare which unit is Pursuing which Broken unit.

- 3 A unit that was Charging in the previous Round of Combat and is now no longer in contact with any enemy unit (usually, because all of them have been wiped out) may choose to perform a special type of Pursuit called an 'Overrun'.

An Overrun is always straight forward.

Roll Pursue Distance: typically, this is a roll of 1d6+4.

- 4 Place the resulting dice next to the unit, but do not move the unit yet.

Remove caught Broken units: compare the Flee Distance of each Broken unit with the Pursue Distances of any unit that Declared a Pursuit towards it.

- 5 If the Flee Distance is greater than all Pursue Distances, the Broken unit managed to get away. Otherwise, the unit was caught and is removed as a casualty.

4.B Unfreeze Unit Boundaries

The Unit Boundaries of any remaining units are unfrozen, and the models within the unit are rearranged to reform a valid formation.

See '*Maintaining a Viable Formation*' for details.

Nudge units to maintain contact

After unfreezing Unit Boundaries and rearranging models within the unit to maintain valid formations, any unit that was Engaged in Combat just before this, but lost contact due to updated Unit Boundaries, is nudged back into contact.

This does not apply to units that are about to Flee, nor units that are about to Pursue.

Move units one at a time, in the order described below, until all units have either attempted to maintain contact and failed, or are back in contact with the enemy.

- Move the Active Player's units first.
- Move all units on each side, in the order that allows the most units to remain in Combat.
- If different ways of proceeding bring about the same amount of units remaining in Combat, each owner decides in which order their own units will be nudged.

Nudge each unit to maintain contact with the unit(s) it was in contact with before updating Unit Boundaries, following the rules below:

- If the unit is in contact with an enemy, it is not nudged.
- The unit cannot be nudged through units or Impassable Terrain.
- The unit cannot be nudged into contact with any new enemy unit, but can end this move within 1" of other units and Impassable Terrain.
- The unit must be moved by the minimum distance required to maintain contact.
- The unit must be moved in a straight line: either directly forwards, directly backwards, sideways, or in a combination of two of these directions.
- The unit cannot change which of its Facings are in contact with enemies.

If these rules do not allow the unit to maintain contact, do not move the unit at all. Units that lose contact follow the rules for 'No More Foes'.

If, as a result of updating Unit Boundaries, two or more separate groups of opposing units have been created, sub-group will be treated as a separate Combat from now on.

No More Foes

When a unit is unable to be nudged back into contact with enemies it previously was in contact with (including due to those enemy units no longer being on the Battlefield, e.g. because they have been removed as casualties, during or outside the Round of Combat, such that it finds itself no longer Engaged in Combat.

It may perform a Post-Combat Pivot, or if it was Charging, an Overrun.

4.C Move Broken Units

Each Broken unit that was not caught is now **Shaken** and will Flee from the Combat.

Move the units one by one in the order chosen by their owner.

First, Pivot the unit so that its Rear Facing is parallel with its Facing that was Engaged with the enemy unit it is Fleeing away from, by Pivoting either exactly 0, 90, or 180 degrees.

Then, the Broken unit performs a Flee Move straight forward by the previously rolled Flee Distance (see the '*Psychology*' chapter for Flee Move rules).

4.D Move Pursuing Units

Move each unit that declared a Pursuit one by one in the order chosen by their owner. First, Pivot the unit so that it is Facing the same direction as the Broken unit it is Pursuing.

Then, move the unit straight forward by a distance equal to the previously rolled Pursue Distance.

A unit that is performing an Overrun always moves straight forward without Pivoting.

If there are Pursuing units on both sides, the Active Player moves all their units first, then the Reactive Player moves their units.

During a Pursue Move, the following objects are considered to be 'Obstructions' with individual rules for what happens if moved into contact with during a Pursue Move:

- Impassable Terrain Feature
- Friendly units that were not part of the same Combat
- Enemy units that Fled from the Combat involving the Pursuing unit

4.E Pursue Moves

Before moving any unit, check:

- Which Pursuing unit would be led to a Charge due to its Pursue Move, ignoring other Pursuing units.
- Which Arc the centre of the Pursuing unit's Front Facing is located in. For each enemy unit that might be Charged as part of the Pursue Move: if the Pursue Move will lead to a Charge, it will be in the Facing determined at this point.

The Charging units will be moved first.

The order must be chosen, so that the number of units that successfully completes a Charge is as high as possible. The remaining Pursuing units will be moved afterwards, in an order chosen by their owner.

1. Pivot

The Pursuing unit Pivots so that it is Facing the same direction as the pursued unit or, if that unit was removed as a casualty, the direction the pursued unit would have had, if not removed as a casualty.

Ignore the Unit Spacing rule during this Pivot. *Note: this means Unit Boundaries are allowed to overlap.*

After the Pivot, one of the four situations will arise. If more than one is applicable, only apply the uppermost one:

- A. **Enemy unit:** if, after the Pivot, the Front Facing of the Pursuing unit would be in contact with the Unit Boundary of an enemy unit that did not Flee from the same Combat, it Declares a Charge towards that unit, which cannot perform any Charge Reactions.

(If there is more than one possible target, the Pivoting unit chooses which unit to Charge.)

To perform the Charge Move, remove the Pursuing unit from the Battlefield, then place it back following the rules below:

- It cannot change formation.
- Its Front Facing must be in contact with the enemy unit's Target Facing (determined before the Pivot).
- The centre of the Pursuing unit must move as short a distance as possible from its position before the Pivot, while still allowing a valid position following the Unit Spacing Rule after the Initial Align Move.

Afterwards, perform the Initial Align Move (*see the 'Charge Phase' chapter; in case of an Unaligned Charge, only perform the 'Initial' Align Move, not the 'Special' Align Move*).

If there is not enough room to place the Pursuing unit in contact, treat the enemy unit as an Obstruction instead.

- B. **Battlefield Edge:** if, after the Pivot, the Front Facing of the Pursuing unit would be in contact with (or outside) the Battlefield Edge, the unit instead performs a Post-Combat Pivot, and then moves no further (*i.e. ignore step 2: 'Forward Ahead'*).

If it is not possible to perform this Post-Combat Pivot in a way that puts the unit in a valid end position, treat the Battlefield Edge as an Obstruction instead.

- C. **Obstruction:** if, after the Pivot, the Front Facing of the Pursuing unit would be in contact with an Obstruction, the unit instead Pivots so that it faces a direction as close as possible towards the same direction that the Pursued unit is Facing (or would be Facing, if it was removed as a casualty), while following the Unit Spacing rule.

The unit then moves no further.

- D. **Free to move:** if, after the Pivot, the Front Facing of the Pursuing unit is not in contact with any other unit, Battlefield Edge nor Obstruction, proceed to step 2: 'Forward Ahead'.

2. Forward Ahead

Without moving the Pursuing unit, check what the first Obstacle, would be, within the rectangle formed by extending its Front Facing directly ahead of the unit a distance equal to the rolled Pursue Distance.

If more than one of these situations is applicable, apply only the uppermost one.

The Unit Spacing rule is ignored when doing this check and for all movement during Forward Ahead.

- A. **Enemy unit:** if the first Obstacle would be the Unit Boundary of an enemy unit that did not Flee from the same Combat, the Pursuing unit Declares a Charge towards that unit, using its Pursue Distance roll as its Charge Range.

If there is more than one possible target, the Pursuing unit chooses which one to Charge.

The charged unit may not perform any Charge Reactions.

The Pursuing unit immediately performs a Charge Move towards the previously determined Target Facing, following all the normal Charge Move rules including: Align Moves, 'Unaligned Charge' and 'Blocked Path' if applicable.

If the Charge cannot be completed, the unit does not perform a Failed Charge Move, but treats the enemy unit as an Obstruction instead.

If the Pursuing unit joins a Combat that has already been fought or was created during this Melee Phase, it will be resolved in the next Melee Phase, with the Charging unit still counting as Charging.

If the Pursuing unit instead joins a Combat that was *not* created and has *not* been fought yet during the same Melee Phase, it will then fight again and can Pursue again this Phase.

- B. **Battlefield Edge:** if the first Obstacle would be the Battlefield Edge, move the unit straight forward until it touches the Battlefield Edge, then immediately perform a Post-Combat Pivot.

- C. **Obstruction:** if the first Obstacle would be an Obstruction, move the unit straight forward until just before it enters into contact with the Obstruction.

- D. **Free to move:** if the Front Facing of the Pursuing unit would not come in contact with any Obstacle, move it straight forward by its Pursue Distance.

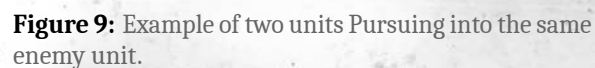

3. Valid Position?

At the end of the Pursue Move, check if the unit is in a valid position following the Unit Spacing rule.

It cannot be in contact with any enemy unit it did not Declare a Charge towards, but can be within 0.5" of Impassable Terrain or other units (such as friendly units that were part of the same Combat).

If the unit is not in a valid position, at the end of the move, backtrack it to its last valid position where it follows the Unit Spacing rule.

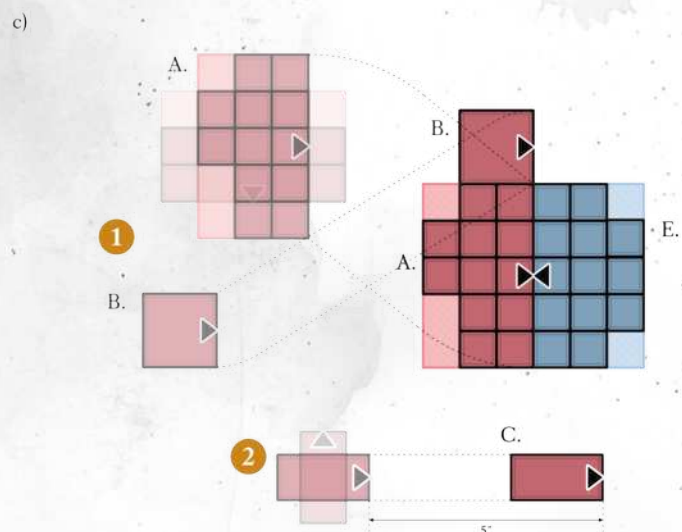

a) Unit D loses the Combat, Breaks, and Flees 7". The owner of the winning units chooses to roll for unit A's Pursue Distance first: 6", which is not enough to catch the Fleeing unit. Unit B's Pursue Distance is 7", which is equal to or higher than unit D's Flee Distance: the Fleeing unit is immediately removed as a casualty. Unit C's Pursue Distance is 5".

b) When checking which units will Charge an enemy unit during their Pursuit, before moving any Pursuing unit, it turns out that both unit A and unit B will Charge unit E: both units thus declare a Charge against unit E. Unit C will not Charge any enemy units.

c) Now units A and B perform their Pursue Moves first. During this move, they can move through one another ignoring the Unit Spacing rule. Otherwise, they move using the normal rules for Charge Moves (ie. one Wheel allowed, Maximising Contact, etc.). In order to maximise the number of models and units in contact, unit A aligns its Front Facing with unit E's, while unit B moves into corner to corner contact with unit E. Afterwards, unit C Pivots and moves its Pursue Distance straight forward.

5 Post Combat

5.A Post-Combat Pivots

Any unit that was Engaged during this Round of Combat, but no longer is, and that did not perform a Pursue Move, can now perform a Post-Combat Pivot using the rules for a Pivot Manoeuvre. (See the 'Movement Phase' chapter.) A unit that performs a Post-Combat Pivot, whatever its reason, cannot Declare any Charges in the Charge Phase of the next Player Turn. (If the next Player Turn is your opponent's, the unit can Declare Charges as normal in your next Player Turn).

5.B Combat Reforms

After all Fleeing and Pursuing units have been moved, any unit that is still Engaged in the Combat may attempt to perform a 'Combat Reform', with the following restrictions:

- A unit Engaged on more than one of its Facings can never make a Combat Reform.
- Any unit on the losing side of the Round of Combat, as well as any unit Engaged on its Flank or Rear Facing, must pass a Command Test to be able to Combat Reform.

First, the Active Player declares which of their units will attempt to perform a Combat Reform, taking Command Test where needed. Then the Reactive Player declares which of their units will attempt to perform a Combat Reform, taking Command Test where needed.

Any units that are not perfectly aligned with the Target Facing of an enemy they are Engaged with at the time of declaring which units will attempt a Combat Reform, **must** attempt to do so, following the usual rules for Combat Reforms.

Once it has been established which units will perform a

Combat Reforms, the Active Player chooses which player performs all of their Combat Reforms first; each player chooses in which order to perform their own units' Combat Reforms.

When performing a Combat Reform, remove the unit from the Battlefield and place it back into contact with the enemy unit(s), following the rules below:

Note: A Combat Reform is an Uncontrolled Move.

1. The unit can be placed in any viable formation, provided its number of files does not change by more than ± 1 .
2. At least as many models from **both** the reforming unit, and all units it was in contact with before the Combat Reform, must still be in contact with opposing models as before, but they do not have to be the same models.
3. Any Attachable Model, from either side, that was in contact with an enemy before the Combat Reform must remain in contact after the Combat Reform.
4. The unit can not move into contact with enemy units it was not in contact with before the Combat Reform.
5. The unit must maintain contact with the same enemy units as before the Combat Reform, and with the same Facings of those enemy units.
6. After having made its Combat Reform, the unit must be perfectly aligned against the enemy Facing it is Engaged with.

If multiple units are performing Combat Reforms, then the requirements mentioned above must be fulfilled at the end of all Combat Reforms by the first player, and then again at the end of all Combat Reforms by the second player, rather than after each individual unit has made its own Combat Reform.

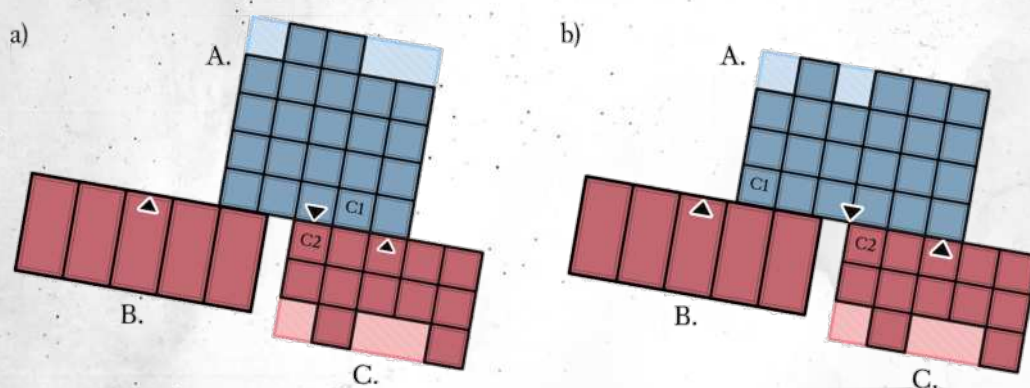

Figure 10: Combat Reforms.

a) At the end of a Round of Combat, unit A is Engaged with unit B and Unit C. Unit A performs a Combat Reform.

b) Unit A has made its Combat Reform: the unit has added a file on its right flank, and the Character joined to the unit has changed position so as to be located on its front-right corner.

AFTER THE GAME

When the game ends, it is time to determine the winner. Do this by calculating Victory Points (VP) based on the following rules. You might also use custom rules for deciding a winner, if agreed upon by both players.

1 Battle Points

The winner of the game is determined by the number of Battle Points they score. Players always share a total of 20 Battle Points, making a 10-10 a draw and a 20-0 a decisive victory.

Battle Points can be scored in three ways:

- **Victory Points:** the primary way to score Battle Points is by defeating enemy units, which gives you Victory Points (VP) (see below for details on how many VP units give).
- **Winning the Primary Objective:** each player competes for the same Primary Objective, selected at the start of the game. The player who wins the Primary Objective scores 3 Battle Points, while the other player loses 3 Battle Points.
- **Completing Secondary Objectives:** each player usually has one Secondary Objective, selected at the start of the game. For each Secondary Objective a player completes, they score 1 Battle Point, while their opponent loses 1 Battle Point (which means that if each player completes an equal number of Secondary Objectives, the score does not change).

Designer notes: If no outside source tells you how to use Secondary Objectives (e.g. tournament organizer, campaign rules, etc.), players should establish how much they want to focus on Secondary Objectives before the game. Consider the following guidelines:

- In standard competitive games, Secondary Objectives are typically worth +1/-1 BP, as detailed in the table below.
- For games focused on learning the core rules, it is recommended to ignore Secondary Objectives entirely.
- Those seeking a more immersive, story-driven experience may opt to assign a higher value to Secondary Objectives, such as +5/-5 BP.

Players are encouraged to assign a value for Secondary Objectives corresponding to their desired level of competitive challenge and narrative engagement.

Scoring Victory Points

At the end of the game, each player earns Victory Points (VP) using the rules below.

- **Destroyed Units:** you gain a number of VP equal to the full Points Cost (as stated on the Army List) of each enemy unit that has been removed as a casualty.
- **Shaken Units:** you gain a number of VP equal to half the Points Cost (as stated on the Army List, and rounding fractions up) of each enemy Unit that is **Shaken** at the end of the game.

- **Decimated Units:** you gain a number of VP equal to half the Points Cost (as stated on the Army List, and rounding fractions up) of each enemy unit that is **Decimated** at the end of the game (so that each enemy unit that is both **Shaken** and **Decimated** at the end of the game gives you its full Points Cost in VP).

When calculating VP, Attachable Models are considered separately from the units they are joined to at the end of the game.

After summing all Victory Points for both players, calculate the difference between the amount gained by each player. Compare that difference to the Army Size, and check the table below to convert Victory Points to Battle Points. The player who scored the most Battle Points is the winner.

VP difference	BP winner	BP defeated
0 – 5%	10	10
>5 – 10%	11	9
>10 – 20%	12	8
>20 – 30%	13	7
>30 – 40%	14	6
>40 – 50%	15	5
>50% or more	16	4
Primary Objective	+3	-3
Each Completed Secondary Objective	+1*	-1*

For example, at the end of a game with a 3000 points Army Size, player A scored 2054 VP and player B scored 1004 VP.

- The difference is 1050, which is 35% of 3000. This means that player A receives 14 Battle Points, and player B, 6 Battle Points.
- Player A won the Primary Objective, which modifies the result into 17-3.
- Both players completed their Secondary Objective: the result is thus not further modified.

Designer notes: *If it was decided to increase the value of Secondary Objectives before the game, modify these values accordingly.

DEFINITIONS AND TERMINOLOGY

1 Measuring Distances

Distances in The 9th Age: Fantasy Battles are measured in inches, 1 inch being equal to 2.54 cm.

The rules often refer to things being 'within' a certain distance. When measuring distances, the closest points between objects are used, even if there are intervening elements.

Models or units are considered 'within range' if the distance between their closest points is less than or equal to the given range.

Measurements are taken from and to the **Unit Boundary** of a unit (i.e. not necessarily the actual models).

Players are free to measure any distance at any time.

Range

Some effects, such as spells or shooting weapons, have a Range value ('X"). This means that the effect can target things up to X inches away on the battlefield. Models or units are considered to be 'within range' if the distance between their closest points is less than or equal to the given Range.

Long Range

For shooting weapons, we define targets as being in 'Long Range' if they are further away than half of the weapon's Range (but still within the maximum Range).

Designer notes:

Playing The 9th Age at different scales

This game is designed to be compatible with changes in scale. The most common way to use this alternative mode of play is to play it at half-scale, where all distances are halved. This opens up possibilities for gameplay in more confined spaces, such as on ordinary kitchen tables, and entire armies can be neatly stored away in shoe boxes.

- **Distances:** halve all measurements. This includes, but is not limited to, the battlefield dimensions, weapon and spell ranges, Mobility and Charge values, base sizes, area of effects, and more. Alternatively, you could decide to replace inches by centimetres (so that any distance of 10" becomes 10 cm instead).
- **Models:** use smaller models, designed to fit on the half base size. Typically, models suitable for this scale are in the 10 mm range.
- **Custom Measuring Devices:** it is recommended that custom-made measuring devices are used, where all measurements are pre-halved. Such tools simplify rule referencing, eliminating the need for mental recalibration. Alternatively, if you have decided to replace inches by centimetres, you can measure all distances with a normal ruler, measuring centimetres instead of inches.

2 Dice

This game uses six-sided dice for determining random outcomes. These dice are referred to as a 'D6'.

The following different types dice rolls are used in the game:

- **Specific Value:** when the result depends on whether the rolled value meets a specific value, this is noted with single quotation marks around the value, such as '1'.
- **Equal to or Higher:** when the result depends on rolling equal to or higher than a specific target, this is written with a 'plus' sign, such as **3+**, meaning '3 or higher'.
- **Multiple Dice:** sometimes multiple dice are rolled together and, unless stated otherwise, their results are added together. This is indicated by a number preceding the dice type, such as **3D6**, meaning 'roll three dice and add their results together' (for an end result of 3 to 18).
- **Modified Dice Rolls:** dice rolls can be modified in the following ways:
 - Adding a number, e.g. **D6+2**
 - Subtracting a number, e.g. **D6-2**
 - Multiplying with a number, e.g. **D6×2**
- **Maximised and Minimised Roll:** for each instance of **Maximised** or **Minimised**, roll an additional dice, and discard the lowest or highest rolled dice before applying modifiers or adding any results.
 - **Maximised:** for each instance of **Maximised**, add a dice to the roll, and discard the dice that rolled the *lowest* result.
 - **Minimised:** for each instance of **Minimised**, add a dice to the roll, and discard the dice that rolled the *highest* result.
 - **Both:** if both **Maximised** and **Minimised** are applied to the same roll, each instance of one cancels out an instance of the other.
- **Rerolling Dice:** certain effects allow for rerolling specific dice once. This means picking up the dice that meet the reroll criteria and rolling them again, with the second result being final (i.e. a rerolled dice can never be rerolled again).
- **Rolling a D3:** a 'D3' is a three-sided dice that will yield a result between 1 and 3. This can be simulated by halving the result of a D6 roll, rounding up (i.e. '1' and '2' on a D6 count as 1; '3' and '4' on a D6 count as 2; '5' and '6' on a D6 count as 3).

3 Models and Units

Model

A single gaming piece, placed on a base. Each model has its own profile, which consists of various characteristics values, model rules, and equipment. The profile reflects the capabilities of the model.

Rank-and-File model

Normal models in a unit. All models, except Attachable Models (such as all Characters and War Platforms), are Rank-and-File models.

Base

The platform on which a model rests. Bases are square or rectangular, and represent the area of the battlefield occupied by the model. In the game rules, the base is the only physical aspect of the model that matters.

Bases are measured in [front-width × side-length], e.g., 25×50 mm for horse riders.

Unit

A group of one or more models that operate as an entity, arranged in a rectangular formation. Models in a unit move and fight together, coordinating their actions on the battlefield. A unit must be in a viable formation, following these conditions:

- The models are placed in a tight rectangular (or square) formation, facing the same direction.
- The unit cannot voluntarily have more ranks than files, unless the unit is wide enough to have a Proper Rank.
 - For units that are always considered to have 0 Proper Ranks, such as units entirely with **Light Troops**, apply this rule as if they could form Proper Ranks (e.g. a Height 1 unit entirely with **Light Troops** cannot have more ranks than files, unless it is at least five models wide).
 - Joining a unit with a Character or other Attachable model is a voluntary action.

- The models are perfectly aligned and in contact with each other.
- The width of the unit is determined by its first front-most rank. No models may extend past this width.
- Models not in the first rank must be positioned so that another model is directly in front of them, ensuring the entire front edge of their bases are in contact with the models in front of them.
- All ranks within a unit must have the same width, except for the rear rank, which can be narrower.
- It is acceptable for the rear rank to have gaps, as long as the models are aligned with those in the other ranks.
- An 'Incomplete Rank' refers to a rank with one or more missing models.

When a rule, ability, spell, or any other effect affects a unit, all models of the unit are affected, unless explicitly stated otherwise.

Unit Boundary

A Unit Boundary is an imaginary rectangle encompassing the outer edges of a unit. A unit can not be inside the Boundary of another unit, unless they are explicitly allowed to temporarily be overlapping. (*Unit Boundaries can be represented by using unit trays of the right dimensions.*)

Unit's centre

A unit's centre is the centre of its Unit Boundary.

Facings

A unit or a model has four Facings, that correspond to the edges of the Unit Boundary or the model's base: a Front, a Rear, and two Flanks.

Arcs

A unit's Arcs correspond to the area in front of the four Facings, divided by a straight line extending from the corners of the Unit Boundary at a 135° angle from the unit's Facings.

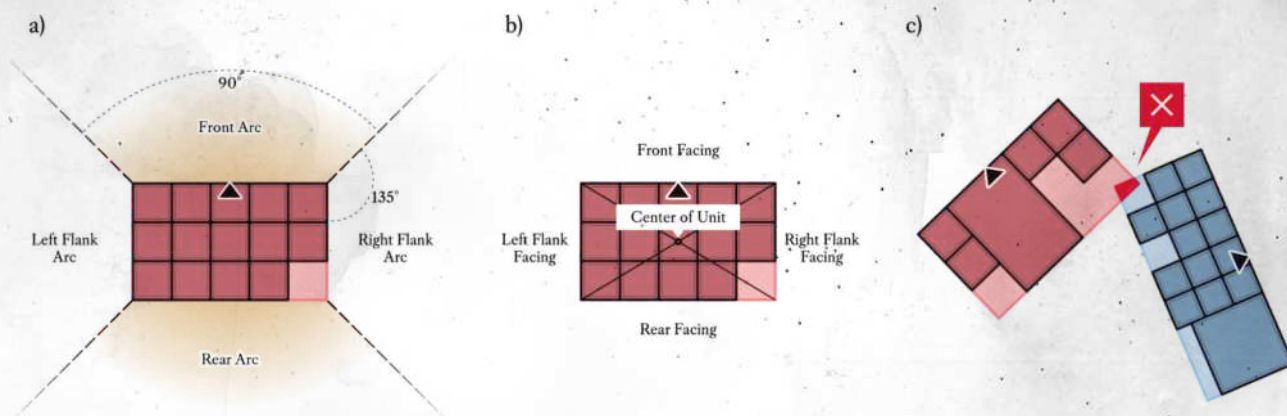

Figure 11: Unit Arcs, Unit Facings, and Unit Boundaries

- This unit has 3 ranks and 5 files. The rear rank is incomplete and only contains 4 models. The Front, Flank, and Rear Arcs are defined by drawing lines from the corners of the Unit Boundary at a 135° angle from the unit's Facings.
- The Unit Boundary is the area drawn around the outer edges of the unit (shaded red lines). The Centre of the unit is the centre of the Unit Boundary.
- A Unit Boundary cannot be inside another Unit Boundary, not even with parts that are not occupied by any models.

Proper Ranks

The number of models required to form a Proper Rank depends on the unit's Height:

- 5 models for Height 0-2.
- 3 models for Height 3-4.
- 1 model for Height 5.

Ranks and Files

Lines of models in the same unit that are side by side are called 'ranks'.

Lines of models that are directly in front of and behind each other are called 'files'.

Model Parts

Some models have multiple lines of Offensive Profiles. Each line represents a different 'model part'.

For example, a cavalry model consists of two model parts: a rider and its mount.

If a rule, ability, spell, or effect affects a model, then all its model parts are affected, unless stated otherwise.

During attacks or shooting, each model part uses its own characteristics and weapons.

3.A Maintaining a Viable Formation

Whenever there are gaps in the formation of a unit, or incomplete ranks other than in the rear rank of a unit, the unit's formation must be reformed into a viable formation.

When redistributing models to fill gaps and incomplete ranks in the unit's formation, do so in the following priority order:

1. Move models from the rear rank.
2. Move models from ranks other than the front rank.
3. Move models from the front rank.

Avoid changing the number of files in the unit. If this is impossible (such as for a unit that only has a single rank), fill gaps by sliding all models from one side of the gap towards the other side.

During a Round of Combat, the Unit Boundaries of all involved units are frozen, and models are not moved around inside the unit, not even to fill empty gaps inside their unit's formation. In this case, only follow the rules above when these are unfrozen ('Unfreeze Unit Boundaries' *Melee Phase - 4.B*).

When determining the number of ranks or files a unit has while its Unit Boundary is frozen, gaps are considered filled by models in back ranks as normal, potentially reducing the actual number of ranks or files.

4 Unit Spacing

Normally, units must maintain a distance of more than 1" from Impassable Terrain and other units both friends and enemies.

During ongoing moves, the Unit Spacing requirement is lowered to outside 0.5".

At the end a move a unit must be outside 1" again.

This means that units are allowed to come within 1", but still outside 0.5" of other units and Impassable Terrain during their moves.

A unit can still not come into contact, overlap with their bases, or voluntarily end a move within 1" of either Impassable Terrain or other units.

4.a Uncontrolled Moves

The following moves are an exception to this:

Charge Moves, Failed Charge Moves, Flee Moves, Pursue Moves, Nudge to Maintain Contact, Combat Reform Moves, and when explicitly stated otherwise.

During an Uncontrolled Move a unit is allowed to move, and end within 0.5" of other units and Impassable Terrain, but cannot overlap with their bases, unless explicitly stated otherwise, *such as it is in Pivot at the beginning of a Pursuit.*

If a unit ends a move within 1" of one or more units or Impassable Terrain it may remain within 1" including within 0.5" of those units and Impassable Terrain, until it is outside 1" again.

Temporarily removing a unit from the battlefield, *such as during a Reform or Pivot*, does not count as moving outside 1", unless it is further away than 1" when placed back.

Invalid Position?

If a unit is ever forced to end a move in an invalid position, as determined by the type of move, or overlapping with a Unit Boundary or Impassable Terrain, backtrack the unit to its last valid position.

5 Properties

Units, attacks and spells can have key words called 'Properties' attached to them. Properties describe the unit's origin, allegiance, elemental effects, equipment, or other defining attributes. Properties can always be identified by their names being displayed in *grey and italics*.

Properties are rules that do not possess any innate or direct effects. Instead, Properties are only used as triggers for other rules. *For example, a rule might restrict Characters from joining a unit unless it possesses the right 'Clan' Property.*

6 Characteristic Profiles

Each unit entry contains three Characteristic Profiles: Global, Defensive, and Offensive. A higher value of a given Characteristic indicates that a model is more accomplished in that Characteristic. These values are used for various game mechanics like moving units and attacking with models. *Some model parts may not have specific values for certain Characteristics, such as the chassis of a chariot without Offensive Skill. These Characteristics are considered to be 0, and cannot be modified in any way.*

Global Characteristics

Each model has three Global Characteristics. These Characteristics are common for all model parts on the same base (i.e. the whole model) and, in most situations, also shared for combined units.

Abbreviation	Characteristics name	Description
Cha	Charge Speed	<i>The higher the Charge Speed, the further the model can charge.</i>
Mob	Mobility	<i>Determines the distance that the model can move when doing a Move Manoeuvre.</i>
Dis	Discipline	<i>How reliably the model follows orders.</i>

- Any reference to a *unit's* Charge Speed or Mobility means the *lowest* Charge Speed or Mobility value among the unit's models.
- Any reference to a *unit's* Discipline means the *highest* Discipline among the unit's models.

Defensive Characteristics

Each model has four Defensive Characteristics. These Characteristics are common for all model parts on the same model.

Abbreviation	Characteristics name	Description
HP	Health Points	<i>A model is removed as a casualty when it loses this many Health Points.</i>
Def	Defensive Skill	<i>How well the model avoids being hit in melee.</i>
Res	Resilience	<i>How easily the model withstands blows.</i>
Arm	Armour	<i>A high Armour value means the model is able to deflect wounds that should have put it out of Combat.</i>

Offensive Characteristics

If a model has more than one model part, each model part has its own set of Offensive Characteristics. Each model part has five Offensive Characteristics:

Abbreviation	Characteristics name	Description
Agi	Agility	<i>Model parts with a higher Agility strike first in melee.</i>
Att	Attack Value	<i>The number of times the model part can strike in a Round of Combat.</i>
Off	Offensive Skill	<i>How good the model part is at scoring hits in melee.</i>
Str	Strength	<i>How easily the model part can wound enemy models.</i>
AP	Armour Penetration	<i>How well the model part can penetrate the Armour of enemy models.</i>

Random Characteristics

Some model parts have random values for one or more Characteristics, such as 'Attack Value D6+1'.

Roll for the value each time immediately before it is used.

In the case of an Offensive Characteristic, the rolled value is used for all simultaneous attacks from that model part.

When several model parts in the same unit have a random value for a Characteristic, roll separately for each model part.

7 Model Height

In the game, each model is assigned a 'Height', which is represented by a number ranging from 0 to 5.

The higher the number, the larger the model's vertical size is. This is important for Line of Sight purposes, but also affects the model's ability to form Proper Ranks, how many Restricted Attacks it can perform, and how many dice it rolls for its Dangerous Terrain Tests.

Height	0	1	2	3	4	5
Required width to form a Proper Rank	5 models	5 models	5 models	3 models	3 models	1 model
Number of Proper Ranks needed to be Solid	4	4	3	2	2	2
Number of Standard Melee Attacks that can be done as Restricted Attacks	0 attacks	1 attack	2 attacks	3 attacks	4 attacks	5 attacks
Number of dice rolled for Dangerous Terrain Tests	0 D6	1 D6	2 D6	3 D6	4 D6	5 D6

Some rules may reference a *unit's* Height or a *Unit Boundary's* Height, such as for determining the number of models needed to form a Proper Ranks in units composed of models of different Heights.

In such cases, the unit's Height is determined by the largest group of models with the same Height.

In situations where there is a tie, use the smallest Height.

8 Line of Sight

A model can draw Line of Sight to its target (a point, a model, or a Unit Boundary) if you can draw a line from the model to its target in the model's Front Arc and without crossing Line of Sight-blocking Obstructions, such as:

- **Opaque Terrain** (see the 'Terrain' chapter).
- Models in another unit whose Height is equal or greater than to both the model's and its target's.

A model that is not in the front rank of a unit, instead draws its Line of Sight from a point on the Front Facing of its unit that is directly in front of it (typically from the Front Facing from a model directly in front of it).

All of the following conditions must be fulfilled:

- The line must be a straight line with its starting point on the model's Front Facing.
- The line can only deviate at most 45° from the straight

forward direction of the model (this means that the line cannot be drawn outside the model's own Front Arc).

- Models never block Line of Sight to or from other models within the same unit.
- The line between the model and the target does not cross over any Obstruction, such as:
 - Any Opaque Terrain.
 - The base of a model in another unit whose Height is equal or greater than *both* the model's and its target's.
 - A Unit Boundary whose Height is equal or greater than *both* the model's and its target's.

A *unit* is considered to have Line of Sight to a target if at least one model in the unit can draw Line of Sight to it. For the purpose of drawing Line of Sight to or from a point on the Battlefield, that point is considered to be of Height 0.

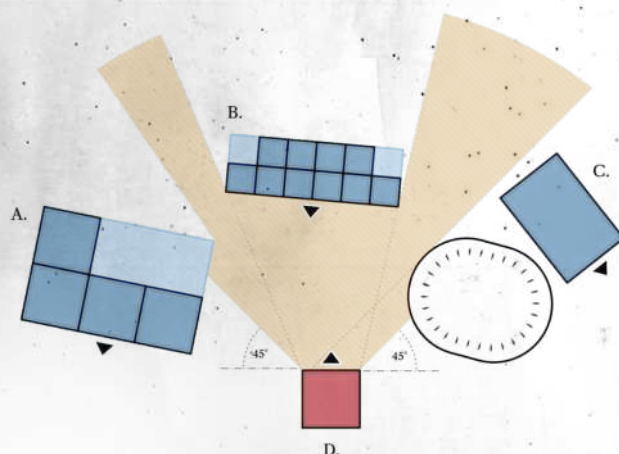

Figure 12: Drawing Line of Sight.

The area within which the single model unit D can draw Line of Sight is marked.

- Unit B is within Line of Sight.
- Unit A is within Line of Sight, as unit D can draw Line of Sight to the Boundary of unit A, even though that part of A's Unit Boundary is not occupied by any models.
- Unit C is not within Line of Sight, as the Impassable Terrain Feature is an Opaque Terrain, therefore blocking Line of Sight from unit D to unit C.

9 Duration of Effects

Certain abilities may provide time-limited additional effects to models. *Generally such effects immediately cease to work when a model is removed.*

The following key-words are used to denote the durations of such effects.

- **Instant:** the effects are applied once, then immediately end.
- **Round of Combat:** the effects last until the end of the Round of Combat in which they were applied.
- **One Phase:** the effects last until the end of the Phase in which they were applied.
- **End of Combat:** the effects last until the model is Unengaged.
- **End of Turn:** the effects last until the end of the Player Turn in which they were applied.
- **One Turn:** the effects last until the start of the next same Phase as when the effects were applied, of the same player (*e.g. if the effects were applied during the Magic Phase of Player A, then they end at the start of the next Magic Phase of Player A.*)
- **Permanent:** the effects last until the end of the game, or until a specific condition is met as described in the effect.
Permanent effects do not end when if the model applying the effect is removed as a casualty.
- **One use only:** these effects can only be used once per game. Each One use only effect will describe when it can be used (or 'activated').

Extended Effects and Combined Units

It can happen that a unit affected by effects with an extended duration (*such as 'One Turn' or 'Permanent'*) becomes divided into multiple units – the most common example of this is when an Attachable Model leaves the unit that it was joined to.

When this happens, the effects keep applying to each of those elements for the given duration. *Continuous effects (i.e. all effects without a specified duration, such as most Banner Enchantments)* continue to affect all parts of the previously Combined Unit.

Duration: One Phase.

An Attachable Model who joins a unit affected by an effect, or a unit that is joined by an Attachable Model affected by an effect, do not become affected themselves.

Simultaneous Effects

When multiple effects occur at the same time, the Active Player resolves their effects first.

Each player decides the order in which they resolve their own simultaneous effects.

10 Modifiers

Modifiers can affect the values of Characteristics, dice rolls, or other numerical values in the game. They can set values, add or subtract from them, multiply or divide them, and are applied in the following order:

1. **A Value Set to a Fixed Number:** when a value or a roll is **set** to a specific number, replace the original value or roll with that number. When a value is **set** to 'at least a number', do not set the value if it would result in a reduction to the value.
2. **Multiplication and Division:** values or rolls can be multiplied or divided by a given number.
3. **Addition and Subtraction:** values or rolls can be modified by adding or subtracting a given number to or from them.
 - a. If a limit is defined in the rule, apply the modification after other operations that do not define a limit, and only up to that limit. *For example, if a Charging model is in contact with a Wall and rolls to hit towards an opponent with **Distracting (1)**, first apply the -1 from being in contact with a Wall, then apply the -1 from Distracting, unless the model already hits on 5+.*
 - b. *Difficulties* (ie., things in the form of 'X+') can also be modified by addition or subtraction. To work out how a modifier applies to a difficulty of 'X+' we use the following formula: [difficulty score] – [modifier] = [new difficulty score]. *For example, an attack wounding on 4+ with a +1 to-wound modifier, now wounds on 3+.*
4. **Always and Never:** some rolls **always** or **never** succeed or fail on certain results, whereas some Characteristics **always** or **never** have a certain value or range of values.
5. **Restrictions:** after applying all modifications, certain limits apply to some Characteristics:
 - (a) Use only whole numbers: round any fractions up.
 - (b) No Characteristics can be below 0, not even temporarily. Set any value below 0 to 0.
 - (c) Armour can never be higher than 6, not even temporary.
 - (d) Discipline and Agility can never be higher than 10, not even temporary.
 - (e) A Melee Attack **always** hits on a '6', and **always** fails on a '1'.
6. **Global and Defensive:** when a modifier is referencing a specific model part, but influences Global and/or Defensive Characteristics, apply those modifiers only once for the whole model.

When multiple modifiers have the same priority step, apply them in the order that results in the lowest value, or the lowest chance of success.

11 Definition of a 'Move'

Some rules may be triggered by a unit performing a 'Move', which is one of the following actions:

- Move Manoeuvres (Advance Move, March Move, Reform Move) and any rule that refers to any of these, such as **Vanguard Moves** and **Magical Moves**.
- Charge Move (*including the Align Move*) and Failed Charge Move.
- Flee Move and Pursue Move (*including Overrun, and Random Movement*).
- Combat Reform and Post-combat Pivot.

12 Contact between Objects

Two objects, such as bases, Unit Boundaries, Terrain Features, and so on, are considered to be in contact if:

- They touch one another:
 - Along a line (*e.g. two rectangular bases contacting each other along their front*).
 - At a single point (*e.g. corner to corner contact between units*).
- One object is overlapping another. An object is considered to be *inside* another if it is either partially or fully inside that other object.

Contact between Models and Units

- Two or more *units* are in contact if their Unit Boundaries touch each other (including corner to corner contact).

- Two or more *models* are in contact if their bases touch each other (including corner to corner contact, and including across empty gaps in a unit, see below).
- A *model* is in contact with a *unit* if it is in contact with that Unit's Boundary.

Contact between Models across Gaps

Incomplete ranks or Characters with Mismatching Base may cause gaps between opposing models whose units are in contact. Two opposing models are considered to be in contact with each other across such gaps if you can draw a straight line:

- from one model to the other (including corner to corner),
- that is perpendicular to both units' Engaged Facings.

A model is considered *not* to be in contact across a gap if its entire Facing that is opposite the enemy model is itself in contact with a friendly model.

13 Battlefield Edge

The Battlefield Edge represents the boundaries of the game.

A unit is allowed to temporarily and partially move off the Battlefield during a Movement Manoeuvre or Charge Move, with the following restrictions:

- The unit's Front Facing must remain entirely on the Battlefield at all times, except during Align Moves where it just needs to end entirely on the Battlefield.
- The unit must finish any movement with its Unit Boundary entirely on the Battlefield.

ATTACKS

Each attempt to kill an enemy first requires you to land a blow, and second, for the blow to prove harmful. And of course, it must not be blocked by armour or other defences.

1 Attacks

Attacks in the game can be performed using Melee Weapons, Shooting Weapons, spells, or unique abilities. This section explains the general process of performing attacks and determining their success in causing damage to their targets.

Most sources of damage are categorised as attacks, which are divided into:

- **Melee Attacks:** attacks made in the Melee Phase, from models towards a unit it is Engaged in Combat with.
 - **Standard Melee Attacks:** the most common type of Melee Attack, where model parts perform a number of attacks primarily based on their Attack Value, are called 'Standard Melee Attacks'.
- **Ranged Attacks:** all attacks that are not Melee Attacks are considered Ranged Attacks.
 - **Shooting Attacks:** the rules sometimes refer to Shooting Attacks or 'attacks made by Shooting Weapons'. Shooting Attacks are a type of Ranged Attacks.

2 Attack Sequence

When conducting an attack, follow this sequence:

- 1 The attacker allocates its attacks to a target.
- 2 Determine the number of hits. If at least one hit is caused, proceed.
- 3 The attacker rolls to wound. If successful, proceed.
- 4 The defender rolls Armour Saves. If failed, proceed.
- 5 The defender rolls Special Saves. If failed, proceed.
- 6 The defender suffers unsaved wounds, loses Health Points and removes casualties.
- 7 The defender takes Panic Tests if necessary.

Complete each step for all simultaneous attacks, such as all Shooting Attacks from a single unit or all Melee Attacks at a specific Agility Step, before proceeding to the next step.

2.A Allocating Attacks

In the Attack Sequence, the first step is to determine the target: select a unit to attack, and which models in the unit to target. This works slightly different for Ranged Attacks than for Melee Attacks.

For Melee Attacks, if several attacks (such as from model parts in the same unit) attack simultaneously, each attack may be allocated towards a different target:

1. The attacker can always allocate its attacks to any Rank-and-File models in an enemy unit in contact.

2. Melee Attacks can be allocated to **Attachable Models** joined to an enemy unit if they are in contact with the attacker's model (or, in the case of **Supporting Attacks**, in contact with a model directly in front of the attacker in the same unit).

See the 'Melee Phase' chapter for details.

3. If the unit in contact with the attacker contains no Rank-and-File models then any model in that unit may be chosen as the target.

For Ranged Attacks, all simultaneous attacks made by the same unit must select the same unit as their target. However, if permitted, the attacks may be allocated to different Health Pools within the unit:

1. Attacks may always be allocated to Rank-and-File models in the target unit.
If the unit contains no Rank-and-File models, any model in the unit may be chosen as the target.
2. Attacks may be allocated to **Attachable Models** joined to the target unit if either of the following conditions apply:
 - The **Attachable Model** is of a different Height than the Rank-and-File models in the unit.
 - The unit contains fewer than 5 Rank-and-File models (or fewer than 3 if those models are Height 3–5).
3. Attacks may allocate hits to multiple units if the effect explicitly allows it.
4. Attacks may also allocate hits to specific models within an unit, including any **Attachable Models** joined to that unit, if the spell or effect explicitly states that it targets individual models.

In cases where a single attack or effect is multiplied into several hits, repeat the attack allocation step once it has been established how many hits are scored. At least one hit must still be allocated towards the original target. So if you cast a spell that causes D6 hits, targeting an enemy unit, and roll a '4' to determine the number of hits, these hits can now be allocated to the different Health Pools in the unit, either the Rank-and-File models, or any Attachable Models meeting the criteria listed above.

2.B Determining the Number of Hits

Some attacks require a to-hit roll, while other attacks hit automatically, inflicting a fixed or random number of hits. The rules for how attacks hit are described for each attack. The most common type of to-hit rolls can be found in the 'Shooting Phase' and 'Melee Phase' chapters.

Whenever an effect inflicts a random number of hits on more than one unit, roll for the number of hits separately for each unit, unless specifically stated otherwise.

2.C To-Wound Rolls

Once you have hit your target, you must wound it in order to potentially cause harm.

To determine if a hit successfully wounds the target, roll a D6 for each hit.

The required roll to wound depends on the difference between the attack's Strength and the defender's Resilience, as indicated in the table below.

A roll of '6' always succeeds, while a roll of '1' always fails. The attacker rolls for each hit to determine if it wounds the target. A successful to-wound roll results in a wound. If the attack does not have a Strength, refer to the specific rules provided for that particular attack.

Difference Str - Res	Required roll to wound
2 or more	2+
1	3+
0	4+
-1	5+
-2 or less	6+

3 Saves

When wounds are inflicted on a unit, there are two types of saves that the defender can make to potentially negate the damage: Armour Saves and Special Saves.

When taking saves, the owner of the attacked model rolls a D6 and compares it with the needed score to pass the save.

See the details below for how to pass Armour Saves and Special Saves.

If successful, the wound is ignored. First roll Armour Save, and then, if this is not passed, roll the Special Save (provided the model has one).

If the Special Save is failed, or the model does not have a Special Save, a wound is inflicted. Proceed to '[Losing Health Points and Casualties](#)'.

3.A Armour Saves

The defender rolls Armour Saves by rolling a D6 for each wound, and comparing the result with the model's Armour Value, reduced by the Attack's Armour Penetration.

The modified Armour value describes the number of sides on a D6, counting down from the highest value; that will result in a successful roll *see the tables below*.

If the Armour Save is successful, the wound is ignored.

A roll of '1' is always a failure.

Arm - AP	Armour Save Roll
5 or above	2+
4	3+
3	4+
2	5+
1	6+
0	Cannot be passed

For example, 'Armour 3', means that '6', '5', and '4' would be successful Armour Save rolls. If the model is attacked by Armour Penetration 1, its Armour is reduced to Armour 2, which now means that '6' and '5' are successful Armour Save rolls.

Combined Armour

Each model has a base Armour value in its profile, and some models may have additional equipment, rules, or be under the effect of spells that modify their Armour values.

Different sources of Armour can be combined, adding up to the total combined Armour.

For example, a model with a base Armour of 3 that is under the effect of a spell that grants +1 Armour, has a combined Armour of 4. When wounded by an attack with Armour Penetration 1, the needed Armour Save roll would be '4', '5', or '6' (or 4+).

3.B Special Saves

If a wound is not saved by the Armour Save, the defender may negate the attack, even an **Unmodifiable** one, with its Special Save, if it has one. Special Saves work like Armour Saves, except they are unaffected by Armour Penetration.

A natural roll of '1' or '2' is always a failure.

There are two types of Special Saves: **Aegis** and **Regeneration**, each explained in detail in the 'Model Rules' section.

A model is only allowed to roll one Special Save roll for each attack.

4 Losing Health Points and Casualties

When a model suffers an unsaved wound, it immediately loses a Health Point, which can result in models being removed as casualties.

Sometimes rules state to a model or unit 'loses X Health Points'. This is to be considered identical with 'suffers X hits that wound automatically and allow no saves of any type'.

When a specific model in a unit 'loses X HP', the HP losses must be allocated onto that model.

When a unit loses X HP due to its own rule or the rule of its army (such as **Supernal** or **Unstable**), all HP losses are assigned and rolled out by its owner.

4.A Health Pools

Health Points are organised into Health Pools.

A unit's Rank-and-File models form a collective Health Pool, while any other models joined to the unit each have their own separate Health Pool.

4.B Casualties

Each unsaved wound reduces the Health Pool by 1 Health Point.

- If the models in the attacked Health Pool have 1 Health Point each, remove one model for each Health Point lost.
- If the models have more than 1 Health Point each, remove entire models whenever possible. Keep track of any lost Health Points that are not enough to remove a whole model, as they will be taken into account for future attacks.

For example, a unit of 10 Trolls (3 Health Points each) loses 7 Health Points: remove two whole models (6 Health Points), leaving 1 lost Health Point, which is kept track of. Later, this unit loses 2 Health Points, which is enough to remove a single Troll, since 1 Health Point was lost from the previous attack.

When there are more Health Point losses than there are Health Points in a Health Pool, the excess losses are ignored. In situations where simultaneous attacks from different model parts, models, or units cause excess Health Point losses, the owner of the attacking models decides which attacks caused the excess losses (if relevant).

When enough Health Points are lost to remove models, do so from as far back in the unit as possible.

In certain situations, additional nuances for casualty removal are needed. In such cases, follow the procedure below:

- Remove models from as far back in the unit as possible.
- Remove models one by one, in any chosen order.
- When casualties are removed from the first rank, remove models equally from both sides of the unit, one by one.
This applies only to each batch of simultaneous losses.
- If a model of a different Health Pool is in a position that would normally be removed as a casualty, remove the next eligible model of the attacked Health Pool and redistribute the models in the unit into a viable formation (see 'Maintaining a Viable Formation' in the 'Definitions and Terminology' chapter).

If the removal of casualties would lead to a non-viable unit formation, such as gaps being created in ranks other than the last, follow the procedure described under 'Maintaining a Viable Formation', in the 'Definitions and Terminology' chapter.

4.C Losing the Last Health Point

When a model loses its last Health Point, it is removed as a casualty.

When the last model from a unit loses its last Health Point, the unit is removed as a casualty.

Certain effects are triggered by models being removed as a casualty, while others are set off by models 'losing their last Health Point' or 'reaching 0 Health Points'.

'Losing the last Health Point' does not apply to situations in which a model is directly removed as a casualty, without actually losing any Health Points (such as units leaving the Battlefield while doing a Flee Move, or being removed as a casualty after Breaking from Combat).

Whenever a model that applies any effect to other elements in the game is removed as a casualty, unless specifically stated otherwise, that effect ends immediately. This also applies to effects that have a specified duration, such as activated effects with Duration: One Turn.

4.D Casualties when Engaged

When an Engaged unit suffers Casualties apply the following rules:

- If casualties would be removed from the first rank, instead of removing models equally from both sides of the unit, remove models from the side that maximises, in the following decreasing order of priority:
 - number of Units in contact with enemy Units.
 - number of Models in contact with enemy Models.
- When checking which models and units lose contact under the above conditions, always treat them as though their Unit Boundaries were not Frozen. This is an exception to the normal rules for Frozen Unit Boundaries.
- If unavoidable, prioritize creating gaps where the greatest number of units can be nudged back into contact.
 - If gaps are created between units, follow the rules under 'Nudge Units to Maintain Contact' (see the 'Melee Phase' chapter).

PSYCHOLOGY

Every commander must face the reality that their troops might not always obey their orders. Soldiers who lack proper military training and discipline may not be able to execute more complex field operations satisfactorily. And when you ask even the hardest warrior to face monstrous terrors, or stand firm when their comrades perish and flee, you should be prepared for the eventuality that their resolve may falter.

In The 9th Age: Fantasy Battles, there are two types of Psychology Tests that represent a warrior's mental state and ability to follow orders:

'Command' and 'Courage'.

When a unit must perform a Command or Courage Test, roll 2D6 and compare the result with the unit's Discipline (see '*Characteristic Profiles*' in the '*Definitions and Terminology*' chapter).

If the result is equal to or lower than the Discipline value, the test is passed. Otherwise, it is failed.

1 Command Tests

Command Tests represent a warrior's ability to perform orderly battlefield manoeuvres and rally after a rout has begun.

Common situations where Command Tests are taken are:

- When attempting to Redirect a Charge.
Remember that this can only be attempted once per Phase per unit.
- When attempting to perform a Combat Reform while on the losing side, and/or when Engaged on the Flank or Rear.
- When taking a Rally Test. See the '*Rally Phase*' chapter for details.

Common Model Rules that affect Command Tests are: **Commanding Presence**, **Disciplined**, **Mindless**, and **Unruly** (see '*Model Rules*' for details).

2 Courage Tests

Courage Tests represent a warrior's ability to hold their position in the face of adversity. There are two primary types of Courage Tests:

- **Panic Tests:** those tests are taken immediately when triggered by some circumstances.
A unit that fails a Panic Test becomes **Shaken**.
- **Break Tests:** taken by units on the losing side of a Combat (see the '*Melee Phase*' chapter for details).

Common Model Rules that affect Courage Tests are: **Beacon of Courage** and **Commanding Presence** (see '*Model Rules*' for details).

2.A Panic Tests

A Panic test is a type of Courage Test taken in certain situations, such as:

- A friendly **Shaken** unit performs a Flee Move through the unit.
– *Take the test after completing the Flee Move.*
- The unit suffered enough Health Point losses in a single phase from Ranged Attacks originating from enemy models to fulfil both the following criteria:
 - The unit suffered at least 3 Health Points losses, and
 - The unit suffered an amount of Health Points losses at least equal to 25% of the number of HP the unit had at the start of the Phase.

Take the Panic Test immediately after possible casualties have been removed. Ignore Health Point losses suffered while Engaged in Combat.

- An enemy unit containing **Terror** declares a Charge against the unit in the Charge Phase.

Units do not take Panic Tests if:

- They are Engaged in Combat, or
- They are already **Shaken**, or
- They already passed a Panic Test during the same phase.

If a unit fails a Panic test, it immediately becomes **Shaken**.
Note: this does not mean that the unit performs a Flee Move.

3 Psychology States

Units may suffer from various psychological states, which can limit their actions.

It is recommended to use markers to indicate the current state of each unit.

Note that units can be in multiple states simultaneously.

3.A Decimated

A model is 'Decimated' when its original* unit's current Health Points is 25% or less of its starting Health Points, as listed in the Army List.

Decimated models are removed as casualties just before they would perform a Flee Move.

* By 'original unit', it is meant the unit as listed on the Army List.

*This means that the Rank-and-File part of a Combined Unit might be considered **Decimated** while an Attachable Model joined to the unit is not, or vice versa.*

*In this case, remove only **Decimated** models from the unit before performing a Flee Move, and leave models that are not **Decimated** on the Battlefield.*

3.B Shaken

When a unit fails a Panic Test, a Break Test, or chooses the Flee! Charge Reaction, it becomes **Shaken**.

A **Shaken** unit is unable to perform *voluntary* actions.

This includes declaring Charges, moving in any way other than a Flee Move, shooting, generating Magic Dice, casting spells, or activating Magic Items that require a voluntary activation.

There is one exception: the unit may still choose to Flee! or Hold! as a Charge Reaction.

*Remember that if unit is **Shaken**, it temporarily stops being **Scoring**. This lasts until it is no longer **Shaken**.*

A **Shaken** unit that finds itself Engaged in Combat is removed as casualty at **step 1** of the Round of Combat Sequence.

***Designer notes:** In order to remember which units are **Shaken**, we recommend that **Shaken** units are clearly marked. This can either be done with specific markers or tokens to indicate a unit is **Shaken**, or if you do not have such markers, a commonly used method for marking **Shaken** units is to take one model from the front rank of the **Shaken** unit, and put it lying face down next to the unit.*

4 Flee Move

A Flee Move is a specific type of move performed in certain situations.

Common instances are: failing a Rally Test, choosing to Flee! as a Charge Reaction or failing a Break Test (without being caught by any Pursuing enemy unit). When making a Flee Move, follow these steps:

- 1 Roll the Flee Distance (normally this is 1D6+4").

Each Flee Move starts by Pivoting the unit to face a certain direction, determined as such:

- a. **Failed Rally Test:** Pivot the unit to face directly away from the closest non-**Shaken** enemy unit.

The direction is specified by a line from Centre of unit to Centre of unit. If there are multiple enemy units at equal distances, the opponent chooses which one of its units will be used to determine the direction of the Flee Move.

- 2 b. **Flee! Charge Reaction and failed Terror Tests:** Pivot the unit to face directly away from the Charging enemy unit.

The direction is specified by a line from Centre of unit to Centre of unit.

- c. **Failed Break Test:** Pivot the **Shaken** unit so that its Rear Facing is parallel with the Facing of the enemy it was Engaged with.

If multiple units are eligible, the opponent chooses which of their units will be used to determine the direction of the Flee Move.

- 3 Move the **Shaken** unit straight forward by the distance rolled.

A Flee Move, including the initial Pivot, ignores the Unit Spacing rule, and can move through any Obstructions.

The move still cannot end with the Fleeing unit overlapping any other unit or Impassable Terrain: continue the move in a straight line until the unit can be placed on the battlefield without overlapping any Obstructions.

- 4 *Remember that the unit ignores the 'Unit Spacing' rule, which means it can be placed within 1" of other units or Impassable Terrain.*

- a. If the Fleeing unit moves through any friendly unit, this unit must take a Panic Test.
- b. If the Fleeing unit moves through an Impassable Terrain or any enemy unit it was not engaged in Combat with in this Phase, treat these as **Dangerous Terrain (4+)**.

- 5 If the Flee Move brings the unit into contact with the Battlefield Edge, or with an enemy unit that has declared a Charge against it during the same phase, the unit is removed as a casualty.

MAGICAL EFFECTS

1 Magical Move

Some spells or abilities allow a unit to perform a **Magical Move**.

This move is performed as if it were the Movement Phase, following the same rules and restrictions: the unit can perform a Move Manoeuvre.

Characters and other Attachable Models can join or leave units.

Restrictions that apply during the Movement Phase (e.g. units that are **Shaken** or **Engaged in Combat** cannot perform a Move Manoeuvre) still apply.

The distance that the **Magical Move** can be performed is specified in the spell or ability.

The target's Mobility is changed to **always** equal to the distance of the **Magical Move**, for the duration of the move.

*For example, an effect could be: 'The target may perform a 6" **Magical Move**'. This means the target can perform any normal Move Manoeuvre as if its Mobility was 6", including marching 12".'*

A unit can only perform a single **Magical Move** per Phase.

2 Summoned Units

Summoned units are units that are created during the game.

When **Summoning** a unit, all its models must be Deployed within the specified Range of the ability.

If the unit is summoned as a result of a spell with Type: 'Ground', at least one model must be placed on the targeted point, and all models must be within the spell's Range.

Summoned models must be placed following the Unit Spacing rule. If the whole unit cannot be Deployed, then no model can be Deployed.

Once summoned, the newly created unit operates as a normal unit controlled by the side that **Summoned** it. Summoned units do not award Victory Points to the opponent when they are removed as a casualty.

3 Recover Health Points

Some spells or abilities allow units and models **Recover** Health Points lost during the battle.

The amount of Health Points that can be **Recovered** is specified in the ability.

Recovering Health Points cannot bring back models that have been removed as casualties, and cannot increase a model's Health Points above its starting value (any excess Health Points are lost).

4 Raise Health Points

Raising Health Points is similar to **Recovering**, with the exception that it can bring back models that have been removed as casualties.

When **Raising** Health Points, lost Health Points on models in the unit (excluding Attachable Models) are first **Recovered**, followed by bringing back models.

Each raised model must fully recovered all its Health Points before another model can be raised.

The total number of models in the unit cannot exceed its starting number; any excess raised Health Points are lost. Raised models are placed in the Rear Rank if it is incomplete, or form a new Rear Rank if the current one is complete.

In units with only one rank, a raised model can either be placed in the Front Rank, or the player can declare the Front Rank complete and create a new rank behind it (*remember that a unit cannot voluntarily have more ranks than files, unless it is wide enough to have a Proper Rank*).

Any model that cannot be placed in a valid position, following the Unit Spacing rule, is lost.

Any used 'One use only' effects or destroyed equipment are not regained.

Raised models are subject to the same ongoing effects as their unit.

CHARACTERS

A Character is a significant and unique individual in the army, often possessing special abilities, skills, or powers that set them apart from regular troops. Characters are a special type of models that are recruited from the 'Characters' Army Category of an Army Book.

Unless stated otherwise, Characters follow the rules for **Attachable Models**, which means they can join other units.

1 Make Way

It can happen that a Character's unit is Engaged in Combat, while that Character is not itself in contact with any enemy model. When this happens, the Character may be eligible for a **Make Way** move.

To be able to perform a **Make Way** move, the Character:

- Must be in the first rank of its unit.
- Must not be in contact with any enemy models.
- Must not have a Mismatching Base.

☐ **Make Way** moves are performed during Combat Choices.

The Character switches positions with a Rank-and-File model (or models) in its unit that is in contact with an enemy.

The Character must end up in a valid position.

Normally this means that the Character can only swap positions with models in the Front rank.

2 General

An army may include a General.

This upgrade is **Legendary**.

The General gains **Commanding Presence** (see 'Model Rules').

3 Battle Standard Bearer

An army may include a Battle Standard Bearer.

This upgrade is **Legendary**.

A Battle Standard Bearer gives +1 Combat Score to its side in combat, and gains **Beacon of Courage (12")** (see 'Model Rules').

If the model has the option to buy Magic Items, it is allowed to buy a Banner Enchantment.

4 Character Mounts

When a Character selects a mount from the options available to it, the following rules apply to the combined model of a rider and its mount:

- **Height and Base:** use the Mount's Height and base.
- **Global and Defensive Characteristics:** the combined model has a single set of Global and Defensive Characteristics and Model Rules.
 - Generally, for both Global and Defensive Characteristics, the values from the mount's profile are used. Modifiers to the rider's Characteristics have no impact on the Global and Defence Characteristics of the mount, unless specifically mentioned otherwise, or in the following cases:
 - * If a value in the mount's profile is indicated as 'C', the corresponding value from the Character's profile is used instead, including any modifiers to it.
 - * If a value is written as 'C+X', increase the Character's value by X, and use that value as the whole model's.
 - * If a value is written as 'C-X', decrease the Character's value by X, and use that value as the whole model's.
 - *For example, a Character with 'Arm 2' is using a **Shield** (+1 Arm) while mounted on a Dragon with 'Arm 4': the combined model's Armour value is still only 4 (the Dragon's).*
If the same Character is instead mounted on a Warhorse with 'Arm C+2', the model's Armour value is 5 (2+1+2).
- **Offence Characteristics:** the rider and the mount each use their own Offensive Characteristics, Weapons and Attack Attributes.
- **Model Rules:** Model Rules also follow the principles described above, with the following specifications:
 - Attack Attributes and Weapons are applied only to the specific model part that has those rules.
 - Other Model Rules are applied to the combined model as a whole.
 - *For example, a Character with **Distracting** and **Lethal Strike** is mounted on a Warhorse.*
*The horse cannot benefit from **Lethal Strike**: since it is an Attack Attribute, it applies only to attacks from a single model part, the Character itself.*
*However, **Distracting** is neither an Attack Attribute nor a Weapon, and is therefore applied to the entire combined model.*

ATTACHABLE MODELS

Attachable Models are models that have the flexibility to 'join' other units as well as to operate by themselves. The most common type of Attachable Models are Characters. All Characters are Attachable Models, unless mentioned otherwise. In addition to Characters, a few other models are Attachable Models, such as those with the **War Platform** Model Rule.

1 Lone Attachable Models

Attachable Models can operate as a unit consisting of just themselves - a single model unit.

In this case, the normal rules for units apply to them.

2 Combined Units

Attachable Models that join other units form a 'Combined Unit'.

Once an Attachable Model has joined a unit, they are considered part of the unit for all rules purposes, unless specified otherwise.

2.A Joining other units

Attachable Models can join other units either by Deploying inside and simultaneously with the unit, or by moving into contact with the unit through a Move Manoeuvre.

Upon joining a unit, the unit that was joined cannot move further in the same Phase.

A Attachable Model ignores the Unit Spacing rule with regards to the unit it is about to join, and must have enough movement to reach its final and valid position within the unit, which normally means it must be able to reach its Front rank.

During the Player Turn in which an Attachable Model joins the unit, the Attachable Model and the unit are treated individually for the purpose of determining which model has moved or performed a March Move or not.

Units that are **Shaken** or Engaged in Combat cannot be joined by an Attachable Model.

The Attachable Model can choose any valid position it can reach with its move.

This includes moving through the unit it joins, maybe displacing other Attachable Models. Displaced Rank-and-File models are placed in rear ranks.

If the unit has a single rank, the Attachable Model or the displaced models can alternatively be placed on the side of the unit, forming a new file.

2.B Moving Combined Units

Combined Units are moved as a group, following the normal rules for moving units.

An Attachable Model can move within its unit's formation by swapping places with other models, as long as the resulting position is still a valid one (generally in the Front rank).

This can be done as part of the following moves:

- Move Manoeuvres (*Advance, March, and Reform Moves*)

- Pivots, including Post-combat Pivots and Post-Rally Pivots.

Note: this does not include Pivots occurring as part of a Flee or Pursue Move (including Overruns).

- Combat Reforms

Remember that additional restrictions apply to which positions are valid - see the 'Melee Phase' chapter.

Attachable Models are not allowed to move within their unit's formation under any other circumstances, such as when Charging, Aligning, Pursuing or performing a Flee Move.

2.C Placement within a Combined Unit

Unless stated otherwise, Attachable Models must be placed in the front rank of the unit they are joined to.

If this is not possible (e.g. due to the Front rank already being filled with other Attachable Models), they must instead be placed as far forward as possible in the unit.

2.C.a Matching Bases

In Combined Units with both Attachable Models and Rank-and-File models, an Attachable Model is considered to have a Matching Base if the size of its base is the same as that of the Rank-and-File models in the unit, or if the size of its base is a multiple of the size of the Rank-and-File models' bases in the unit.

*E.g. a 40x40 mm base in a unit where every model has a 20x20 mm base. Models on Matching Bases are placed inside the formation of the unit they join, normally displacing another model or models. If the model has a larger base than the Rank-and-File models, it counts as occupying all ranks its base covers for Proper Ranks calculations. If a model with a Matching Base has a longer base than the Rank-and-File models, it is possible that the unit finds itself with more than one incomplete rank, if all incomplete ranks consist entirely of models with such bases (e.g. the rear parts of long bases of models such as **War Platform** can form several incomplete ranks).*

A model cannot join a unit with more than one rank if its base is wider than the unit is, nor can a unit Reform into a formation narrower than any model joined to it.

2.C.b Mismatching Bases

Any base that is not a Matching Base is considered a 'Mismatching Base', such as an Attachable Model on a 40×40 mm base in a unit where Rank-and-File models have 25×50 mm bases. A model with a Mismatching Base is always placed in contact to the side of the unit, aligned with its Front.

Each unit can only include two models with Mismatching Bases, one on each side.

These models are considered to be only in the Front rank, and are not counted when determining the number of models in each rank for Proper Ranks. They form a separate file of one model each.

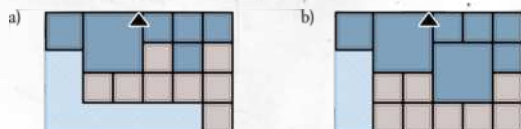

Figure 13: Matching and Mismatching Bases.

a) A Character on a Mismatching Base is placed next to the unit. Characters on Matching Bases are placed inside the unit, as far forwards as possible. This unit is considered to have 6 files and 4 ranks.

b) When an Attachable Model joins the unit, the small Attachable Model in the second rank must be moved to the side in order to have all Attachable Models as far forwards as possible.

2.C.c Units Made of Only Attachable Models

For Combined Units consisting entirely of Attachable Models, Matching or Mismatching Bases are determined differently since there are no Rank-and-File models. In such a case, the owner of the unit decides, when the unit is first formed, which model's base to use in place of Rank-and-File models. Models with the same base, or bases that are a multiple of it, are then considered Matching.

If the chosen model leaves the unit or is removed as a casualty, a new model must be chosen as reference for Matching/Mismatching Bases. If possible, this choice must be made so that as few models as possible change their status regarding Matching or Mismatching (normally this means choosing a model with the same base as the model that left the unit).

2.C.d Rank-and-File Models in a Combined Unit Wiped Out

When all the Rank-and-File models in a combined unit are wiped out, but there are still Attachable Models left, they form a smaller combined unit. This smaller unit is treated as the same unit for effects and Panic Tests.

2.D Leaving a Combined Unit

Attachable Models can leave a combined unit with a Move Manoeuvre, or by Charging out of it, assuming they are able to move freely.

This means Attachable Models can not leave units while Engaged in Combat, if their unit has already moved, or if they are **Shaken**.

When leaving a combined unit they are allowed to join other units, however they cannot rejoin the unit they have left in the same phase.

Continuous effects (i.e. all effects without a specified duration, such as most Banner Enchantments) continue to affect all parts of the previously Combined Unit.

Duration: One Phase.

2.D.a Move Manoeuvres out of a Unit

To leave a unit, move the Attachable Model out of the unit using a Move Manoeuvre. Attachable Models ignore the Unit Spacing rule with regards to the unit they are leaving.

The unit that is left behind is not considered to have moved, and is free to perform its own move later in the Phase.

2.D.b Charging out of a Unit

An Attachable Model in a Combined Unit may Declare a Charge on its own during the Charge Phase, i.e. Charging out of the unit and leaving the unit behind.

When doing this, apply the following rules:

- Use the position of the Combined Unit for determining which Facing of the enemy unit the Charge is Declared towards, and for determining the Flee direction if the Charged unit performs a Flee! Charge Reaction.
- Use the Attachable Model for determining Line of Sight and distance to the enemy unit.
- Attachable Models ignore the Unit Spacing rule with regards to the unit they are leaving.
- The unit itself (including other Attachable Models in the unit) cannot Declare Charges in the same Player Turn.
- If the Charge is successful, move the Attachable Model out of the unit by Charging as normal.
If there is not enough room to physically move the model out of the unit, the Charge cannot be Declared.
- If the Charge is not successful, the Attachable Model makes a Failed Charge Move out of the unit.
If the Failed Charge Move is too short to place the Attachable Model outside 1" of the Combined Unit, the Attachable Model remains in the Combined Unit, and the entire Combined Unit performs the Failed Charge Move instead.
- Once the Attachable Model declares a Charge, it uses its own Charge Speed and position. For all effects and rules that affected the combined unit before the charge, such as Banner Enchantments, treat the charging Attachable Model as a part of the Combined Unit until it finishes its Charge Move or Failed Charge Move.

TERRAIN

Each battlefield is unique, with opportunities and challenges presented by the lie of the land. The ability to use both geographical features and man-made structures to your advantage can make all the difference. Some landscapes can be so treacherous that your forces may even perish if they lack sufficient caution.

1 Terrain Rules

Terrain represents distinct areas on the battlefield that introduce additional rules that affect models within or interacting with it. These areas are typically represented by modelled terrain that are placed on the Battlefield. The most common Terrain Features in the game are explained below.

In addition, rules for more Terrain Features can be found in the Season Pack.

1.A Open Terrain

Open Terrain normally does not have any effect on Line of Sight, Cover, or movement. All parts of the Battlefield that are not covered by any kind of Terrain Features are Open Terrain.

1.B Covering Terrain (X, Height Y)

Covering Terrain contributes to Cover when drawing Line of Sight through it.

The bracket (X) indicates whether the terrain contributes to Soft Cover or Hard Cover.

Certain Terrain Features (such as Fields and Ruins) only count as Covering Terrain for units in contact with them. Ignore any Terrain Feature the shooter itself is located in for Cover purposes.

Covering Terrain always has a bracket (Height Y) associated with it that corresponds to the largest Height where this Terrain Feature can contribute to Cover.

For example, Fields are Covering Terrain (Height 3), which means that anything with Height 4-5 cannot claim Soft Cover from Line of Sight drawn through a Field they are in contact with.

Sometimes terrain will have "Covering terrain (X) for units in contact". This rule is meant to represent terrain that can be used for Cover, but is not tall enough to always provide it. Therefore, a unit needs to be close enough to benefit from it.

1.C Dangerous Terrain (X+, Y)

A unit must take a Dangerous Terrain Test at the end of its move if it has been in contact with a Dangerous Terrain during one the following moves: Charge Move, Failed Charge Move, March Move, Flee Move, or Pursue Move. Dangerous Terrain Tests are performed by rolling a number of D6.

For each roll of X+, the unit suffers a hit that wounds automatically with **always** AP 10.

(Note: Special Saves can still be taken, and this is not an attack).

The number of dice the unit must roll is equal to half the number of models in it (rounding fractions up), multiplied by the models' Height. If a value is given for 'Y', only models fulfilling these criteria take the Dangerous Terrain Test.

For example, a unit of 19 Height 1 Dwarven Warriors would roll 10 dice ($19 \div 2 \rightarrow 10, \times 1$), while a unit of a single Height 5 Dragon would roll 5 dice ($1 \div 2 \rightarrow 1, \times 5$).

If one of the above-mentioned moves was performed by a Unit that has been in contact with several Terrain Features that are Dangerous Terrain, every Health Pool it contains must make a Dangerous Terrain Test for each Terrain Feature with Dangerous Terrain it has been in contact with, one at a time, removing any casualties caused by the first test before calculating the number of dice that must be rolled for the next test.

If a type of model is indicated in the brackets ('Y'), any model not fulfilling this criteria is considered Height 0 for Dangerous Terrain Test purposes.

- Only Health Pools that have actually been in contact with a Dangerous Terrain Feature need to roll any Dangerous Terrain Test.
- Calculate the number of Dangerous Terrain Tests to roll for each Health Pool that has been in contact with the Terrain Feature, and roll the tests separately. The damage from each test is allocated towards the Health Pool that the test was rolled for.

For example, a unit of 10 Orc Warriors (Rank-and-File models, Height 1) is joined by two Orc Characters on Grunter (Height 2). If the unit moves through Dangerous Terrain in such a way that one of the Characters never touches the Terrain Feature, the Dangerous Terrain Tests are rolled in the following way: 5 dice for the Rank-and-File Health Pool ($10 \div 2, \times 1$), 2 dice for the one Character that came in contact with the Terrain Feature ($1 \div 2 \rightarrow 1, \times 2$), and no test for the other Character.

1.D Disruptive Terrain

Units in contact with a Disruptive Terrain are ignored when calculating Rank Bonus.

*Note: Units in Disruptive Terrain are still considered for the purpose of **Surrounded**.*

1.E Opaque Terrain

Line of Sight cannot be drawn through Opaque Terrain, but can be drawn into or out of it *note that this means the Terrain Feature contributes to Hard Cover.*

Models always ignore Opaque Terrain they are inside for drawing Line of Sight.

2 Terrain Features

A Terrain Feature is a topographical area on the Battlefield that may be a mixture of Dangerous, Opaque, or Covering Terrain and may possess its own set of additional rules. Most Terrain Features follow the corresponding rules:

2.A Fields

Fields can be represented in the game for example by meadows of tall grass, or agricultural enclosures.

Fields have the following rules:

- **Covering Terrain (Soft Cover, Height 3)** for units in contact.
- **Flammable:** units in contact gain **Weakness (Flaming Attacks)**.

2.B Forest

Forests can be represented for example by jungles, brushwoods, or small groves of trees.

Forests have the following rules:

- **Covering Terrain (Soft Cover, Height 5).**
- **Dangerous Terrain (6+, Mount).**
- **Disruptive Terrain.**

2.C Hills

Hills can be represented for example by elevated plateaus or burial mounds.

Hills have the following rules:

- **Elevated Position:** a model is considered to have an Elevated Position if it is fully on a Hill.
For the purposes of determining Cover and for drawing Line of Sight to or from a model with Elevated Position, ignore intervening models that do not have an Elevated Position.
- **Opaque Terrain.** Remember that Line of Sight can still be drawn into and out of the Terrain Feature.

2.D Impassable Terrain

Impassable Terrain can be represented for example by monoliths, cliffs, massive boulders, or buildings.

Impassable Terrain has the following rules:

- **Dangerous Terrain (4+)** for units making Flee Moves through it.
- **Impassable:** models cannot move into or through an Impassable Terrain Feature (except as part of a Flee Move).
- **Opaque Terrain.**

2.E Ruins

Ruins can be represented for example by rubble, abandoned farmsteads or ancient sites of symbolic or arcane power.

Ruins have the following rules:

- **Covering Terrain (Hard Cover, Height 3)** for units in contact.
- **Dangerous Terrain (6+).**

2.F Walls

Walls can be represented for example by stone, wood, or makeshift structures.

Walls have the following rules:

- **Covering Terrain (Hard Cover, Height 3)** for units in contact.
- **Dangerous Terrain (6+, Construct).**
- **Fortified Position Attack Attribute:** Melee Attacks from Charging models that are in contact with a Wall suffer a -1 to hit penalty.
This also applies to Supporting Attacks made by Charging models over models in contact with a Wall, and to attacks across gaps where the model's virtual extended base would be in contact with a Wall.

2.G Water Terrain

Water Terrain can be represented in the game for example by ponds, swamps, or rivers.

Water Terrain has the following rules:

- **Dangerous Terrain (6+, Metal Armour).**
- **Disruptive Terrain.**
- **Soaked:** units in contact gain **Immune (Flaming Attacks)**.
- **Unsure Footing:** models in contact cannot use **Impact Hits** or **Stomp Attack**.

MODEL RULES

Model Rules are rules that apply to individual models or specific parts of models, as described in their unit entry.

1 Duplicate Model Rules

Most Model Rules are not cumulative. This means that if a model or a model part gains the same rule multiple times, the effects do not stack or provide extra benefits.

This includes Model Rules with different keywords attached (such as 'Multiple Wounds (towards Height 2)' and 'Multiple Wounds (towards Height 3)'), which are considered to be the same Model Rule, meaning that both instances cannot be applied simultaneously.

In such cases, the owner may choose which instance of the Model Rule to use at any time.

2 Model Rules and Units

Even though Model Rules are given to individual models, some of them function on a unit level, such as those dictating how entire units can move or operate.

Model Rules differentiate between the following cases (The same keywords also apply to Properties):

- **Units entirely with X:** whenever a Model Rule is referred to as units 'entirely with' the rule, this refers to **units where every single model in it has the Rule 'X' or the Property 'X'**.
- **Units containing X:** whenever a Model Rule is referred to as units 'containing' the rule, this refers to **units where at least one model in it has the Rule 'X' or the Property 'X'**.
- **Units not containing X:** whenever a Model Rule is referred to as units 'not containing' the rule, this refers to **units where no single model in it has the Rule 'X' or the Property 'X'**.

3 Subtypes and Keywords

Attack Attributes

'Attack Attributes' is a subcategory of Model Rules.

While most Model Rules apply to the entire model (including all model parts on the same base), Attack Attributes are an exception, and only affect individual model parts, or even individual attacks.

Attack Attributes only affect Melee Attacks, unless otherwise stated.

There is one main exception to this: an Attack Attribute given specifically to a weapon, a spell or attack will affect it regardless of whether it would normally only be applicable to Melee Attacks.

Attack Attributes are therefore written under the 'Offensive Characteristics' part of a model entry, only affecting the specific model part they are listed under.

However, if an Attack Attribute is given to a unit (e.g. as a result of a spell), it applies to every model part in that unit; if given to a model, it applies to all parts of that model.

An Attack Attribute can also be given to a weapon, a spell, or an attack. Such Attack Attributes only affect attacks made with those specific sources. They will not affect other attacks made by the same model part (unless given specifically to another weapon, spell or attack by that model part).

Weapons

'Weapons' is a subcategory of Model Rules.

Just as with Attack Attributes, a Weapon can only be used by the specific model part with the rule.

There are two types of weapons:

- **Melee Weapon:** a model part can only use a single Melee Weapon at a time, and only when Engaged in Combat. If a model part is equipped with multiple Melee Weapons, the weapon it uses is determined in the First Round of Combat, with the following priority order:
 1. An Enchanted Weapon
 2. Any weapon that is neither a Hand Weapon, nor an Innate Weapon
 3. A Hand Weapon
 4. An Innate Weapon

This choice is then kept until the model is no longer Engaged in Combat.

- If the Melee Weapon confers any modifier to Offensive Characteristics, as well as Attack Attributes, those effects are applied only to the model part's Standard Melee Attacks.

- If the Melee Weapon confers any modifier to Global or Defensive Characteristics (Charge Speed, Mobility, Courage, Defensive Skill, Hit Points, Resilience, and Armour), as well as Model Rules that are not Attack Attributes, those effects are applied to the whole model (or model part, see rules for Character Mounts for details when and how the Characteristics of mounts are affected) at all times, except while using a different Melee Weapon.
- If the Melee Weapon confers any variable modifier (such as those based on a dice roll), the value of that modifier is determined at the start of the Agility Step in which the weapon is used.
- **Shooting Weapons:** Shooting Weapons are used for making Shooting Attacks.
Each model part can only use one Shooting Weapon per phase.
A Shooting Weapon generally has an Aim value, shown in brackets after the name of the weapon. The rules for each Shooting Weapon define its maximum Range, the number of Shots fired per attack, its attacks' Strength and Armour Penetration, as well as any potential Attack Attributes applied to them.

Keywords

Model Rules include keywords to help define their effects.

These keywords can be used directly within the Rulebook, and always apply to rules that have that keyword.

Alternatively, keywords can be specified for individual rules on specific models, spells, or weapons. In this case, this is indicated within brackets following the name of the rule.

List of Model Rule keywords:

- **Cumulative:** effects from multiple instances of a Model Rule with the 'Cumulative' keyword are combined and add up.
- **Distance Modifiers:** written as a number followed by the " symbol. Any distance in the Model Rule description is replaced by that number.
For example, **Vanguard (3" Mob)** means that the model can perform a **Vanguard** move, but its **Mobility** is **set to 3** instead of the normal 6.
- **Shooting or Melee & Shooting:** an Attack Attribute with the keyword 'Shooting' only affects attacks that the model part makes with Shooting Weapons, while an Attack Attribute with the keyword 'Melee & Shooting' affects both Melee Attacks and Shooting Attacks made by the model part.
- Remember that the default if none of these keywords are used is that Attack Attributes only affect Melee Attacks.
For example, by default, **Poison Attacks** only affect Melee Attacks. However, if a model part has **Poison Attacks (Shooting)**, this means the **Poison Attacks** Model Rule only applies to attacks made with that model part's Shooting Weapons, unless it also has **Poison Attacks** or **Poison Attacks (Melee & Shooting)**.
- **Special Attacks:** a model part with such a rule can make a special Melee Attack (which is not a Standard Melee Attack) that hits automatically.
Since it is not a Standard Melee Attack, this attack can usually not be made as a Supporting Attack and does not suffer from Restricted Attacks (see the 'Melee Phase' chapter).
Special Attacks can be allocated onto any Attachable Model in units the attacker is Engaged in Combat with, if they are either or both:
- Of a different Height than the Rank-and-File models in the unit.
- In a unit with fewer than 5 Rank-and-File models (or fewer than 3 if they are of Height 3-5).
- **Towards X:** the Attack Attribute only applies if the attack is allocated to a specific type of enemy model or an enemy model that has certain rules or Properties.
The conditions are given as 'X'. If more than one type of enemy is relevant, those types are separated by the word 'or'. If multiple conditions must be fulfilled simultaneously, then they are separated by the word 'and'.
For example, **Multiple Wounds (2, towards Height 4 and Beast, or Height 5)** means that the rule **Multiple Wounds** is applied only when the attack is allocated either to a model that is both Height 4 and has the Property **Beast**, or to a model that is of Height 5, regardless of whether the model has the Property **Beast**.
- **Against X:** the Model Rule only applies when the model is attacked by a certain type of model or by a model or attack with certain rules or Properties.
For example, **Hard Target (against Lethal Strike)** means that the rule **Hard Target** applies only when the model is attacked by an attack with the Attribute **Lethal Strike**. See the rules under 'Towards X' for how to interpret the words 'or' and 'and'.
- **Unique Keywords:** in addition to the standard Model Rule keywords defined above, certain Model Rules have unique keywords. These are defined in their respective rules.

4 List of Model Rules

Aegis (X)

Aegis is a Special Save, with a value indicated in brackets ('X').

If 'X' is given as a modifier and with a maximum value (e.g. '+2'), the model gains this as a modifier to all its Aegis Special Save rolls, which can **never** be increased to rolls better than 3+. If the model does not have Aegis, it instead gains **Aegis (7 - X+)**. For example, a model without Aegis that gains Aegis (+2) will gain Aegis (5+).

Note that Aegis Saves cannot be taken against attacks with **Divine Attacks**.

Afflict (X)

Units in contact with one or more enemy models with **Afflict (X)**, suffer the effects given by 'X'.

A unit can only be affected by one instance of **Afflict (X)** with an identical 'X' value at a time.

If the brackets from two instances of **Afflict** are not identical (i.e. they have a different 'X'), then they are considered different rules: apply the effects of both.

Ambush (X)

Any unit entirely with **Ambush** may choose to not be Deployed normally, but to be placed in Ambush by simply not being placed on the Battlefield during Deployment. A unit placed in Ambush will arrive on the Battlefield later during the game. From your Player Turn 2 and onwards, roll a D6 for **each** unit placed in Ambush at the start of the Movement Phase: every unit that rolls a 3+ will arrive on the Battlefield if possible.

During your Player Turn 5 and 6, this roll is always considered to have rolled a 3+.

When a unit arrives on the Battlefield, choose a point as specified by 'X'. If no suitable point is available where the unit can be placed on the Battlefield, the unit cannot arrive on the Battlefield this turn.

Deploy each unit arriving on the Battlefield with at least three of its four corners within 6" from the chosen point in any valid formation following the **Unit Spacing** rule.

There must be no other units or Impassable Terrain directly located between any point on the Unit Boundary and the chosen point. See the figure below for examples.

Ambushing units count as having performed an Advance Move when they arrive on the Battlefield, and cannot perform any Move in the same Phase.

If an Ambushing unit does not arrive on the Battlefield by the end of the game, it is removed as a casualty.

An **Attachable Models** placed in Ambush can be Deployed joined to a unit placed in Ambush with the same 'X' value, following the usual restrictions. It may choose a unit to be joined to during each of your Player Turns, before rolling to see if your Ambushing units arrive on the Battlefield.

Make a single dice roll for the **Combined Unit**.

Note: **Attached** has no effect on this; the choice of a unit to be Deployed in Ambush in may change each turn.

A unit arriving on the Battlefield in Game Turn 6 loses **Scoring**.

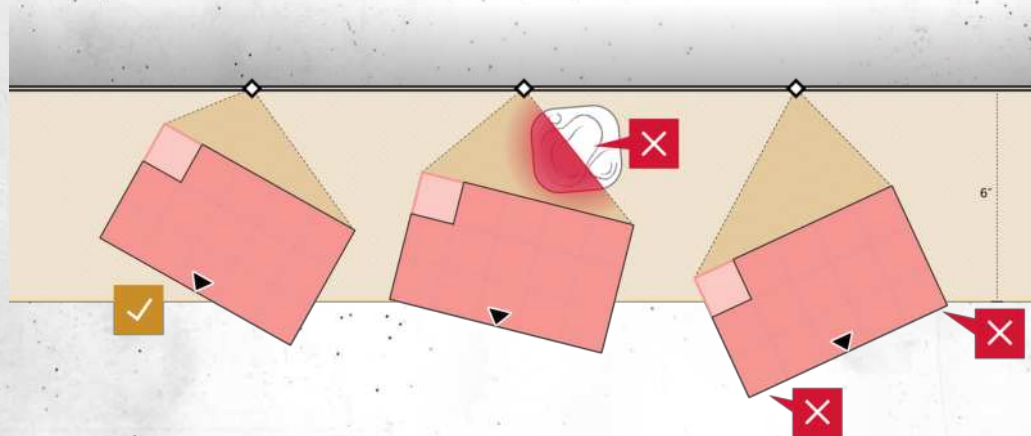

Figure 14: Deploying Ambushing units.

In these examples, the unit has **Ambush (Battlefield Edge)**. The unit with the yellow check mark is placed in a valid position, while the two units with red crosses are not: the left one because there is an Impassable Terrain Feature between the Unit Boundary and the chosen point, and the right one because parts of the unit are more than 6" away from the chosen point.

Attached

This model **must** be Deployed inside a unit containing a Rank-and-File model, and cannot voluntarily leave its unit.

Beacon of Courage (X")

Friendly models in units within X" of a **non-Shaken** friendly model with **Beacon of Courage** benefit from **Courageous**. **Courageous**: a unit containing **Courageous** must reroll failed **Courage Tests**.

Bodyguard (X)

While a Character is joined to a unit containing **Bodyguard** and the Character fulfills at least one of the requirements defined by 'X' that, Character then benefits from **Stubborn**.

In addition, if the unit it is joined to has at least one Proper Rank, the unit is considered to be **Steadfast** for the purposes of **Break Tests**.

*Note: units entirely with **Unstable** do not take Break Tests.*

Captain

A unit containing **Captain** gains the following additional rules:

- If the unit has a **Standard Bearer**, it is considered to be within range of its Battle Standard Bearer's* **Beacon of Courage** rule.
- If the unit has a **Musician**, it is considered to be within range of its General's* **Commanding Presence** rule.

A unit can only contain a single **Attachable Model** with **Captain**.

**Provided such a model is on the Battlefield at all.*

Channel (X) – Cumulative

A model with **Channel** may add X Magic Dice during the **Siphon the Veil** step of its Magic Phase.

*Note: **Shaken** models may not use this rule.*

Commanding Presence (X)

Friendly models in units within 12"* of a **non-Shaken** friendly model with **Commanding Presence** **set** their Discipline to that model's Discipline: apply any modifiers to the Discipline of the model with **Commanding Presence** first, then **set** any affected models' Discipline to that modified value (*note: ignore this rule if the model's original value is higher*).

If any rules, properties, unit names, etc. are mentioned in brackets ('X'), it means that only units possessing these qualities can benefit from the model's **Commanding Presence**.

**Unless there is a distance in the bracket, then use that instead.*

Courageous

A unit containing **Courageous** must reroll failed **Courage Tests**.

Disciplined

Command Tests taken by a unit containing **Disciplined** benefit from **Minimised**.

Distracting – Cumulative

Melee Attacks allocated against a **Health Pool** with **Distracting** suffer -1 to hit.

Ignore **Distracting** if the final to hit chance would be worse than 5+.

Dying Blow

When a model with **Dying Blow** is about to be removed as a casualty during any Agility Step of a Round of Combat it is fighting, remove it instead at the end of Agility Step 0.

Emplacement

Units entirely with **Emplacement** cannot Declare Charges, perform March Moves or Pursue Moves (*including as part of a **Random Movement***), or choose the Flee! Charge Reaction. If a unit entirely with **Emplacement** is about to perform a Flee Move, it is instead removed as a casualty.

The model cannot shoot in the same Player Turn that it has performed a **Move Manoeuvre**.

Units entirely with **Emplacement** can draw Line of Sight in any direction from any points on their base (*i.e. they are not limited by their Front Facing or Front Arc*).

*When determining facing it is shooting towards, measure from the centre of model with **Emplacement's** base, instead of its Front Facing.*

Engineer (X)

Once during each Shooting Phase, a **non-Shaken** and Unengaged model with **Engineer** can select a friendly model with 'X' in a unit within 6": the selected model gains +1 to hit with Shooting Attacks, to a maximum of 3+, with Duration: **One Phase**.

No model can be affected by more than one instance of this effect simultaneously.

The use of this rule must be declared before shooting with the selected model.

Exclusive (X) – Cumulative

This rule limits which units an **Attachable Model** is allowed to join.

- **Attachable Models** with **Exclusive (X)** can only join units containing 'X'.
- Non-Attachable Models with **Exclusive (X)** can only be joined by Attachable Models with 'X'.
- If a unit has multiple instances of **Exclusive**, all criteria must be fulfilled together.

The specific criteria for 'X' can be unit names, Model Rules, Properties, upgrades, etc.

*If a model has both **Exclusive** and **Attached**, apply all requirements from both rules (remember that a model that cannot be Deployed is considered a casualty).*

Fearless

A unit containing **Fearless** automatically passes **Panic Tests**, cannot choose Flee! as a Charge Reaction (unless it is already **Shaken**, or the entire unit has **Feigned Flight**).

In addition it ignores the effects of **Horror**.

Feigned Flight

A unit entirely with **Feigned Flight** automatically passes any **Rally Test** it takes after voluntarily becoming **Shaken**.

In addition, models with **Fearless** and **Feigned Flight** ignore **Fearless** for the purposes of choosing 'Flee!' as a Charge reaction. *I.e. if every model with Fearless in a (combined) unit has Feigned Flight, the unit can 'Flee!'.*

Fly

Units entirely with **Fly** ignore Terrain Features, Open Terrain and other units during **Move Manoeuvres** and **Charge Moves**. The unit must follow the **Unit Spacing** rule at the end of any of its moves, and Terrain Features and Open Terrain from which the model starts or ends its move still affect it.

The charged unit is not ignored during a Charge Move, and there must be room for the unit's Front Facing to be placed in contact with the charged unit **before** the **Initial Align Move**.

Frenzy

Units containing **Frenzy** must always choose to **Pursue** (including **Overrun**) when able to.

General

A model with this rule is always the **General**.

*Note: this means than only one model with **General** can be included in an Army List.*

Ghost Step

A unit entirely with **Ghost Step** ignores Terrain Features and Open Terrain when moving.

The unit must follow the Unit Spacing rule at the end of its move.

A Health Pool with **Ghost Step** never fulfils the criteria for which models must take Dangerous Terrain Tests due to Terrain Features (but still needs to take Dangerous Terrain Tests from other sources than Terrain Features, such as when making a Flee Move through an enemy unit).

If the unit ends a move inside Impassable Terrain, backtrack the move to the unit's last valid position, unless as part of a Flee Move, in which case the standard Flee Moves rules apply.

Hard Target (X) – Cumulative

Shooting Attacks allocated against a **Health Pool** with **Hard Target** suffer -X to hit.

Hidden

The model is not Deployed as normal.

Instead, at the start of any Player Turn, it may choose a friendly Rank-and-File model, which satisfy the following criteria:

- The model with **Hidden** could normally have joined the unit.
- The model with **Hidden** has an identical base size and Height as the Rank-and-File models in the unit.
- The unit is not **Shaken** and is not a **Summoned unit** but it can be Engaged in Combat.

After choosing an eligible unit, follow these steps:

- Remove a Rank-and-File model, with the same base size as the model with **Hidden**, from the front rank of the chosen unit as a casualty.
- Deploy the model with **Hidden** where the removed model was positioned.

If the chosen unit is engaged in Combat when being joined by a model with Hidden, consider the model with Hidden to be in **First Round of Combat** for all rules purposes, with Duration: **End of Turn**.

*Note: **Attachable Models** with **Hidden** can still be Deployed using the **Hidden** rules.*

Hit and Run

A unit entirely with **Hit and Run** in contact with an enemy unit **may** choose to voluntarily become "Broken" at the start of 'Take Break Tests' (*Round of Combat, 3.C*). In that case, the unit is considered to have failed a Break Test and is ignored for the rest of step 3.C.

If the unit was on the winning side of the Round of Combat, the enemy cannot Pursue.

*Note: this means units with **Supernal** or **Unstable** suffer no Health Point loss if they voluntarily become "Broken".*

Horror

Flee Moves from enemy units made in the following situations gain **two** instances of **Minimised**:

- Flee! Charge Reactions declared when Charged by a unit containing **Horror** (*Flee! Charge Reactions declared when later Charged by other units are unaffected*).
- Breaking from Combat while in contact with one or more units containing **Horror**.

*Remember that units containing **Fearless** are unaffected by this rule.*

Immune (X)

Attacks with the Attack Attributes or Properties stated in brackets ('X') allocated against a model with **Immune (X)** lose those Attack Attributes or Properties.

Insignificant

Units entirely with **Insignificant** do not cause Panic Tests on units not containing **Insignificant** when making **Flee Moves** through them.

Light Troops

A unit entirely with **Light Troops** can perform **Reform Move Manoeuvres** up to twice its Mobility (*instead of the normal half Mobility*).

If, while doing a Reform Move Manoeuvre, its centre moves further than its Mobility, the move is considered a March Move for the purpose of rules triggered due to Marching (*e.g. Dangerous Terrain Test and, if **Undead**, being restricted from performing a March Move, etc.*).

For the purpose of shooting, this is still a Reform Move. *I.e. the unit can shoot if moving further than its Mobility.*

Note: this rule has no effect on other Move Manoeuvres, including March Moves.

A unit containing **Light Troops** is **always** considered to have zero Proper Ranks; ignore Attachable Models with **Light Troops** joined to a unit for this purpose, unless the unit consists of only Attachable Models.

Magic Resistance (X)

Whenever an enemy spell targets one or more friendly units containing **Magic Resistance**:

- Identify the highest Magic Resistance value across all targeted friendly units
- Reduce the Casting Roll by this value

Mindless

A unit entirely with this rule automatically passes its **Command Tests** for **Combat Reform**, and automatically fails its **Command Tests** for **Redirecting Charges**.

Musician

Musician is a unit-wide upgrade, normally represented by the presence of a regimental musician.

When performing a **Reform Move** or a **Combat Reform**, a unit containing a **Musician** may change the number of its files by ± 5 rather than the normal ± 1 .

In addition, units containing **Musician** benefit from a +1 Discipline modifier when taking **Command Tests**.

*Note: **Musician** interacts with **Captain**.*

Parry

Against Melee Attacks made by an attacker Engaged in the models Front Facing, the Defensive Skill of a model with **Parry** is **always** at least equal to the Offensive Skill of the attacker.

*Remember that since **Parry** provides a modifier to a Defensive Characteristic, its effects do not apply to a Character on a mount that has its own Defensive Skill.*

Random Movement (X")

Units entirely with **Random Movement** do not follow normal rules for Charging, Move Manoeuvres, Pursue Moves or Flee Moves.

Instead, apply the following:

- During the Charge Phase, the unit cannot Declare any Charges.
- At any time the unit would perform a Move Manoeuvre, it performs a **Pursue Move** instead (see the 'Melee Phase' chapter), with the following exceptions:
 - It **must** move in the Movement Phase if allowed to do so, and it must do so before any units without **Random Movement** have performed their Move Manoeuvres.
 - It moves the distance stated in brackets ('X').
 - It can choose in which direction it will move (the owning player must choose the direction **before** rolling the Pursuit Distance).
 - It does not take Dangerous Terrain Tests, unless Charging.
 - It treats the Battlefield Edge as Impassable Terrain.
 - That move counts as an Advance Move for the purpose of Moving and Shooting.
- The unit's Pursue and Flee Moves use the distance stated in brackets ('X') instead of the normal distance.
- The unit cannot perform any **Magical Move** nor use **Vanguard**.

Whenever a rule requires the Mobility or Charge Speed of a model with this rule, use the potential maximum value of 'X' (eg. if 'X' is '2D6"', then consider the Mobility and Charge Speed to be equal to 12").

It also means that effects that modify its Pursue Distance, such as **Maximised** and **Minimised**, also affect its moves.

Regeneration (X)

Regeneration is a Special Save, with a value indicated in brackets ('X').

If 'X' is given as a modifier and with a maximum value (e.g. '+2'), the model gains this as a modifier to all its Regeneration Special Save rolls, which can **never** be increased to rolls better than 3+. If the model does not have **Regeneration**, it instead gains **Regeneration (7 - X+)**. For example, a model without **Regeneration** that gains **Regeneration (+2)** will gain **Regeneration (5+)**.

*Note that Regeneration Saves cannot be taken against attacks with **Flaming Attacks**, nor against attacks with **Lethal Strike** that roll a '6' to wound.*

Resistance

Attacks allocated against the model's **Health Pool** must reroll successful to-wound rolls.

If **Resistance** is associated with an Attack Attribute, Property or Rule in brackets ('X'), then it only applies against attacks with that Attack Attribute or made by a model with that Property or Rule.

Resolute

A unit containing **Resolute** and that has at least one **Proper Rank** is considered to have one additional **Proper Rank** when Engaged in Combat.

*Note: this is applied before applying the effects of **Surrounded**.*

Scout

Units entirely with **Scout** are not required to be **Deployed** inside their Deployment Zone: instead, they can be Deployed anywhere on the Battlefield, at least 12" away from the opponent's Deployment Zone.

A unit that starts the game outside its own Deployment Zone cannot declare a Charge in the first Player Turn of the first Game Turn.

Shield

A model with **Shield** is considered to be **using a Shield** at all times, except during the Melee Phase if it is using a **Two-Handed** Melee Weapon.

A model **using a Shield** gains +1 Arm.

In addition, any Height 1-3 model using a Hand Weapon while **'using a Shield'** gains **Parry**.

*Note: **Shield** provides no benefit against Melee Attacks when using a **Two-Handed** Melee Weapon.*

*Remember that since **Shield** (and **parry**) provide modifiers to Defensive Characteristics, their effects do not apply to a Character on a mount that has its own Defensive Skill or Armour.*

Skirmisher

Units containing **Skirmisher** adopt a unique formation, called a 'Skirmish Formation'. Instead of being in contact with each other, these models are placed 12.5 mm apart from each other (*roughly half an inch, see the figure below*). These gaps between the models are considered part of the unit for Cover and Line of Sight purposes, and have the same Height as the unit.

*Other than this gap between models, units with **Skirmisher** follow the normal rules for forming units and therefore have a Front, two Flanks, and a Rear Facing, can perform Supporting Attacks, and so on.*

Units in Skirmish Formation can only be joined by **Attachable Models** that have the same Height as the unit.

Unless an Attachable Model has the exact same base size as all Rank-and-File models in the unit, it is considered Mismatched for the purpose of placement within the unit.

*The unit ceases to be in Skirmish Formation when all models with **Skirmisher** have been removed. When this happens, contract their Skirmish Formation into a normal formation when returning the unit into a valid formation, without moving the centre of the first rank. If Engaged in Combat, nudge any unit as normal to maintain contact.*

See figure 15 for an illustration of this rule.

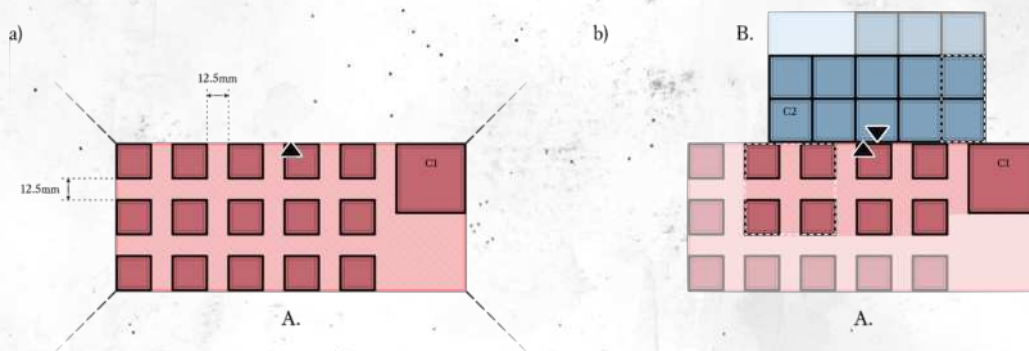

Figure 15: Skirmish formation.

An example of a unit in Skirmish Formation with a joined Mismatching Character. All models are 12.5 mm away from each other.

The same unit Engaged in Combat. Only darkened models may attack. Models with a dashed frame can attack a Character (either C1 or C2). Models with a lighter shade cannot attack at all.

Solitary

Units containing **Solitary** can never join other units, and can never be joined by other models.

Note: if a model has both Solitary and Attached, it cannot be Deployed and is therefore considered a casualty.

Standard Bearer

Standard Bearer is a unit-wide upgrade, normally represented by the presence of a model carrying the unit standard, icon, military insignia, totem, or other similar symbol.

A unit containing a **Standard Bearer** adds +1 to the Combat Score of its side.

*Note: **Standard Bearer** interacts with **Captain**.*

Stand Behind

Attachable Models with **Stand Behind** are not required to have their Front Facing as far forward as possible within their unit *this generally means that the model can be positioned anywhere within its unit.*

This rule cannot be used while the model has a **Mismatching Base** to its unit.

Strider

If **Strider** is associated with a specific type of Terrain, which would be indicated in brackets ('X'). In such cases, **Strider** only affects the unit's interaction with this Terrain Feature.

Models with **Strider** may ignore rules associated with Terrain Features, with the following exceptions:

- They cannot ignore any rule affecting Line of Sight or Cover.
- They cannot ignore any rule associated with **Weakness**.
- They cannot ignore the Impassable rule of Impassable Terrain.

A Health Pool with **Strider** never fulfils the criteria for which models must take Dangerous Terrain Tests due to the associated Terrain Feature (*but still needs to take Dangerous Terrain Tests from other sources, such as Terrain Features not associated with its **Strider** rule, or when making a Flee Move through an enemy unit*).

In addition, if the unit contains a Rank-and-File model with **Strider**, it ignores the **Disruptive** rule of any Terrain Feature associated to its **Strider** rule.

Stubborn

When a unit containing **Stubborn** loses a Round of Combat, halve the penalty to its Discipline from the Combat Score difference, rounding fractions up (*i.e. towards a larger modifier*).

If the unit is also **Steady**, the modifier is first set to no smaller than -2 (following the **Steady** rules), and then halved, rounding up, to -1.

If the unit is **Unstable**, the Health Point losses due to **Unstable** are halved, rounding fractions up (*i.e. towards more Health Point losses*).

Supernal

When a unit entirely with **Supernal** fails a Break Test, instead of being Broken and subsequently **Shaken**, it suffers a number of Health Point losses equal to the amount by which the combat was lost (*with no saves of any kind allowed*). These Health Point losses are first allocated towards Rank-and-File models, and once enough Health Points losses are suffered to remove all Rank-and-File models, any remaining Health Point losses are allocated by the owner towards Attachable Models, as evenly as possible.

Attachable Models with **Supernal** can only join units containing **Supernal**, and units containing **Supernal** can only be joined by Attachable Models with **Supernal**.

Swiftstride

Rolls for Charge Range, Flee Distance and Pursue Distance by units entirely with **Swiftstride** gain **Maximised**.

Terror

When a unit containing **Terror** declares a Charge in the Charge Phase, the target must take a **Panic Test**. If the test is failed, the unit must choose **Flee! as its Charge Reaction** if allowed to do so (*e.g. not already Engaged in Combat, etc.*).

Units containing **Terror** are themselves immune to the effects of **Terror**.

Undead

Units containing **Undead** can perform **March Moves** only if they benefit from a friendly model's **Commanding Presence**. For this purpose, any **Reform Move** exceeding a unit's Mobility count as a March Move.

Moreover, models with **Undead** have an additional characteristic called 'Resurrect (Rsr)' on their statline, which can interact with some other game effects.

Unruly

Command Tests taken by a unit containing this rule gain **Maximised**.

Unstable

Whenever a unit entirely with **Unstable** would take a Break Test, it suffers instead a number of Health Point losses equal to the amount by which the Combat was lost (*with no saves of any kind allowed*). These Health Point losses are first allocated towards Rank-and-File models, and once enough Health Points losses are suffered to remove all Rank-and-File models, any remaining Health Point losses are allocated by the owner towards Attachable Models, as evenly as possible. Those Health Point losses can be reduced in the following ways:

1. If the unit contains **Stubborn**, the Health Point losses are halved, rounding fractions up.
2. If the unit is affected by **Beacon of Courage**, the Health Point losses are reduced by 1.
3. If the unit is **Steady** while affected by **Beacon of Courage**, the Health Point losses are reduced by an additional 1.
4. If the unit is **Solid** while affected by **Beacon of Courage**, the Health Point losses are reduced by an additional 1.

*I.e. a unit that is affected by **Beacon of Courage** while also being **Steadfast** reduces its Health Point losses by a total of 3.*

Attachable Models with **Unstable** can only join units containing **Unstable**, and units containing **Unstable** can only be joined by Attachable Models with **Unstable**.

Vanguard (X" Mob)

After Deployment, units entirely with **Vanguard** may perform a pre-game **Reform, Advance, or March Move**, called a 'Vanguard Move', with the following exceptions:

- If a value 'X' is given, the units Mobility is **always** X during the Vanguard Move otherwise use the units Mobility.
- No model can move further than 12" during the Vanguard Move, regardless of its Mobility.
- The unit cannot end the Vanguard Move within 6" of an enemy unit.
- Attachable Models cannot leave a unit as part of the Vanguard Move.

If both players have units entirely with **Vanguard**, they alternate moving their units one by one, starting with the unit the Defender has given **Vanguard (3" Mob)** to.

A unit that starts the game outside its own Deployment Zone cannot declare a Charge in the first Player Turn of the first Game Turn.

War Platform

The model follows the rules for Attachable Models, with the following exceptions:

- It can never perform **Make Way** moves (*not even if it is also a Character*).
- Ranged Attacks and **Special Attack** allocated onto a unit with a War Platform joined to it can only target the War Platform if there are fewer than 5 Rank-and-File models (or fewer than 3 if they are of Height 3–5) in the unit. (*If there are no Rank-and-File models in the unit, ignore this rule.*)
- Any given unit can never contain more than a single model with **War Platform** at a time.

When the model is joined to a unit, its Mobility and Charge Speed is **set** to that of its unit, with the following exceptions:

- If there are no Rank-and-File models from the unit in contact with the War Platform's flank Facings (right and left side), the model must use its own Mobility and Charge Speed instead. *Meaning that, if slower than the unit, the unit's Mobility and Charge Speed are **set** to those of the **War Platform**.*
- The **War Platform** cannot use the unit's Mobility and Charge Speed values when leaving the unit (including Charging out of it). Instead, it uses its own Mobility and Charge Speed.

Weakness

Attacks allocated against the model's **Health Pool** must reroll failed to-wound rolls.

If **Weakness** is associated with an Attack Attribute, Property or Rule, which would be indicated in brackets ('X'), it only applies against attacks with the indicated Attack Attribute or made by a model with the indicated Property or Rule.

Wizard Adept

The model becomes a Wizard, gains **Channel (1)**, and knows **3** different **Learned Spells**, chosen from the Apprentice Spell and the Adept Spells (**#1** – **#4**) of the Magic Path it has chosen.

It may Swap Spells during Pre-game Selections. See the 'Battle Preparation' chapter for details.

Wizard Apprentice

The model becomes a Wizard, knows **1 Learned Spell**, which is the Apprentice Spell (**#1**) of the Path it has chosen.

It may Swap Spells during Pre-game Selections. See the 'Battle Preparation' chapter for details.

Wizard Conclave (X)

The unit knows **X** different **Learned Spells**, chosen from the list of available spells in its unit entry, is a Wizard and, if 'X' is 2 or more, it also gains **Channel (1)**.

The unit may only do a Hereditary Swap if it could have picked the Hereditary Spell during Spell Selection (as part of Pre-game Planning), however it is still eligible for a Universal Swap. *See the 'Battle Preparation' chapter for details.*

Even though the spells are known to the whole unit, only one model is a Caster: every time you cast the spell, just before choosing the targets, select one Rank-and-File model as the Caster for this spell.

If a Wizard Conclave suffers a Miscast, treat the entire unit as the Caster.

For the purpose of Primary and Secondary Objectives treat the entire unit as a Caster.

Wizard Master

The model becomes a Wizard, gains **Channel (2)** and knows **5** different **Learned Spells**, chosen from the Apprentice Spell, the Adept, and Master Spells (**#1** – **#6**) of the Magic Path it has chosen.

It may Swap Spells during Pre-game Selections. See the 'Battle Preparation' chapter for details.

5 Melee Weapons

Name	Characteristics Modifiers	Model Rules
Innate Weapons All model parts with <i>Beast</i> , <i>Construct</i> , or <i>Mount</i> come equipped with Innate Weapons as their default equipment and cannot lose them.	–	During Combat Choices a model part can only choose Innate Weapons if it has no other options.
Hand Weapon All model parts without Innate Weapons come equipped with a Hand Weapon as their default equipment and cannot lose it.	–	During Combat Choices a model part can only choose a Hand Weapon if it has no other options, or is a Weapon Master . Models with a Shield using a Hand Weapon gain Parry .
Great Weapon	+2 Str, +2 AP, always Agi 0	Two-Handed
Halberd	+1 Str, +1 AP	Two-Handed
Lance Only models with <i>Centauroid</i> or <i>Mount</i> can use a Lance.	Devastating Charge (+2 Str, +2 AP, +1 Agi)	–
Light Lance Only models with <i>Centauroid</i> or <i>Mount</i> can use a Light Lance.	Devastating Charge (+1 Str, +1 AP)	–
Paired Weapons	+1 Att, +1 Off	Two-Handed. Attacks made with Paired Weapons ignore Parry .
Spear Models with <i>Centauroid</i> or <i>Mount</i> cannot use a Spear.	+1 Agi, +1 AP, and +1 additional AP towards <i>Centauroid</i> or <i>Mount</i>	Fight in Extra Rank

Table 1: Melee Combat Weapons

6 Shooting Weapons

Name	Range	Shots	Str	AP	Attack Attributes
Bow	24"	1	3	0	Shoot in Extra Rank.
Longbow	30"	1	3	0	Shoot in Extra Rank.
Crossbow	30"	1	4	1	Unwieldy (1).
Handgun	24"	1	4	2	Unwieldy (1).
Pistol	12"	1	4	2	Quick to Fire, Stand and Shoot.
Throwing Weapons	8"	2	User	User	Accurate, Quick to Fire, Stand and Shoot.
Breath Attack (X)	8"	2D6	X	X	One use only. Automatic Hits, March and Shoot, Unmodifiable. The Strength, Armour Penetration, and additional Attack Attributes are defined in brackets ('X').

Table 2: Shooting Weapons

7 Attack Attributes

Accurate – Shooting

An attack with **Accurate** does not suffer the -1 to-hit modifier for shooting at 'Long Range'.

Area Attack (XxY)

Before making a Shooting Attack with **Area Attack**, determine the attack's **Target Facing** using the same rules as for Cover.

- If the attack hits in the *Front* or *Rear*: select up to Y different *ranks* of the target.
- If the attack hits in the *Flank*: select up to Y different *files* of the target.

For each rank or file chosen this way, the unit takes X hits, up to a maximum equal to the number of models in that rank or file.

An **Area Attack** can not cause more hits than the total models in the unit, and no single model can suffer more than one hit from each **Area Attack**.

Remember that attacks multiplied into several hits are allocated after establishing how many hits are scored (i.e. after the attack has hit).

Figure 16 illustrates different variations of **Area Attack**.

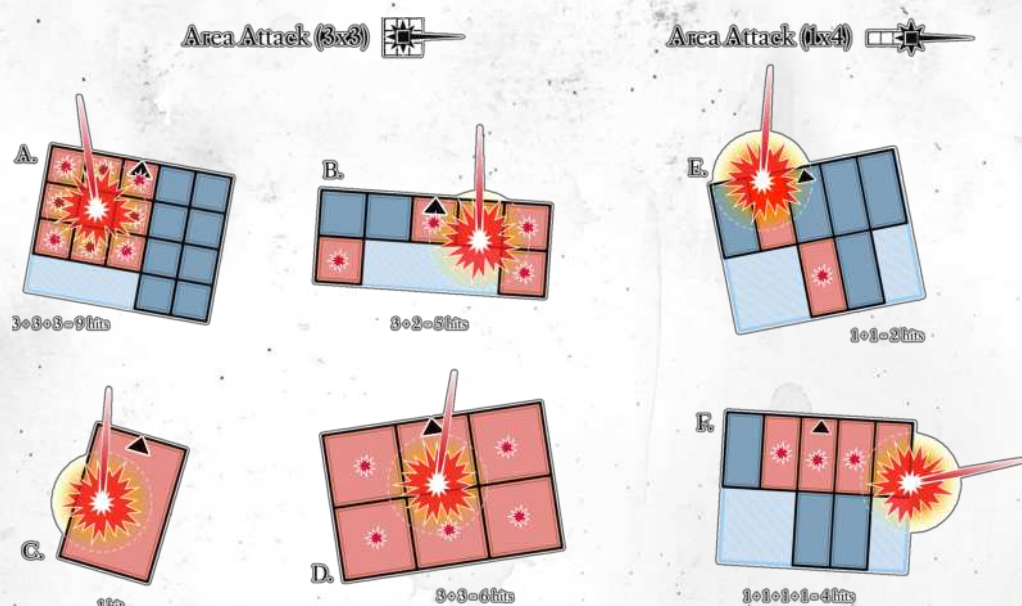

Figure 16: Examples of Area Attacks.

Units A to D are hit by an **Area Attack (3x3)** that has their Front as its Target Facing.

A: There are 3 ranks with more than 3 models. Number of hits: $3 + 3 + 3 = 9$.

B: The first rank has more than 3 models, but the second rank only has 2 models. There is no third rank. Number of hits: $3 + 2 = 5$.

C: Since there is only a single model, there will always only be a single rank with a single model. Number of hits: 1.

D: The first and second rank have 3 models. There is no third rank. Number of hits: $3 + 3 = 6$.

Units E and F are hit by an **Area Attack (1x4)**.

E: The attack has the Front of the unit as its Target Facing. The first and second rank have more than 1 model. There is no third or fourth rank. Number of hits: $1 + 1 = 2$.

F: The attack has the Flank of the unit as its Target Facing. There are more than 4 files with 1 or more models. Number of hits: $1 + 1 + 1 + 1 = 4$.

Artillery – Shooting

An attack with **Artillery** ignores to-hit modifiers from Cover.

In addition, it gains +1 to-hit when shooting at units that are **Solid**, have Height 5, or both.

Automatic Hits

An attack with **Automatic Hits** does not roll to hit, but **always** hits automatically.

This rule is shortened to 'Auto' when used as a weapon's Aim.

Crush Attack

When a model part with **Crush Attack** allocates its attacks in Combat, it may choose to exchange all of its Standard Melee Attacks for a single Standard Melee Attack, which has its Strength and Armour Penetration both **set** to 10 and gains **Multiple Wounds (D3)**. This cannot be done as a **Restricted Attack**.

Devastating Charge – Cumulative

A **Charging** model part with **Devastating Charge**, or using a weapon with **Devastating Charge**, gains the Rules and Characteristic modifiers stated in brackets.

*For example, a model part with **Devastating Charge (+1 Str)** gains +1 Str when Charging.*

Direct Hit (X) – Shooting

When an attack with **Direct Hit** hits, after determining the number of hits (e.g. in the case of **Area Attack**), a single hit, chosen by the attacker, gains the Rules and Characteristic modifiers stated in brackets.

*If a Strength and/or Armour Penetration is given directly, set the attack's Strength and/or Armour Penetration to that value (for example, **Direct Hit (Str 10, AP 6)** means one hit from that attack has its Strength **set** to 10 and its Armour Penetration **set** to 6.*

Divine Attacks

Aegis Saves cannot be taken against **Divine Attacks**.

Elven Finesse

A model part with this Attack Attribute attacking with a Great Weapon strikes at -1 Agility instead of **always** at Agility 0.

Extra Support (X) – Cumulative

A model part with **Extra Support** replaces the limit on the maximum number of attacks the model can do as **Restricted Attack** with the value in brackets ('X') or, if it includes a '+', increases that limit with +X.

Fight in Extra Rank – Cumulative

A model part with **Fight in Extra Rank**, or using a weapon with **Fight in Extra Rank**, can make **Supporting Attacks** from one additional rank.

First Strike

During its **First Round of Combat**, any model part with **First Strike**, or using a weapon with **First Strike**, gains the Rules and Characteristic modifiers stated in brackets.

*For example, a model part with **First Strike (+1 Str)** gains +1 Str in its First Round of Combat.*

Flaming Attacks

Regeneration Saves cannot be taken against **Flaming Attacks**.

Fury

If the attack hits with a to-hit roll of '6', it causes one additional hit (*usually this means it causes two hits instead of one*). This additional hit is allocated towards the same target.

Grind Attack – Special Attack

A model part with a **Grind Attack** can make a **Special Attack** which is resolved at the model part's Agility, and inflicts X hits, using the model part's Strength, Armour Penetration, and Attack Attributes, but not Weapons.

Remember that attacks multiplied into several hits are allocated after establishing how many hits are scored (i.e. after the attack has hit).

Hand-and-a-Half

The model part ignores **Two-Handed**, and its weapons count as a Hand Weapon for the purpose of **Shield** (*while keeping other rules and modifiers*).

Hatred

An attack with **Hatred** must reroll failed to-hit rolls.

Impact Hits – Special Attack

If Charging, the model part can make a **Special Attack** which is resolved at Agility Step 10, and inflicts X hits, using the model part's Strength, Armour Penetration, and Attack Attributes, but not Weapons.

*Remember that attacks multiplied into several hits are allocated after establishing how many hits are scored (i.e. after the attack has hit). If more than one model part of a combined model has **Impact Hits**, only a single model part (chosen by the model's owner) can perform its **Impact Hits** in a Round of Combat.*

Lethal Strike

If an attack with **Lethal Strike** wounds with a to-wound roll of '6', its Armour Penetration is **always** 10, and **Regeneration** Saves cannot be taken against it.

Lightning Attacks

Lightning Attacks must reroll failed to-wound rolls towards models **without** **Metal Armour**.

Magical Attacks

This Attack Attribute does not confer any direct effects, but instead interacts with other rules, such as **Aegis (X, against Magical Attacks)**.

March and Shoot – Shooting

Performing a March Move in the same Player Turn does not prevent shooting with attacks or model parts that have **March and Shoot**. (The attack can still suffer -1 to hit for **Moving and Shooting**).

Multiple Wounds (X)

Health Point losses caused by the attack are multiplied into the value given in brackets ('X'). If the value is a dice, roll one dice for each unsaved wound from an attack with **Multiple Wounds**.

The number of Health Point losses that the attack is multiplied into can never be higher than the Health Points Characteristic of the target (excluding Health Points lost previously in the battle).

For example, if an attack with **Multiple Wounds (D6)** wounds a unit of Trolls (HP 3) and rolls a '5' for the multiplier, the number of Health Points lost is reduced to 3, even if the Troll unit has already lost one or two Health Points previously in battle.

Poison Attacks – Cumulative

Whenever an attack with **Poison Attacks** hits with a to-hit roll of '6', it wounds automatically (*no to-wound roll needed*). If the attack has two or more instances of **Poison Attacks**, it wounds automatically on a successful to-hit roll of '5' or '6' instead.

If the attack is turned into more than one hit (e.g. a hit with **Area Attack** or **Fury**), only a single hit, chosen by the attacker, wounds automatically. All other hits must roll to wound as normal.

Press of Ranks

An attack with **Press of Ranks** gains +1 to wound, to a maximum of 3+.

Psychic Attacks

When rolling to wound with a **Psychic Attack**, replace the target's Resilience with its Discipline.

Quick to Fire – Shooting

An attack with **Quick to Fire** does not suffer the -1 to-hit modifier for **Moving and Shooting**.

Rage

Whenever the model loses a Health Point, it gains +1 Att.

Whenever it **Recovers** or **Raises** a Health Point, it suffers -1 Att.

Shoot in Extra Rank – Shooting, Cumulative

A model part with **Shoot in Extra Rank** may use Shooting Attacks from one additional rank.

Normally, this means that it will be able to make Shooting Attacks from the third rank.

Stand and Shoot – Shooting

A model part with **Stand and Shoot** may perform an out of sequence Shooting Attack, when an enemy unit successfully performs a Charge Move that brings it in contact with the model part's unit, if the following conditions are met:

- The model part's unit is not Engaged in Combat with any other units.
Note: this means that during a Combined Charge, only the first Charging Unit moved can be targeted, except if the Charging Unit is removed at the end of its move. As long as the Charging Unit is removed at the end of its move, there is no limit on the amount of times a unit can Stand and Shoot.
- The enemy unit Charges the model part's unit in its Front Facing.
- The enemy unit started the Charge further away than its Charge Speed (using the lowest Charge Speed in the unit.)
- The Charge was not done as part of a Pursue Move.

This is a Shooting Attack that does not require Line of Sight, can be done even if the enemy unit is not in the shooter's Front Arc, and is always resolved against the target unit's (i.e., the Charging unit's) Front Facing.

Stomp Attack – Special Attack

A model part with **Stomp Attack** can make a **Special Attack** which is resolved at Agility Step 0, can only be allocated towards a **Health Pool** of Height 0-1, and inflicts X hits, using the model part's Strength, Armour Penetration and Attack Attributes, but not Weapons. If more than one model part of a combined model has **Stomp Attack**, only a single model part (chosen by the model's owner) can perform its **Stomp Attack** in each Round of Combat.

Sweeping Attack

When a model with **Sweeping Attack** is within 1" of an Unengaged enemy unit during a **Move Manoeuvre** (even temporarily), the model's unit may perform a **Sweeping Attack** against that enemy unit. This can only be used once per friendly Player Turn.

Resolve the **Sweeping Attack** when the Move Manoeuvre is completed. The attack hits automatically, and counts as a Ranged Attack.

Each model part in the unit with **Sweeping Attack** must use it towards the same enemy unit. The attack causes X hits, resolved with the model part's Strength, Armour Penetration and Attack Attributes, but not Weapons.

If values for Strength, Armour Penetration and additional Attack Attributes are defined in the bracket ('Y'), these are used instead. In this case, the **Sweeping Attack** is **Unmodifiable**.

Toxic Attacks

An attack with **Toxic Attack** always has Strength 3, Armour Penetration 10, and **Unmodifiable**.

Two-Handed

A model part using a **Two-Handed** Melee Weapon cannot simultaneously **use a Shield** against Melee Attacks (unless it has **Hand-and-a-Half**).

Unmodifiable

Attacks and Attack Attributes with **Unmodifiable** are **never** affected by spells, Magic Items or other Model Rules located on friendly models, unless explicitly stated otherwise.

Unwieldy (X)

If the model performed a **Move Manoeuvre** in the current Player Turn, any attacks it makes that have **Unwieldy** suffer -X to hit. This modifier can be combined with the -1 to-hit modifier from **'Moving and Shooting'**.

Weapon Master

The model part may choose what Melee Weapon to use in each Round of Combat, instead of only in the First Round of Combat.

In addition, it may choose to use a Hand Weapon or Innate Weapons even if it has other Melee Weapons. If armed with an Enchanted Weapon, it must still use it (i.e. it only needs to conform to the **Priority 1** of weapon choice).

All Rank-and-File models in a unit still need to choose the same weapon.

Zeal

An attack with **Zeal** must reroll failed to-wound rolls.
